fib Bulletin 41 addresses the most common types of imperfections encountered during the manufacture stacking transport and erection of precast concrete structural elements and suggests a number of possible remedial actions The remedial actions depend on the severity of the imperfection the feasibility of repair and the consequences on the intended use of the concrete member Imperfections in concrete structures are impossible to avoid and can range from minor surface blemishes to major structural defects Because many imperfections are at the limits of specified quality deviations or are not included in the acceptance criteria the problem is more complex than a decision between rejection or acceptance This document deals with precast concrete elements that do not meet the quality as intended in the design It compares imperfections in quality to the specified requirements so that the effect of the imperfection can be evaluated Recommendations are provided on methods to prevent such imperfections the effect they can have and any necessary actions for rectification The bulletin applies to prefabricated concrete members made of reinforced or prestressed normal weight concrete Products include beams and columns concrete walls hollow core slabs double tees planks and beams for beam and block floors Water retaining structures are outside the scope of this document **Early-Age and Long-Term Cracking in RC Structures** Fragkoulis Kanavaris, Agnieszka Jędrzejewska, Farid Benboudjema, Miguel Azenha, 2025-08-29 This volume gathers the latest advances innovations and applications in the field of crack control in concrete as presented by leading international researchers and engineers at the International RILEM Conference on Early age and Long term Cracking in RC Structures CRC held in Katowice Poland on September 11 12 2025 It covers early age and long term imposed deformations in concrete analytical formulations for calculating crack widths in concrete numerical simulations of the early age and long term restrained behaviour of concrete elements experimental investigations on cracking on site monitoring of imposed deformations and cracking crack control and influence of binders and admixtures on governing properties relevant to cracking The conference demonstrated that a comprehensive approach to this problem requires the design of robust experimental techniques the development of multiscale models and the evaluation of code based and other analytical approaches relevant to crack control in concrete The contributions which were selected through a rigorous international peer review process share exciting ideas that will spur novel research directions and foster new multidisciplinary collaborations The event follows on from a very successful conference under the same theme in 2021

CRC2021 which was held in Paris ENS Paris Saclay in hybrid format due to Covid 19 measures The CRC2025 conference also served as one of the final events of RILEM TC 287 CCS celebrating the achievements of the TC over the past 6 years
