Creating Consciousness A Study Of Consciousness Creativity Evolution And Violence:

Creating Consciousness Albert Low, 2002 This is Albert Low's profound discussion of the philosophical religious and scientific problem of consciousness in relation to evolution creativity spirituality and violence Low weaves together fresh discoveries from contemporary thinkers with perennial wisdom from pre modern religious sources while providing a highly original discussion of human nature Low's main thesis is that each individual is a divided reality We are simultaneously at the centre unified self and the periphery many dimensions of self The fact that we are one and yet divided leads to Low's important discussion of ambiguity creative tension and violence as integral to human existence [Conflict and Creativity at Work](#) Albert Low, 2008-09-01 Contributes to the tide of activism that is calling for higher ethical standards and corporate social responsibility within the corporate world This book offers a way to look at a company work a product and company organization *Contemplative Learning and Inquiry across Disciplines* Olen Gunnlaugson, Edward W. Sarath, Charles Scott, Heesoon Bai, 2014-07-16 A wide ranging consideration of the emerging field of contemplative education Contemplative approaches to higher education have been gaining in popularity and application across a wide range of disciplines Spurring conferences a growing body of literature and several academic programs or centers these approaches promise to contribute significantly to higher education in the years to come This volume provides an overview of the current landscape of contemplative instruction pedagogy philosophy and curriculum from the perspectives of leading researchers and scholar practitioners Contributors come from a variety of disciplines including education management and leadership studies humanities social sciences the arts and information science Drawing on diverse contexts the essays reveal the applicability of contemplative studies as a watershed field capable of informing enriching and sustaining the many disciplines and instructional contexts that comprise higher education Chapters discuss the theoretical aspects of the field the details experiences and challenges of contemplative approaches and the hopes and concerns for the future of this field *How Mathematicians Think* William Byers, 2010-05-02 To many outsiders mathematicians appear to think like computers grimly grinding away with a strict formal logic and moving methodically even algorithmically from one black and white deduction to another Yet mathematicians often describe their most important breakthroughs as creative intuitive responses to ambiguity contradiction and paradox A unique examination of this less familiar aspect of mathematics *How Mathematicians Think* reveals that mathematics is a profoundly creative activity and not just a body of formalized rules and results Nonlogical qualities William Byers shows play an essential role in mathematics Ambiguities contradictions and paradoxes can arise when ideas developed in different contexts come into contact Uncertainties and conflicts do not impede but rather spur the development of mathematics Creativity often means bringing apparently incompatible perspectives together as complementary aspects of a new more subtle theory The secret of mathematics is not to be found only in its logical structure The creative dimensions of mathematical work have great implications for our notions of mathematical and scientific truth

and How Mathematicians Think provides a novel approach to many fundamental questions Is mathematics objectively true Is it discovered or invented And is there such a thing as a final scientific theory Ultimately How Mathematicians Think shows that the nature of mathematical thinking can teach us a great deal about the human condition itself **Wild Geese** Victor Sōgen Hori,Alexander Duncan Soucy,John S. Harding,2010 Buddhism has been practiced in Canada for more than a century and in recent years has grown dramatically Immigrant communities construct temples in Canada s urban centres The Dalai Lama is one of the world s most recognisable figures and Buddhist ideas and practices such as meditation vegetarianism and non violence are increasingly a part of mainstream culture More native born Canadians are turning to Buddhism now than ever before The most comprehensive study of Buddhism in Canada to date Wild Geese offers a history of the religion s evolution in Canada surveys the diverse communities and beliefs of Canadian Buddhists and presents biographies of Buddhist leaders The essays cover a broad range of topics including Chinese Tibetan Lao Japanese Korean and Vietnamese Buddhisms critical reflections on Buddhism in the West census data on the growth of the religion and analysis of the global context For The growth of Buddhism in Canada Presenting a sweeping portrait of a crucial part of the multicultural mosaic Wild Geese is essential reading for anyone interested in religious life in Canada *Deep Thinking: What Mathematics Can Teach Us About The Mind* William Byers,2014-09-22 There is more than one way to think Most people are familiar with the systematic rule based thinking that one finds in a mathematical proof or a computer program But such thinking does not produce breakthroughs in mathematics and science nor is it the kind of thinking that results in significant learning Deep thinking is a different and more basic way of using the mind It results in the discontinuous aha experience which is the essence of creativity It is at the heart of every paradigm shift or reframing of a problematic situation The identification of deep thinking as the default state of the mind has the potential to reframe our current approach to technological change education and the nature of mathematics and science For example there is an unbridgeable gap between deep thinking and computer simulations of thinking Many people suspect that such a gap exists but find it difficult to make this intuition precise This book identifies the way in which the authentic intelligence of deep thinking differs from the artificial intelligence of big data and analytics Deep thinking is the essential ingredient in every significant learning experience which leads to a new way to think about education It is also essential to the construction of conceptual systems that are at the heart of mathematics and science and of the technologies that shape the modern world Deep thinking can be found whenever one conceptual system morphs into another The sources of this study include the cognitive development of numbers in children neuropsychology the study of creativity and the historical development of mathematics and science The approach is unusual and original It comes out of the author s lengthy experience as a mathematician teacher and writer of books about mathematics and science such as How Mathematicians Think Using Ambiguity Contradiction and Paradox to Create Mathematics and The Blind Spot Science and the Crisis of Uncertainty *Hakuin on Kensho* Albert Low,Hakuin,2006-09-12 Kensho is the Zen experience of

