Craters Cosmos And Chronicles A New Theory Of Earth:

Craters, Cosmos, and Chronicles H. R. Shaw, 1994 Climate Change and the Course of Global History John L. Brooke, 2014-03-17 The first global study by a historian to fully integrate the earth system approach of the new climate science with the material history of humanity *The End of the Dinosaurs* Charles Frankel, 1999-09-23 The End of the Dinosaurs gives a detailed account of the great mass extinction that rocked the Earth 65 million years ago and focuses on the discovery of the culprit the Chicxulub impact crater in Mexico It recounts the birth of the cosmic hypothesis the controversy that preceded its acceptance the search for the crater its discovery and ongoing exploration and the effect of the giant impact on the biosphere Other mass extinctions in the fossil record are reviewed as is the threat of asteroids and comets to our planet today The account of the impact and its aftermath is suitable for general readers The description of the crater geology is in enough detail to interest students of the earth sciences A detailed index and bibliography are included The Natural History of Earth Richard John Huggett, 2006-09-27 Using a broad selection of classic and current sources The Natural History of the Earth probes selected discussions within biology climatology geology and geomorphology and explores a selection of debates about Earth and life history considering their origins and their present state of play After outlining the arguments placing them in an historical context and indicating their significance the book goes on to deal with specific debates In the geosphere section topics covered include geological processes the bombardment hypothesis frigid climates and cataclysmic floods and in the section concerning the biosphere the topics covered include evolutionary patterns mass extinctions patterns in life s history and life environment connections Written in a clear and accessible style this volume will interest Earth and life scientists physical geographers and any informed person fascinated by long term Earth history This accessible volume is illustrated throughout with over fifty informative diagrams photographs tables and over 700 references

The Cretaceous-Tertiary Event and Other Catastrophes in Earth History Graham Ryder, David E. Fastovsky, Stefan Gartner, 1996-01-01 This volume attempts to explore and clarify the relationship among the geological records the extinctions and the causes of catastrophes for life in Earth s history Most of the papers address the geological record and the extinctions across the Cretaceous-Tertiary boundary and the buried Chicxulub structure that is now consensually deemed to be of impact origin and to be intimately related to that boundary GSA website **Catastrophism** Richard J. Huggett, 1997 One of the most dramatic intellectual events of the last decade has been the stunning re emergence of the catastrophist paradigm in the biological and earth sciences From killer asteroids to emergent viruses it has become evident that the history of life on earth has been shaped far more than previous orthodoxies would allow by extreme events and non linear processes The old uniformitarian dogma of steady rate evolution has been decisively challenged by the research of contemporary neo catastrophists like Stephen Jay Gould David Raup Stuart Ross Taylor Ursula Marvin and Kenneth Hsu Whether debating the origin of the moon or the current human impact on the biosphere they urge us to recognize the radically event or chance

