Airborne Particles:

Airborne Particles in Museums The Getty Conservation Institute, 1993-11-04 This study represents the latest in a series of research activities aimed at a better understanding of the origin and fate of air pollution within the built environment Most previous studies of air pollution in cultural institutions have focused on gases Particles were ignored for many reasons they seemed to be more easily removed by the building gaseous air pollutants had been well studied by industry and their effects on commercial products were heavily documented and many particle types were considered chemically benign to almost all surfaces Even carbon black which is now known to pose enormous degradation risks to the optical and color qualities of paintings and tapestries is almost totally inert Recognizing this and understanding that we needed to know much more about the physics of particle intrusion in museum buildings in 1987 the Environmental Engineering Lab at the California Institute of Technology under contract to the Getty Conservation Institute began a detailed examination of five different museums in Southern California These structures represent a diverse range of architectural and ventilation types Through this study a powerful computer model was developed that could predict the soiling effects of changes made to the operation or maintenance of a building This model can even be used to estimate the soiling rates of new buildings or major rehabilitations before any construction work is begun This is an important contribution to both the conservation community and the broader field of air quality science

Airborne Particulate Matter Saurabh Sonwani, Anuradha Shukla, 2022-05-25 This book is about airborne particulate matter sources chemistry and health and contained a complete information about their emission source transport atmospheric chemistry distribution at local regional and global levels and their level in indoor and outdoor settings Primary and secondary particulate matters in the ambient atmosphere also describe in detail Analytical techniques statistical tools and mathematical models used in airborne particulate research is also described This book also covers the important aspects of the particulate matter chemistry in atmosphere and their adverse impact on plant and human health A detailed insight about the harmful impact of airborne particulate matter biogenic and anthropogenic both on different human system is described in detail The toxicological significance of particulate matter on human body was also mentioned The mitigation management and regulatory policies to control ambient particulate matter is also provided This book is also written in simple language with helpful photographs diagrams tables and flowcharts which will make the reader comfortable in understanding the concepts a more relatively easier way Overall the present book is a valuable tool for students working in the fields of Atmospheric Science Environmental Science Biological Sciences Epidemiology and Agriculture Science This book also a unique resource for environmental consultants researchers policymakers and other professionals involved in air quality plant and human health

Analysis of Airborne Particles by Physical Methods Malissa Hanns, 2018-01-18 An accurate and complete characterization of the solid pollutants in air taking into account the physio chemical and technological data available concerning the origin transformation and the effects of dust is a synoptic approach known as SISintegrated dust

analysis and is the underlying concept of this book *Research Priorities for Airborne Particulate Matter* National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Research Priorities for Airborne Particulate Matter, 2004-10-22 In 1997 the U S Environmental Protection Agency EPA established regulatory standards to address health risks posed by inhaling tiny particles from smoke vehicle exhaust and other sources At the same time Congress and the EPA began a multimillion dollar research effort to better understand the sources of these airborne particles the levels of exposure to people and the ways that these particles cause disease To provide independent guidance to the EPA Congress asked the National Research Council to study the relevant issues The result was a series of four reports on the particulate matter research program The first two books offered a conceptual framework for a national research program identified the 10 most critical research needs and described the recommended timing and estimated costs of such research The third volume began the task of assessing initial progress made in implementing the research program This the fourth and final volume gauged research progress made over a 5 year period on each of the 10 research topics The National Research Council concludes that particulate matter research has led to a better understanding of the health effects caused by tiny airborne particles However the EPA in concert with other agencies should continue research to reduce further uncertainties and inform long term decisions **Airborne Particles** National Research Council (U.S.). pressures combined with a realization of the interconnectedness and complexity of environmental systems present new challenges to policymakers and regulators. Scientific research has played and will continue to play an essential part in solving environmental problems. Decisions based on incorrect or incomplete understanding of environmental systems will not achieve the greatest reduction of risk at the lowest cost. This volume describes a framework for acquiring the knowledge needed both to solve current recognized problems and to be prepared for the kinds of problems likely to emerge in the future. Many case examples are included to illustrate why some environmental control strategies have succeeded where others have fallen short and how we can do better in the future.
