Coutre,2025-05-23 Over the second half of the 20th century many questions relating to food and nutrition science were considered to be nearly understood and beyond ensuring the balanced delivery of proteins carbohydrates and fats no major discoveries were anticipated in this scientific field Much of the technological advancements in the field were focused on food production and procurement at scale Now about half a century later the domain of food and nutrition science technology is experiencing a renaissance unlike any other We are not only discussing food and public health using narratives ranging from functional to superfoods but we are also engaging in conversations about planetary health and the role of foods as medicine among other topics Furthermore we are beginning to realize the intricate interplay between food systems and our global climate Our methods of procuring nutrition contribute to climate change and we are witnessing a significant increase in climate driven events that threaten our food security Ten years ago in collaboration with the team at Frontiers we founded Frontiers in Nutrition to provide a rigorous science based platform for the open access publication and exchange of findings within a fully integrated scope of discussing food and nutrition With this Research Topic we welcome the world s foremost influential and leading scientists to join us in celebrating our 10th anniversary and to contribute bold and visionary articles

Strengthening Food Labeling Policies in Brazil Rosires Deliza,Camila Corvalan,Fabio Gomes,Simon

Barquera,2023-10-11 Data from Brazil shows an increase in obesity and non communicable diseases which is related to the expansion of the participation of ultra processed food products in diets and in the food environment displacing fresh and minimally processed foods and meals prepared with them One of the solutions to improve food environments requires the implementation of effective and adequate food labeling regulations including front of package labeling This policy tool has the potential to inform the consumers about the nutrients ingredients or any other component of public health concern contained in the products and facilitate healthier food choices *Science of Food Nutrition and Health* Vinod

Puri,2023-07-21 Diet is one of the important facets of comprehensive approach to good health along with physical social emotional and intellectual well being During the second half of the 20th century we witnessed a dramatic change in our eating patterns and lifestyle aided by agricultural and industrial revolution globalisation and urbanisation and emergence of associated diet related chronic diseases such as obesity coronary heart disease hypertension diabetes some type of cancer stroke and degenerative arthritis The science of food and nutrition is very complex Nutrition science like many other fields of science is evolutionary and there are always conflicting research outcomes that need to be carefully evaluated We ingest hundreds of dietary components every day and understanding various metabolic pathways and the effect of interactions of various dietary components in vivo is rather challenging Recent advances in genetic research fostered the emergence of new disciplines such as nutrigenomics proteomics metabolomics and transcriptomics which can shed light on the molecular level interaction between dietary nutrients and the genome These technologies provide the vision for future nutrition research that may unravel how the diet genome interactions modifies the phenotype Food may not be the overall cure for the treatment of

every possible disease but the importance of food in both causing and relieving certain problems cannot be neglected This is one of the most researched topics and there is a lot written about it However this book is probably the only text that provides up to date information on the various interrelated topics on food and nutrition that would be of interest to wider community
