Ventilation of Buildings H.B. Awbi,2004-06-02 Hazim Awbi's Ventilation of Buildings has become established as the definitive text on the subject This new thoroughly revised edition builds on the basic principles of the original text drawing in the results of considerable new research in the field A new chapter on natural ventilation is also added and recent developments in ventilation concepts and room air distribution are also considered The text is intended for the practitioner in the building services industry the architect the postgraduate student undertaking courses or research in HVAC building services engineering or building environmental engineering and the undergraduate studying building services as a major subject Readers are assumed to be familiar with the basic principles of fluid flow and heat transfer and some of the material requires more advanced knowledge of partial differential equations which describe the turbulent flow and heat transfer processes of fluids The book is both a presentation of the practical issues that are needed for modern ventilation system design and a survey of recent developments in the subject **Dynamic Geotechnical Testing** ,1978 **Dynamic Aspects of Detonations** A. L. Kuhl,1993 **Dynamics of Internal Layers and Diffusive Interfaces** Paul C. Fife,1988-01-01

Interfacial phenomena are commonplace in physics chemistry biology and in various disciplines bridging these fields They occur whenever a continuum is present which can exist in at least two different chemical or physical states and there is some mechanism which generates or enforces a spatial separation between these states The separation boundary is then called an interface In the examples studied here the separation boundary and its internal structure result from the balance between two opposing tendencies a diffusive effect which attempts to mix and smooth the properties of the material and a physical or chemical mechanism which works to drive it to one or the other pure state This volume is unique in that the treatment of flames as well as internal layer dynamics including curvature effects is more detailed and systematic than in publications

Chemical contaminants and other forms of indoor pollution have recently raised serious concern among occupational and environmental health workers architects and engineers and the Environmental Protection Agency and the Occupational Safety and Health Administration Microbial pollutants in the home pose major health risks to adults children and particularly the immuno suppressed while sick building syndrome is a reality for many office workers This timely book presents an interdisciplinary exploration of these problems by examining the effects of modern energy efficient architecture on levels of microbial contamination in air and water supplies With the common goal of constructing a microbiologically safe environment the contributors represent the disciplines upon whose combined efforts a solution depends systems engineering medicine microbiology environmental hygiene and architecture Among the topics considered are methods of contamination control in heating ventilation and air conditioning systems the microbiologist s role and the techniques used in evaluating the hygienic environment and assessment of water systems used in health care facilities Proposing methods for the elimination of the health problems discussed the contributors stress the need for assessment of architectural design and subsequent preventive maintenance of buildings and their intricate heating and ventilating systems and they show how poor building design and location affects it occupants Architectural Design and Indoor Microbial Pollution provides public health professionals microbiologists and architects with an authoritative resource for assuring our comfort and safety in the hospitals homes and workplaces we inhabit

Dynamic Modeling and Predictive Control in Solid Oxide Fuel Cells Biao Huang, Yutong Qi, A. K. M. Monjur Murshed, 2013-01-25 The high temperature solid oxide fuel cell SOFC is identified as one of the leading fuel cell technology contenders to capture the energy market in years to come However in order to operate as an efficient energy generating system the SOFC requires an appropriate control system which in turn requires a detailed modelling of process dynamics Introducing state of the art dynamic modelling estimation and control of SOFC systems this book presents original modelling methods and brand new results as developed by the authors With comprehensive coverage and bringing together many aspects of SOFC technology it considers dynamic modelling through first principles and data based approaches and considers all aspects of control including modelling system identification state estimation conventional and advanced control Key features Discusses both planar and tubular SOFC and detailed and simplified dynamic modelling for SOFC Systematically describes single model and distributed models from cell level to system level Provides parameters for all models developed for easy reference and reproducing of the results All theories are illustrated through vivid fuel cell application examples such

as state of the art unscented Kalman filter model predictive control and system identification techniques to SOFC systems The tutorial approach makes it perfect for learning the fundamentals of chemical engineering system identification state estimation and process control It is suitable for graduate students in chemical mechanical power and electrical engineering especially those in process control process systems engineering control systems or fuel cells It will also aid researchers who need a reminder of the basics as well as an overview of current techniques in the dynamic modelling and control of SOFC
