Installation art as experience of self, in space and time Christine Vial Kayser,Sylvie Coëllier,2021-09-07 Installation art has modified our relationship to art for over fifty years by soliciting the whole body demonstrating its sensitivity to space surroundings and the living beings with which it is constantly interacting This book analyses this modification of perception through phenomenological approaches convoking Husserl Heidegger Merleau Ponty as well as Levinas Depraz and the neuroscientist Varela This theoretical framework is implicit in the various case studies which revisit works that have become classic or emblematic by Carl Andre Bruce Nauman Dan Graham inaugural experiments that remain available only through photographic and written archives by Jean Michel Sanejouand Philippe Parreno as well as the influence of the mode in the realm of music The book also examines the transference of this Western form to Asia revealing how it resonates with ancient Asian representations and practices often associated with the spiritual The distinct chapters underpin the role of space as a metaframe the common ground of the various installations While the nature and agency of space varies from social historical space leisurely or political space inner psychological space to shared empty space these installations reveal the chiasm

between the individual body and the outside space The chapters bear testimony of the process in which the physical journey of the spectator's body within a material at times invisible space and its structural components takes place in time as a succession of micro experiences Installation art as experience of self in space and time adds to the existing literature of art history a level of theoretical experiential and transcultural analysis that will make this inquiry relevant to both university students and independent researchers in the academic fields of philosophy psychology aesthetics art theory and history religious and Asian studies

web we shall describe sections of the holomorphic line bundles $\mathcal{O}(k)$ on $\mathbb{P}^n$ and show that the canonical bundle $\mathcal{K}$ of the
projective space $\mathbb{P}^n$ is isomorphic to the line bundle $\mathcal{O}(-n-1)$ it will turn out that everything can be expressed in polynomials
which turns complex geometry for $\mathbb{P}^n$ into complex algebraic geometry
