Handbook of Organic Photochemistry and Photochemistry Angelo Albini, Maurizio Fagnoni, 2010-02-01 Unique in its focus on preparative impact rather than mechanistic details this handbook provides an overview of photochemical reactions classed according to the structural feature that is built in the photochemical step so as to facilitate use by synthetic chemists unfamiliar with this topic An introductory section covers practical questions on how to run a photochemical reaction while all classes of the most important photocatalytic reactions are also included Perfect for organic synthetic chemists in academia and industry

Dynamic Studies in Biology Maurice Goeldner, Richard Givens, 2006-03-06 With contributions by more than 30 expert researchers this handbook covers the whole spectrum from chemistry to cell biology and from theory to application In so doing it deals with a broad range of topics from the chemistry and biophysics of caged compounds to their application in time resolved studies comparing the properties of different caging groups The authors describe in detail light activation of proteins as well as nucleic acids while a special section is devoted to multiphoton phototriggers A must have for every biochemist biophysicist and molecular biologist developing and working with these novel methods

Photochemically-Generated Intermediates in Synthesis Angelo Albini, Maurizio Fagnoni, 2013-07-01 Examines the latest applications of photochemistry to generate important intermediates Presenting the latest breakthroughs in the field of organic photochemistry this book offers tested and proven photochemical approaches to synthesis creating promising new possibilities and applications for photochemical reactions It focuses on photoreactions involving an intermediate where mechanistic aspects control the course of the reaction and its synthetic value Readers will discover new insights into the mechanisms and nature of photo produced reactive intermediates for organic synthesis as well as the methods to generate them Moreover by focusing on highly efficient techniques for producing such species the authors enable researchers to design and perform photoreactions within the framework of green sustainable chemistry

Photochemically Generated Intermediates in Synthesis begins with a discussion of the principles and practice of photo generated intermediates Next the book explores Photogeneration of carbon centered radicals Photogeneration of heteroatom centered radicals Photogeneration of biradicals and radical pairs Photochemical generation of radical ions Photogeneration of carbocations and carbanions Photogeneration of carbenes and nitrenes The book s final chapter is dedicated to the photochemical manipulation of intermediates Each chapter includes key kinetic data for typical intermediates as well as detailed case examples giving readers all the tools needed to perform their own photochemical reactions Comparisons to non photochemical methods are offered whenever possible

Photochemically Generated Intermediates in Synthesis sets the stage for greater collaboration among photochemists and synthetic organic chemists enabling these two research communities to fully leverage photochemistry in order to generate key intermediates needed for a broad range of synthetic reactions in organic chemistry
