Patent Office, 1972 Boron and Refractory Borides G.V. Samsonov, V.I. Matkovich, P. Hagenmuller, T. Lundstrom, 2012-12-06 V I MATKOVICH During the meeting of the International Symposium on Boron held in October 1972 in Tbilisi U S S R the idea was proposed to assemble a review of boron and refractory borides by the specialists present The

advantages of such a work were immediately apparent Such diverse applications of borides as in protective armor nuclear reactors coat ings reinforcement etc can hardly all be presented in sufficient detail by a single author On the other hand it was also recognized that with so much specialization some areas of interest may not be covered Within the last decade or two a number of areas have been developed in which the use of refractory borides is growing and improvements are being actively explored Thus a number of borides have considerable potential as reinforcing material for plastics or light metals though only boron fibers have been firmly established up to the present Ap plication of flakes and films for two dimensional reinforcement appears attractive although the high cost of materials and development represents a considerable barrier A number of borides have been used to manufacture lightweight protective armor In this area relatively fast changes seem to be taking place as improvements in performance and weight are made Boron carbide has found considerable use in this application and new developments exploit the light weight of beryllium borides **Index of Patents Issued from the United States Patent Office** United States. Pittman, Martel Zeldin, 2007-12-19 This important work is based on the editors symposium at the 2005 ACS meeting in Washington DC The contents include an emphasis on main group polymers including boron The chapters are not simply journal articles but have real added value as the editors have reviewed the general area by placing the work into a larger perspective This book will be required reading for scientists in a number of disciplines including chemical engineers and physics researchers Art and Ocean Objects of Early Modern Eurasia Anna Grasskamp, 2025-10-01 During the early modern period objects of maritime material culture were removed from their places of origin and traded collected and displayed worldwide Focusing on shells and pearls exchanged within local and global networks this monograph compares and connects Asian in particular Chinese and European practices of oceanic exploitation in the framework of a transcultural history of art with an understanding of maritime material culture as gendered Perceiving the ocean as mother of all things as womb and birthplace Chinese and European artists and collectors exoticized and eroticized shells shapes and surfaces Defining China and Europe as spaces entangled with South and Southeast Asian sites of knowledge production source and supply between 1500 and 1700 the book understands oceanic goods and maritime networks as transcending and subverting territorial and topographical boundaries It also links the study of globally connected port cities to local ecologies of oceanic exploitation and creative practices
