Antibiotic Discoveries and a Century of Creating Superbugs Doreen E. Szollosi,2023-03-28 In the pre antibiotic era the infections we currently see as relatively minor were sometimes deadly This book discusses the rise and sometimes fall of wonder drugs designed to combat infections for which at the time there was no cure However history has shown us that when antibiotics are overused it can ultimately lead to either widespread discontinuation of the antibiotic or a drastic decrease in efficacy leaving healthcare providers with few or no options for treatment This book explores the discoveries of the major antibiotic drug classes and highlights major bacterial strains which have become resistant and now represent difficult to treat infections Barriers to new antibiotic development as well as novel strategies for treating bacterial infections are also explored

Antibiotic Development and Resistance Diarmaid Hughes, Dan I Andersson, 2001-10-11 The increasing resistance of bacteria towards all current classes of antibiotics is now a serious health problem in both developed and developing countries. *Antibiotic Development and Resistance* presents 15 chapters that explore the medical issues raised by this development and review the relevant literature. The book begins by reviewing the global New Weapons to Control Bacterial Growth Tomas G. Villa, Miguel Vinas, 2016-03-24 Written by specialists in the different fields this book presents new perspectives and insights into strategies and weapons to fight microbial infections. It also reviews the state of the art of alternative treatment approaches and new therapeutic agents to deal with infections caused by multidrug resistant microorganisms. In an era of accumulated resistance to current antibiotics it is vital that this is undertaken without further delay. Aspects discussed include the control of RNA synthesis, the use of bacteriocins or enzybiotics, bacteriophages or purified lysins, the specific control of pathogenic clostridia, the design of new drugs affecting DNA synthesis in bacteria, the use of fecal matter transplant strategies, the specific control of quorum sensing responses in bacteria, the use of new peptides as antibiotics and new ways to control bacteria that cause cancer such as *Helicobacter pylori* cancers. **2020**
