

An illustration of a classroom scene. A female teacher with dark hair, wearing a purple sweater and a tan skirt, stands on the left, pointing towards a window. She is holding a blue folder. Four students are seated at a long table. From left to right: a girl with brown hair in a blue shirt, a boy with dark skin and curly hair in an orange shirt with his hand raised, a boy with light skin in a teal striped shirt, and a girl with red hair in a pink shirt. In the foreground, a student in a wheelchair is partially visible, wearing a light blue shirt and orange shoes. The background features a large window with a potted plant on the sill, a bookshelf, and another potted plant on the right.

Reconstruction in Education for Impacting a Sustainable Tomorrow Dr.C.Subbulakshmi, Dr.P.B.Beulahbel Bency , Good quality education is an essential tool for achieving a more sustainable world This was emphasised at the UN World Summit in Johannesburg in 2002 where the reorientation of current education systems was outlined as key to sustainable development Education for sustainable development ESD promotes the development of the knowledge skills understanding values and actions required to create a sustainable world which ensures environmental protection and conservation promotes social equity and encourages economic sustainability The concept of ESD developed largely from environmental education which has sought to develop the knowledge skills values attitudes and behaviours in people to care for their environment The aim of ESD is to enable people to make decisions and carry out actions to improve our quality of life without compromising the planet It also aims to integrate the values inherent in sustainable development into all aspects and levels of learning Education and the future are inseparably intertwined It is impossible to think about educational matters without making references to the future Our understanding of future determines for example what knowledge and which skills are important for the next generation Regarding sustainability issues it makes a difference whether sustainability is thought as a concrete aim which can be reached through technical innovation and efficiency or whether it is more a normative direction which needs to be determined democratically Futures in education determine decisions in the present and thus can be understood as futures for the present If the future is the same as the present or can be predicted with any certainty then it would seem to be not so difficult to decide what the next generation should best be equipped with However if the future is presumed to be uncertain which is ultimately the case then the necessary knowledge and skills are not that easy to determine On closer observation of society and educational practice the described idealized picture of education seems difficult to maintain Especially institutionalized education is far from being free of external influences The promise of a better future has been shattered because of a few severe global crises Future in post modern societies has come to be understood instead as uncertain and contingent