driven structure of natural history Surveying these various theories of uniformitarian and neo catastrophist thought in a clear and accessible fashion and seeking a path towards a new and workable synthesis Richard Hugget provides a superb introduction to the ideas which have defined the way we look at the world Impact! Gerrit L. Verschuur, 1997-12-18 Most scientists now agree that some sixty five million years ago an immense comet slammed into the Yucatan detonating a blast twenty million times more powerful than the largest hydrogen bomb punching a hole ten miles deep in the earth Trillions of tons of rock were vaporized and launched into the atmosphere For a thousand miles in all directions vegetation burst into flames There were tremendous blast waves searing winds showers of molten matter from the sky earthquakes and a terrible darkness that cut out sunlight for a year enveloping the planet in freezing cold Thousands of species of plants and animals were obliterated including the dinosaurs some of which may have become extinct in a matter of hours In Impact Gerrit L Verschuur offers an eye opening look at such catastrophic collisions with our planet Perhaps more important he paints an unsettling portrait of the possibility of new collisions with earth exploring potential threats to our planet and describing what scientists are doing right now to prepare for this awful possibility Every day something from space hits our planet Verschuur reveals In fact about 10 000 tons of space debris fall to earth every year mostly in meteoric form The author recounts spectacular recent sightings such as over Allende Mexico in 1969 when a fireball showered the region with four tons of fragments and the twenty six pound meteor that went through the trunk of a red Chevy Malibu in Peekskill New York in 1992 the meteor was subsequently sold for 69 000 and the car itself fetched 10 000 But meteors are not the greatest threat to life on earth the author points out The major threats are asteroids and comets The reader discovers that astronomers have located some 350 NEAs Near Earth Asteroids objects whose orbits cross the orbit of the earth the largest of which are 1627 Ivar 6 kilometers wide and 1580 Betula 8 kilometers Indeed we learn that in 1989 a bus sized asteroid called Asclepius missed our planet by 650 000 kilometers a mere six hours and that in 1994 a sixty foot object passed within 180 000 kilometers half the distance to the moon Comets of course are even more deadly Verschuur provides a gripping description of the small comet that exploded in the atmosphere above the Tunguska River valley in Siberia in 1908 in a blinding flash visible for several thousand miles every tree within sixty miles of ground zero was flattened He discusses Comet Swift Tuttle the most dangerous object in the solar system a comet far larger than the one that killed off the dinosaurs due to pass through earth s orbit in the year 2126 And he recounts the collision of Comet Shoemaker Levy 9 with Jupiter in 1994 as some twenty cometary fragments struck the giant planet over the course of several days casting titanic plumes out into space when Fragment G hit it outshone the planet on the infrared band and left a dark area at the impact site larger than the Great Red Spot In addition the author describes the efforts of Spacewatch and other groups to locate NEAs and evaluates the idea that comet and asteroid impacts have been an underrated factor in the evolution of life on earth Astronomer Herbert Howe observed in 1897 While there are not definite data to reason from it is believed that an encounter with the nucleus of one of

the largest comets is not to be desired As Verschuur shows in Impact we now have substantial data with which to support Howe's tongue in cheek remark Whether discussing monumental tsunamis or the innumerable comets in the Solar System this book will enthrall anyone curious about outer space remarkable natural phenomenon or the future of the planet earth

The Mass-Extinction Debates William Glen,1994 This book examines the arguments and behavior of the scientists who have been locked in conflict over two competing theories to explain why 65 million years ago most life on earth including the dinosaurs perished Companion Encyclopedia of Geography Prof Ian Douglas,Ian Douglas,Richard John Hugget,Mike

Robinson,2003-09-01 The Companion Encyclopedia of Geography provides an authoritative and provocative source of reference for all those concerned with the earth and its people Examining both physical and human geography and charting human activities within their habitat up to the present day this Companion also asks what lies in the future A differentiated world A world transformed by the growth of a global economy The global scale of habitat modification A world of questions Changing worlds changing geographies Geographical futures The forty five self contained chapters are bound into a unifying whole by the editors general and part introductions each chapter provides details of the most useful sources of further reading and research and the volume is concluded with a comprehensive index This is an invaluable resource not only for students teachers and researchers in the academic domain but also professionals in interested commercial and public sector organisations Evolution and Ecology K. D. Bennett,1997 Evolutionary synthesis using contribution of recent fossil record to understand mechanisms of macroevolutionary change

Soft Plate and Impact Tectonics Antonio Ribeiro,2012-12-06 Structural geology is a core component of knowledge needed for intelligent living with our planet truly sustainable development It gives me great pleasure to write this brief foreword for the work by Antonio of Lisboa When we consider the foundations of our life support systems climate the biosphere soil materials energy waste management and today in the world of cities structural stability we require exact knowledge of the structure of our planet and change in these structures Homo sapiens has lived on our planet for a very short period Our planet is cooling by conduction and convection and it is the structures that result from these processes that control the global climate our resource base and even soil quality and food security etc etc As the title of this book suggests some processes are slow and some fast I was born on a farm in Southern New Zealand quite close to the magnificent had a profound influence Southern Alps I often think that watching that environment on my mental development *Earth Sciences History*,2004 **Prematurity in Scientific**

