*Guide to Information Sources in Mathematics and Statistics* Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to

support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

*Money in Economic Theory* Hasse Ekstedt, 2013 The financial crash of 2008 showed the fragility of the financial system A key question which surfaced in the aftermath of the global crisis was why economists were unable to predict this crash This new volume argues that this failure can be attributed at least in part to the poor and inconsistent treatment of money and monetary matters in economic theory The book takes this problem as its starting point and from there aims to develop a more consistent treatment of the topic Here Hasse Ekstedt affirms that the treatment of money in economic theory has been inconsistent and that the topic of money can in fact be seen as anomalous He argues that this anomaly depends on deficiencies in the economic theory which through an equilibrium approach mainly perceives money as an index of measurement In contrast this volume puts forward the case for money as a non equilibrium concept and that the stability of money and financial markets are to be sought in social and institutional structures In particular the volume discusses the relationship between the market and public bodies as well as addressing economic and financial stability in general and in relation to the globalized economy particularly focussing on the problem of structural stability In doing so the book offers a new approach both to money and to its role in economic theory