waking up to one's own true nature of understanding oneself to be not different from the Buddha nature that pervades all existence. The Japanese Zen Master Hakuin (1689-1769) considered the experience to be essential. In his autobiography he says: "Anyone who would call himself a member of the Zen family must first achieve kensho (realization of the Buddha's way). If a person who has not achieved kensho says he is a follower of Zen, he is an outrageous fraud. A swindler, pure and simple." Hakuin's short text on kensho, *Four Ways of Knowing of an Awakened Person*, is a little-known Zen classic. The four ways he describes include the way of knowing of the Great Perfect Mirror, the way of knowing equality, the way of knowing by differentiation, and the way of the perfection of action. Rather than simply being methods for checking for enlightenment in oneself, these ways ultimately exemplify Zen practice. Albert Low has provided careful line-by-line commentary for the text that illuminates its profound wisdom and makes it an inspiration for deeper spiritual practice. **The Origin of Human Nature** Albert Low, 2008. Offers an original way to integrate spiritual and scientific views of human evolution. This work offers an alternative to the way we think about our origins: random mutation, mechanistic neo-Darwinism, Genesis: God did it all personally, and Intelligent Design: God personally does what we can't otherwise account for. **The British National Bibliography** Arthur James Wells, 2007. *Compassionate Critical Thinking* Ira Rabois, 2016-10-05. Teachers can't add more minutes to a school day, but with mindfulness they can add depth to the moments they do have with students in their classroom. *Compassionate Critical Thinking* demonstrates how to use mindfulness with instructional effectiveness to increase student participation and decrease classroom stress, and it turns the act of teaching into a transformational practice. Many books teach mindfulness, but few provide a model for teaching critical thinking and integrating it across the curriculum. The purpose of this book is to show teachers how to create a classroom culture of compassionate critical thinking. When students feel a lack of meaning and purpose in their school lives, they resist learning. Using a Socratic style of inquiry, Rabois changes the classroom dynamic to encourage self-reflection, insight, and empathy. Vignettes capture dialogue between teacher and students to illustrate how mindfulness practices elicit essential questions which stimulate inquiry and direct discovery. What bigger mystery is there, what more interesting and relevant story than the story of one's own mind and heart, and how they relate us to the world? *Co-Engineering and Participatory Water Management* Katherine A. Daniell, 2012-05-31. A transdisciplinary book offering evaluation-based approaches for effective participatory interventions for academic researchers, practitioners, and policy makers working in water management. **Evolution of Consciousness** Robert Evan Ornstein, 1992-11. Based on his life's research, Robert Ornstein provides a look at the evolution of the mind. He explains that we are not rational but adaptive, and that it is Darwin, not Freud, who is the central scientist of the brain. Our minds have evolved to help us survive, not to reason. At the same time, our individual worlds have developed our minds and destroyed many of our natural abilities. *Nihilist Order* Professor David Ohana, 2016-04-19. The explosive combination of nihilist leanings together with a craving for totalitarianism was an ideal of philosophers, cultural critics, political theorists, engineers,

architects and aesthetes long before it materialised in flesh and blood not only in technology but also in fascism Nazism bolshevism and radical European political movements The Nihilist Order originally published in three hardcover volumes and now published in a consolidated paperback edition with an encompassing new Introduction inspired excellent review endorsements both amongst the academic and public spheres and has been heralded as a great achievement in European intellectual and cultural history **The Publishers Weekly** ,2001 **Dialogue as a Collective Means of Design**

Conversation Patrick M. Jenlink,Bela H. Banathy,2007-11-24 Dialogue as a Collective Means of Design Conversation is the second volume edited by Patrick M Jenlink and Bela H Banathy to offer a cross disciplinary approach to examining dialogue as a communicative medium In this Compendium the contributing authors set forth their ideas experiences and perspectives as the path of a learning journey a journey of new meaning of new understanding and of becoming self aware of design conversation as future creating and consciousness evolving In particular this volume comes at a time when we as a global society are faced with the question of how we shape our actions and in turn shape our future through conversation that is focused on resolving global conflict and fostering world peace The volume evokes in the reader a realization that our greatest potential rests in no small measure with our collective capacity for cultural creativity and in our capacity to achieve new levels of consciousness through dialogue and design conversation *Radicalism and the Revolt Against Reason (Routledge Revivals)*

Irving Louis Horowitz,2009-09-10 Radicalism and the Revolt Against Reason is a work that continues to have a steady and large scale impact on political and social theory fifty years since its first appearance A study of how radical thought modifies its actions and ideologies in a time of unrealized and frustrated expectations the focus is on Georges Sorel and the Europe of the fin de si cle a time when socialist revolution was forcefully set aside by liberal reform In a technique that presaged contemporary period radical demands did not simply dissolve or disappear they profoundly changed emphasis from the impersonal forces of history to highly personal forces of individual will This edition includes a substantial brand new introduction by the author **Consciousness in Action** Andrew Beath,2005 Featuring the thoughts of Julia Butterfly Hill Deena Metzger Joanna Macy John Mack and others this inspiring dialogue between environmental and spiritual activists centers on the seven attributes of consciousness that they have employed in their activism **The Teilhard Review and Journal of Creative Evolution** ,1982 **Evolutionary Healing** Barbara Sarter,2002 Taking both a spiritual and philosophical approach this book is a reflection of the author s quest to come to terms with the meaning of human suffering The book integrates ancient and modern philisophies of life with modern scientific discovery The author applies these philosophies with the process of healing and describes evolutionary healing as the evolution of one s consciousness through health and disease **American Book Publishing Record** ,2007
