*A Dictionary of Creation Myths* David Adams Leeming, David Adams (Professor of English and Comparative Literature Leeming, University of Connecticut), 1994      Evolution and Religious Creation Myths : How Scientists Respond Paul F. Lurquin School of Molecular Biosciences Washington State University, Linda Stone Department of Anthropology Washington State University, 2007-06-08 Polls show that 45% of the American public believes that humans were created about 10 000 years ago and that evolution is non existent Another 25% believes that changes in the natural world are directed by a supernatural being with a particular goal in mind This thinking clashes frontally with scientific findings obtained in the past 150 years A large portion of the general public espouses the views of creationists and their descendants and ignores or is unaware of scientific advances Critical thinking about the natural world within a scientific framework is lacking in the USA and many parts of the world This manuscript provides a multidisciplinary explanation and defense for the science of evolution not just Darwinism as it is being challenged by arguments for intelligent design and other creation myths It draws in the life physical and social sciences and recent studies of human evolution that rely much on the idea of change over time which is evolution writ large It puts the evolution ID issue into international perspective by including opinions held in world religions other than Christianity It is clearly written and also can easily be used as a guide for those with some science background The authors make a convincing case that other books do not achieve this as much as they do in this work The book is written for a whole spectrum of educated people including teachers and teachers in training who are interested in the broad issues of the origins of the universe life and humans and who may not quite grasp the potential magnitude of the negative influence on all of science education of people embracing creationist and ID thinking This includes high school teachers and people on boards of education and in municipal governments anyone involved in education It could be used also in college courses such as contemporary social issues and Science and Society sometimes team taught by sociologists and scientists The authors show that when they are teleological dogmatic or politically inspired religious and creation myths threaten scientific efforts The book does not require any extensive knowledge of science The principle of change over time pervades all of science from cosmology to the search for the origin for life to human physical and cultural evolution The book educates readers on scientific matters that overwhelmingly support the idea of evolution not only in the living world but also in physical and social science It explains too how evolution physical and biological is a random unguided process whose roots can be already found in quantum physics      **Creation Myths** Marie-Louise von Franz, 2017-05-09 A leading Jungian scholar analyzes common motifs in creation myths from cultures around the world explaining how they inform the collective unconscious and contribute to our ability to create as human beings Parabola Creation myths are the deepest and most important of all myths because they are concerned with both the basic patterns of existence and the ultimate meaning of life In this book an eminent Jungian analyst examines the recurring motifs that appear in creation myths from around the world and shows what
