Biomaterials Roderic S. Lakes, Joon B. Park, 2012-12-06 This book is intended as a general introduction to the uses of artificial materials in the human body for the purposes of aiding healing correcting deformities and restoring lost function It is an outgrowth of an undergraduate course for senior students in biomedical engineering and it is offered as a text to be used in such courses Topics include biocompatibility techniques to minimize cor rosion or other degradation of implant materials principles of materials science

as it relates to the use of materials in the body and specific uses of materials in various tissues and organs It is expected that the student will have successively completed elementary courses in the mechanics of deformable bodies and in anatomy and physiology and preferably also an introductory course in materials science prior to undertaking a course in biomaterials Many quantitative examples are included as exercises for the engineering student We recognize that many of these involve unrealistic simplifications and are limited to simple mechanical or chemical aspects of the implant problem We offer as an apology the fact that biomaterials engineering is still to a great extent an empirical discipline that is complicated by many unknowns associated with the human body In recognition of that fact we have endeavored to describe both the successes and the failures in the use of materials in the human body Also included are many photographs and illustrations of implants and devices as an aid to visualization

The Play Out of Context Hanna Scolnicov, Peter Holland, 1989-02-24 This is a volume of essays which examines the relationship between the play and its historical and cultural contexts Transferring plays from one period or one culture to another is so much more than translating the words from one language into another The contributors vary their approaches to this problem from the theoretical to the practical from the literary to the theatrical with plays examined both historically and synchronically The articles interact with each other presenting a diversity of views of the central theme and establishing a dialogue between

scholars of different cultures With play texts quoted in English the range of themes stretches from a Japanese interpretation of Chekhov to Shakespeare in Nazi Germany and Racine borrowing from Sophocles Most of the essays are based on papers presented at the Jerusalem Theatre Conference in 1986 The book will be of interest to students and scholars of the theatre and of literature and literary theory as well as to theatregoers

Harold Pinter Graham Saunders,2023-06-05 Harold Pinter provides an up to date analysis and reappraisal concerning the work of one of the most studied and performed dramatists in the world Drawing extensively from The Harold Pinter Archive at the British Library as well as reviews and other critical materials this book offers new insights into previously established views about his work The book also analyses and reappraises specific key historical and contemporary productions including a selection of Pinter s most significant screenplays In particular this volume seeks to assess Pinter s critical reputation and legacy since his death in 2008 These include his position as a political writer and political activist from disassociation and neutrality on the subject until relatively late in his career when his drama sought to explicitly address questions of political dissent and torture by totalitarian regimes The book revisits some familiar territories such as Pinter s place as a British absurdist and the role memory plays in his work but it also sets out to explore new territories such as Pinter s changing attitudes towards gender in the light of MeToo and queer politics and how in particular a play such as *The Caretaker* 1960 through several key productions has brought the issues of race into sharper focus Part of the Routledge Modern and Contemporary Dramatist series Harold Pinter provides an essential and accessible guide to the dramatists work

The Era Almanack ,1895 **Adapting King Lear for the Stage** Lynne Bradley,2016-03-16 Questioning whether the impulse to adapt Shakespeare has changed over time Lynne Bradley argues for restoring a sense of historicity to the study of adaptation Bradley compares Nahum Tate s *History of King Lear* 1681 adaptations by David Garrick in the mid eighteenth century and nineteenth century Shakespeare burlesques to twentieth century theatrical rewritings of *King Lear* and suggests latter day adaptations should be viewed as a unique genre that allows playwrights to express modern subject positions with regard to their literary heritage while also participating in broader debates about art and society In identifying and relocating different adaptive gestures within this historical framework Bradley explores the link between the critical and the creative in the history of Shakespearean adaptation Focusing on works such as Gordon Bottomley s *King Lear s Wife* 1913 Edward Bond s *Lear* 1971 Howard Barker s *Seven Lears* 1989 and the Women s Theatre Group s *Lear s Daughters* 1987 Bradley theorizes that modern rewritings of Shakespeare constitute a new type of textual interaction based on a simultaneous double gesture of collaboration and rejection She suggests that this new interaction provides constituent groups such as the feminist collective who wrote *Lear s Daughters* a strategy to acknowledge their debt to Shakespeare while writing against the traditional and negative representations of femininity they see reflected in his plays

Hydrogen-bonding Research In Photochemistry, Photobiology, And Optoelectronic Materials Keli Han,Guangjiu Zhao,2019-03-13 As one of the typical intermolecular

interactions hydrogen bonding plays a significant role in molecular structure and function When the hydrogen bond research system is connected with the photon the hydrogen bonding effect turns to an excited state one influencing photochemistry photobiology and photophysics Thus the hydrogen bond in an excited state is a key topic for understanding the excited state properties especially for optoelectronic or luminescent materials The approaches presented in this book include quantum chemical calculation molecular dynamics simulation and ultrafast spectroscopy which are strong tools to investigate the hydrogen bond Unlike other existing titles this book combines theoretical calculations and experiments to explore the nature of excited state hydrogen bonds By using these methods more details and faster processes involved in excited state dynamics of hydrogen bond are explored This highly interdisciplinary book provides an overview of leading hydrogen bond research It is essential reading for faculties and students in researching photochemistry photobiology and photophysics as well as novel optoelectronic materials fluorescence probes and photocatalysts It will also guide research beginners to getting a quick start within this field
