Meiring, 1981 *Mathematical Problem Solving and New Information Technologies* Joao P. Ponte, 1992-08-11 A strong and fluent competency in

mathematics is a necessary condition for scientific technological and economic progress However it is widely recognized that problem solving reasoning and thinking processes are critical areas in which students performance lags far behind what should be expected and desired Mathematics is indeed an important subject but is also important to be able to use it in extra mathematical contexts Thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite different processes and issues This book includes the revised papers presented at the NATO ARW Information Technology and Mathematical Problem Solving Research held in April 1991 in Viana do Castelo Portugal which focused on the implications of computerized learning environments and cognitive psychology research for these mathematical activities In recent years several committees professional associations and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula all emphasizing the importance of problem solving In order to be successful these reforming intentions require a theory driven research base But mathematics problem solving may be considered a chaotic field in which progress has been quite slow

Mathematical Problem Solving ALAN H. SCHOENFELD,2014-06-28 This book is addressed to people

with research interests in the nature of mathematical thinking at any level to people with an interest in higher order thinking skills in any domain and to all mathematics teachers The focal point of the book is a framework for the analysis of complex problem solving behavior That framework is presented in Part One which consists of Chapters 1 through 5 It describes four qualitatively different aspects of complex intellectual activity cognitive resources the body of facts and procedures at one's disposal heuristics rules of thumb for making progress in difficult situations control having to do with the efficiency with which individuals utilize the knowledge at their disposal and belief systems one's perspectives regarding the nature of a discipline and how one goes about working in it Part Two of the book consisting of Chapters 6 through 10 presents a series of empirical studies that flesh out the analytical framework These studies document the ways that competent problem solvers make the most of the knowledge at their disposal They include observations of students indicating some typical roadblocks to success Data taken from students before and after a series of intensive problem solving courses document the kinds of learning that can result from carefully designed instruction Finally observations made in typical high school classrooms serve to indicate some of the sources of students' often counterproductive mathematical behavior

examine CPS DDM and CDC This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another what learning conditions result in transferable knowledge and skills and how these features can be trained
