relatively young science Interest in this subject however is growing very rapidly and although no agreement has been reached as yet about the exact content and limits of this interdisciplinary discipline there appears to be increasing interest in seeing environmental topics which are based on chemistry embodied in this subject One of the first objectives of Environmental Chemistry must be the study of the environment and of natural chemical processes which occur in the environment A major purpose of this series on Environmental Chemistry therefore is to present a reasonably uniform view of various aspects of the chemistry of the environment and chemical reactions occurring in the environment The industrial activities of man have given a new dimension to Environmental Chemistry We have now synthesized and described over five million chemical compounds and chemical industry produces about hundred and fifty million tons of synthetic chemicals annually We ship billions of tons of oil per year and through mining operations and other geophysical modifications large quantities of inorganic and organic materials are released from their natural deposits Cities and metropolitan areas of up to 15 million inhabitants produce large quantities of waste in relatively small and confined areas Much of the chemical products and waste products of modern society are released into the environment either during production storage transport use or ultimate disposal These released materials participate in natural cycles and reactions and frequently lead to interference and disturbance of natural systems

Nemetz,2022-02-27 Using a cross disciplinary science and economics based approach this book provides a sobering and comprehensive assessment of the multifaceted barriers to achieving sustainability at a global level Organized into three parts the book defines sustainability in part I and sets the context of the historical and current difficulties facing the world today In parts II and III it outlines the sustainability challenges faced in transportation manufacturing and agriculture and then in turn addresses the solutions conditional solutions and nonsolutions to these challenges These include electric and autonomous automobiles nuclear power renewable energy geoengineering and carbon capture and storage The author attempts to differentiate among those proposed solutions and discusses which are most promising and which are infeasible counterproductive and potentially a waste of time and money In each of the book s chapters the scientific evidence is presented in detail in keeping with the advice of the young Swedish climate activist Greta Thunberg to let the science speak for itself The author outlines why sustainability is unlikely to be achieved in several key areas of human endeavor and readers are challenged to weigh the scientific evidence for themselves Using an economic business based approach this book introduces students and general readers to the challenges of sustainability and the environmental difficulties facing humanity today **Bibliography of the History of Medicine** ,1979
