The Intimacy of Images Myriam Lamrani, 2025-05-13 La Santa Muerte becomes a lens for understanding how Oaxacans relate to saints loved ones and other special dead In Oaxaca images of saints and loved ones as well as of victims of political or criminal violence are seemingly everywhere While Oaxacans relate to all sorts of special dead they are particularly devoted to La Santa Muerte Saint Death a female reaper like figure whose popularity has risen in tandem with violence throughout Mexico The Intimacy of Images recontextualizes Oaxacans relationships with their special dead through the lens of La Santa Muerte examining how devotees closely interact with what Lamrani terms intimate images not only devotional effigies but also photographs films tattoos and murals and even dreams and visions Though Mexicans have a well known cultural familiarity with death Lamrani argues that devotion to La Santa Muerte builds upon this intimacy even as it also participates in the production of terror and reflects political and criminal violence Ultimately Lamrani finds that these human image interactions represent more than Catholic devotion they reveal the secrets of Oaxacan political religious and social life embody changing relationships to mortality and violence and even offer insight into the practice of anthropology itself

The Weight of Images Katariina Kyrölä, 2016-02-17 The Weight of Images explores the ways in which media images can train their viewers bodies Proposing a shift away from an understanding of spectatorship as being constituted by acts of the mind this book favours a theorization of relations between bodies and images as visceral affective engagements that shape our body image with close attention to one particularly charged bodily characteristic in contemporary western culture fat The first mapping of the ways in which fat gendered bodies are represented across a variety of media forms and genres from reality television to Hollywood movies from TV sitcoms to documentaries from print magazine and news media to online pornography The Weight of Images contends that media images of fat bodies are never only about fat rather they are about our relation to corporeal vulnerability overall A ground breaking volume engaging with a rich variety of media and cultural texts whilst examining the possibilities of critical auto ethnography to unravel how body images take shape affectively between bodies and images this book will appeal to scholars and students of sociology media cultural and gender studies with interests in embodiment and affect

For an Ecology of Images Peter Szendy, 2025-01-28 A new ecological approach to images by a renowned philosopher When Susan Sontag first proposed the idea of an ecology of images she meant it as an exhortation to be vigilant against the vast surplus of pictures threatening our ability to truly see Today beyond the deep anxieties over a diminishing attention economy concern focuses on the environmental cost of storing and circulating the digital images that confront us with unprecedented speed Against the disposable rapidity demanded by digital media Peter Szendy emphasizes the labor and time required for images to develop and come into view This inquisitive essay takes us from mimicry in the animal kingdom to the history of the shadow Pliny's story about the birth of painting to Nabokov's butterflies the first use of slo mo in film to the first aerial photograph

Grammatology of Images Sigrid Weigel, 2022-08-16

Grammatology of Images radically alters how we approach images Instead of asking for the history power or essence of images Sigrid Weigel addresses imaging as such The book considers how something a visible gets transformed into an image Weigel scrutinizes the moment of mis en apparition of making an appearance and the process of concealment that accompanies any imaging Weigel reinterprets Derrida's and Freud's concept of the trace as that which must be thought before something exists In doing so she illuminates the threshold between traces and iconic images between something immaterial and its pictorial representation Chapters alternate between general accounts of the line the index the effigy and the cult image and case studies from the history of science art politics and religion involving faces as indicators of emotion caricatures as effigies of defamation and angels as embodiments of transcendental ideas Weigel's approach to images illuminates fascinating unexpected correspondences between premodern and contemporary image practices between the history of religion and the modern sciences and between things that are and are not understood as art **Computer**

Physical and Biological Processing of Images O. J. Braddick, A. C. Sleight, 2012-12-06 This book consists of papers presented at an international symposium sponsored and organised by The Rank Prize Funds and held at The Royal Society London on 27 29 September 1982 Since the inception of the Funds the Trustees and their Scientific Advisory Committee on Optoelectronics have considered that the scope of optoelectronics should extend to cover the question of how the eye transduces and processes optical information The Funds have aimed to organise symposia on topics which because of their interdisciplinary nature were not well covered by other regular international scientific meetings It was therefore very appropriate that the 1982 symposium should be on Physical and Biological Processing of Images The purpose of the symposium was to bring together scientists working on the physiology and psychology of visual perception with those developing machine systems for image processing and understanding The papers were planned in such a way as to emphasise questions of how image analysing systems can be organised as well as the principles underlying them rather than the detailed biophysics and structure of sensory systems or the specific design of hardware devices As far as possible related topics in biological and artificial systems were considered side by side

MAPPING: Management and Processing of Images for Population Imaging Michel Dojat, Wiro Niessen, David N. Kennedy, 2017-09-04 Several recent papers underline methodological points that limit the validity of published results in imaging studies in the life sciences and especially the neurosciences Carp 2012 Ingre 2012 Button et al 2013 Ioannidis 2014 At least three main points are identified that lead to biased conclusions in research findings endemic low statistical power and selective outcome and selective analysis reporting Because of this and in view of the lack of replication studies false discoveries or solutions persist To overcome the poor reliability of research findings several actions should be promoted including conducting large cohort studies data sharing and data reanalysis The construction of large scale online databases should be facilitated as they may contribute to the definition of a collective mind Fox et al 2014 facilitating open collaborative work or crowd science Franzoni and Sauermann 2014 Although technology alone cannot change scientists practices Wicherts et al 2011 Wallis et al 2013 Poldrack and Gorgolewski 2014 Roche et al 2014 technical solutions should be identified which support a more open science approach Also the analysis of the data plays an important role For the analysis of large datasets image processing pipelines should be constructed based on the best algorithms available and their performance should be objectively compared to diffuse the more relevant solutions

Also provenance of processed data should be ensured MacKenzie Graham et al 2008 In population imaging this would mean providing effective tools for data sharing and analysis without increasing the burden on researchers This subject is the main objective of this research topic RT cross listed between the specialty section Computer Image Analysis of Frontiers in ICT and Frontiers in Neuroinformatics Firstly it gathers works on innovative solutions for the management of large imaging datasets possibly distributed in various centers The paper of Danso et al describes their experience with the integration of neuroimaging data coming from several stroke imaging research projects They detail how the initial NeuroGrid core metadata schema was gradually extended for capturing all information required for future metaanalysis while ensuring semantic interoperability for future integration with other biomedical ontologies With a similar preoccupation of interoperability Shanoir relies on the OntoNeuroLog ontology Temal et al 2008 Gibaud et al 2011 Batrancourt et al 2015 a semantic model that formally described entities and relations in medical imaging neuropsychological and behavioral assessment domains The mechanism of Study Card allows to seamlessly populate metadata aligned with the ontology avoiding fastidious manual entrance and the automatic control of the conformity of imported data with a predefined study protocol The ambitious objective with the BIOMIST platform is to provide an environment managing the entire cycle of neuroimaging data from acquisition to analysis ensuring full provenance information of any derived data Interestingly it is conceived based on the product lifecycle management approach used in industry for managing products here neuroimaging data from inception to manufacturing Shanoir and BIOMIST share in part the same OntoNeuroLog ontology facilitating their interoperability ArchiMed is a data management system locally integrated for 5 years in a clinical environment Not restricted to Neuroimaging ArchiMed deals with multi modal and multi organs imaging data with specific considerations for data long term conservation and confidentiality in accordance with the French legislation Shanoir and ArchiMed are integrated into FLI IAM1 the national French IT infrastructure for in vivo imaging
