Global Atmospheric-Biospheric Chemistry Ronald G. Prinn,2012-12-06 This volume contains the invited papers and a transcript of

the final panel discussion in the First Scientific Conference of the International Global Atmospheric Chemistry IGAC Project held in Eilat Israel from April 18-22 1993. The conference was hosted by the Israeli Institute for Biological Research IIBR and was the 37th in the prestigious OHOLO Conference series in Israel. The conference was devoted to the subject of Global Atmospheric Biospheric Chemistry and was a landmark event in this area. It provided the first comprehensive report of progress under IGAC toward improving our understanding of the chemical and biological processes that determine the changing composition of the earth's atmosphere. This work is an essential component of the comprehensive International Geosphere Biosphere Program IGBP devoted to measuring and understanding global changes in the past and present and predicting the future evolution of our planet. I want to devote this brief foreword to thanking several people who worked especially hard to make the conference a success and who helped to produce this volume as a record of the event. Paul Crutzen, Amram Golombek, Pamela Matson, and Henning Rodhe did sterling service on the conference organizing committee. Special thanks go to Amram Golombek and Dr. Cohen, the Director of IIBR, who hosted the event in Israel. Anne Slinn did an excellent job in producing the Abstract book and helping with administrative matters. Alex Pszenny helped capably to critically review the Abstracts.

Space Technology Export Controls and International Cooperation in Outer Space

Michael Mineiro, 2011-11-08. Export controls definitively impact international cooperation in outer space. Civil and commercial space actors that engage in international endeavors must comply with space technology export controls. In the general discourse, members of the civil and commercial space community have an understanding of their domestic export control regime. However, a careful reading of the literature on space technology export controls reveals that certain questions relevant to international engagements have not been identified or answered. What is the legal/political origin of space technology export controls? How do they relate to the current international legal structure? What steps can be taken to evolve our current unilateral paradigm of space technology within the context of peaceful exploration and use of outer space? In this book, these and other relevant questions on space technology export controls are identified and assessed through an insightful case study of the U.S. commercial communication export control regime. The findings of this case study are used in an international legal/political analysis of international space law, public international law, and international cooperation. Breaking new ground in international legal theory, a self-justified security dilemma that is manifest in international law is identified and explained as the origin for the current paradigm of space technology export controls.
