Hollinger,1991      *1990 Focus on Pulmonary Pharmacology and Toxicology* Mannfred A Hollinger,2022-01-06 Published in 1991 Focus on Pulmonary Pharmacology and Toxicology is intended to cover a wide range of topics For example Volume 2 contains chapters dealing with Respiratory Tract Lining fluids Pulmonary Fibrosis Ephysema and Adrenoceptors in airways      **Metabolic Activation and Toxicity of Chemical Agents to Lung Tissue and Cells** T.E. Gram,2013-10-22 Research has shown that the lung is capable of metabolically activating xenobiotics into intermediates that can covalently bind to pulmonary tissue Further it has been shown that the lung consists of many distinct cell types with the ability to take up and sequester metabolically unchanged drugs and chemicals that are ultimately toxic in effect This volume reflects the extent of these developments and provides a state of the art reference in a rapidly evolving field incorporating both drug metabolism and pulmonary toxicology research

Giembycz,2013-03-08 Most studies on autonomic innervation of smooth muscle have focused on the short term mechanisms involved in neurotransmission in physiological and pathophysiological conditions However recent observations of the long term plasticity of this system i e its capacity for regeneration and for compensatory change in pattern of innervation and expression of cotransmitters and receptors in ageing following surgery trauma or in disease have indicated that an understanding of the mechanisms involved could influence the design of therapeutic regimes There is increasing evidence for long term communication between nerves and smooth muscle cells during development and throughout adult life To date the trophic interactions between nerves and airway musculature have attracted little interest consequently much of the information presented here is drawn from studies using other smooth muscles However the questions posed about trophic interactions during development apply as much to airways smooth muscle neuroeffector systems as to other autonomic neuroeffector systems These are i How do developing nerve fibres know where to go and how do they reach their target sites ii What determines the density and pattern of innervation at reaching the effector iii How do the nerves survive and maintain their position once established iv What factors influence neurochemical differentiation such that genetically multipotential neurones are triggered to synthesize one or combinations of neurotransmitters v What influence do nerves have on the structure function and receptor expression of their effector cells vi How do diseases interrupt these processes see 1