Discovery Ernest B. Hook,2002-10-02 For centuries observers have noted the many obstacles to intellectual change in science In a much discussed paper published in Scientific American in 1972 molecular biologist Gunther Stent proposed an explicit criterion for one kind of obstacle to scientific discovery He denoted a claim or hypothesis as premature if its implications cannot be connected to canonical knowledge by a simple series of logical steps Further Stent suggested that it was appropriate for the scientific community to ignore such hypotheses so that it would not be overwhelmed by vast numbers

of false leads In this volume eminent scientists physicians historians social scientists and philosophers respond to Stent's thesis

Dictionary of Scientific Principles Stephen Marvin, 2012-11-27 Dictionary of Scientific Principles presents a unique and timeless collection of almost all known rules or laws commonly called principles identified throughout the history of scientific development their definition and use Exploring a broad range of disciplines the book first lists more than 2 000 principles organized in a standard alphabetical order then provides a list of subject headings for which related principles are identified A staple addition to every library the dictionary will also be of interest to scientists and general readers *New Left Review*, 1960

Transfiguring the Arts and Sciences Jon Klancher, 2013-08-01 In this important and innovative study Jon Klancher shows how the Romantic age produced a new discourse of the Arts and Sciences by reconfiguring the Enlightenment's idea of knowledge and by creating new kinds of cultural institutions with unprecedented public impact He investigates the work of poets lecturers moral philosophers scientists and literary critics including Coleridge Godwin Bentham Davy Wordsworth Robinson Shelley and Hunt and traces their response to book collectors and bibliographers art and science administrators painters engravers natural philosophers radical journalists editors and reviewers Taking a historical and cross disciplinary approach he opens up Romantic literary and critical writing to transformations in the history of science history of the book art history and the little known history of arts and sciences administration that linked early modern projects to nineteenth and twentieth century modes of organizing knowledges His conclusions transform the ways we think about knowledge both in the Romantic period and in our own

Environmental Change Richard Huggett, 2003-09-02 Huggett presents an introductory exploration of past present and future change in the environment Exploring rates and directions of change introduces the interdependent parts of the natural environment

Physical Geography: The Key Concepts Richard John Huggett, 2009-06-26 Physical Geography The Key Concepts is a thought provoking and up to date introduction to the central ideas and debates within the field It provides extended definitions of terms that are fundamental to physical geography and its many branches covering topics such as biogeography ecology climatology meteorology geomorphology hydrology pedology Complete with informative tables diagrams and suggestions for further reading this is a highly accessible guide for those studying physical geography and related courses

Romanticism, History, and the Possibilities of Genre Tiltama Rajan, Julia M. Wright, 1998-02-13 Romanticism has often been associated with the mode of lyric or otherwise confined within mainstream genres As a result we have neglected the sheer diversity and generic hybridity of a literature that ranged from the Gothic novel to the national tale from monthly periodicals to fictionalized autobiography In this volume leading scholars of the period explore the ways in which the Romantics developed genre from a taxonomical given into a cultural category so as to make it the scene of an ongoing struggle between fixed norms and new initiatives Focusing on non canonical writers such as Thelwall Godwin and the novelists of the 1790s or placing authors such as Wordsworth and Byron in a non canonical context these essays explore the psychic and social politics of genre from a variety

of theoretical perspectives while the introduction looks at how genre itself was rethought by Romantic criticism

Governance of Earth Systems R. Boardman, 2010-07-06 Science and politics are closely connected in today's global environmental issues. This book focuses on these links in relation to climate change, the threats to wildlife species and natural hazards and disasters. Study of these reveals the need for more effective international cooperation and the limits of global governance.
