Cracking The Mat 1998:

New Serial Titles ,1998 A union list of serials commencing publication after Dec 31 1949 **Fitness-for-Service Fracture Assessment of Structures Containing Cracks** Uwe Zerbst,Manfred Schödel,Stephen Webster,Robert Ainsworth,2013-10-22 The purpose of Fitness for Service Fracture Assessment of Structures Containing Cracks is to facilitate the use of fracture mechanics based failure assessment procedures for the evaluation and design of structures and components All practical structures contain flaws and the optimum combination of cost efficiency and safety whilst achieving the required capability can only be realised by using state of the art methods such as that represented by the European flaw assessment method SINTAP FITNET to analyse the safety risk This book is written by practitioners with extensive experience in both the development and use of integrity assessment methods and provides comprehensive information on the basic principles and use of analytical flaw assessment It provides an introduction to the method its background how it can be applied its potential and importantly its limitations The explanations are complimented by using a large number of worked examples and validation exercises which illustrate all aspects of the procedure In addition for students and engineers who are new to the subject a comprehensive glossary of basic terms used in fracture mechanics based integrity evaluations is included The topics addressed include Crack driving force CDF and failure assessment diagram FAD type analyses Preparation of the input parameters crack dimensions stress strain properties fracture toughness statistical aspects Determination of the model parameters stress intensity factor and yield load solutions Treatment of combined primary and secondary loading together with residual stress effects Analysis of the effect of constraint effects treatment of small defects and section size effects Treatment of mixed mode loading Consideration of the influences of strength mismatch Reliability aspects Comprehensive description of the use of structural integrity methods to optimise cost effectiveness and safety Detailed description of how to evaluate the integrity of structures containing cracks Valuable background information for understanding the methods their potential and limitations Large number of worked examples which demonstrate all aspects of the methods Descriptive readable writing style Applicable to a wide range of interests from the student university or self study to the expert who requires a state of the art document **Fatigue Life Analyses of Welded Structures** Tom Lassen,Naman Récho,2013-03-01 Avoiding or controlling fatigue damage is a major issue in the design and inspection of welded structures subjected to dynamic loading Life predictions are usually used for safe life analysis i e for verifying that it is very unlikely that fatigue damage will occur during the target service life of a structure Damage tolerance analysis is used for predicting the behavior of a fatigue crack and for planning of in service scheduled inspections It should be a high probability that any cracks appearing are detected and repaired before they become critical In both safe life analysis and the damage tolerance analysis there may be large uncertainties involved that have to be treated in a logical and consistent manner by stochastic modeling This book focuses on fatigue life predictions and damage tolerance analysis of welded joints

and is divided into three parts The first part outlines the common practice used for safe life and damage tolerance analysis with reference to rules and regulations The second part emphasises stochastic modeling and decision making under uncertainty while the final part is devoted to recent advances within fatigue research on welded joints Industrial examples that are included are mainly dealing with offshore steel structures Spreadsheets which accompany the book give the reader the possibility for hands on experience of fatigue life predictions crack growth analysis and inspection planning As such these different areas will be of use to engineers and researchers

From Fossils to Astrobiology Joseph Seckbach, Maud Walsh, 2008-11-07 From Fossils to Astrobiology reviews developments in paleontology and geobiology that relate to the rapidly developing field of Astrobiology the study of life in the Universe Many traditional areas of scientific study including astronomy chemistry and planetary science contribute to Astrobiology but the study of the record of life on planet Earth is critical in guiding investigations in the rest of the cosmos In this varied book expert scientists from 15 countries present peer reviewed stimulating reviews of paleontological and astrobiological studies The overviews of established and emerging techniques for studying modern and ancient microorganisms on Earth and beyond will be valuable guides to evaluating biosignatures which could be found in the extraterrestrial surface or subsurface within the Solar System and beyond This volume also provides discussion on the controversial reports of nanobacteria in the Martian meteorite ALH84001 It is a unique volume among Astrobiology monographs in focusing on fossil evidence from the geological record and will be valuable to students and researchers alike

Applied Mechanics Reviews, 1998 **Mechanical Properties of Ceramics and Composites** Roy W. Rice, 2000-04-18 This book presents a comprehensive review evaluation and summary of the dependence of mechanical properties on grain and particle parameters of monolithic ceramics and ceramic composites Emphasizing the critical link between fabrication and ceramic performance the book covers the grain dependence of monolithic properties and the dependence of ceramic composite properties on grain and particulate parameters It includes theoretical and conceptual background pertinent models experimental results a data review discussion and a summary or recommendations Illustrations feature microstructural details while graphs plot data on material hardness compressive strength and other pivotal variables

C. Bye,1999 Portland cement is one of the most traditional of construction materials Rising costs of the energy required for its manufacture and the increasing interest in understanding the mechanisms of concrete deterioration as well as the importance of optimising the use of Portland cement in high quality concrete have continued to sustain interest in this important material This second edition of this popular book provides an up to date introduction to the raw materials and manufacturing processes of

Portland cement It gives an introductory account of cement composition manufacture quality assessment hydration and the resulting microstructure physical property relationships and some mechanisms of the chemical degradation of hardened cement paste The book is primarily intended for students of materials sciences and graduates in pure science or engineering entering the cement or concrete industries However anyone requiring a good clear introduction to this material will find this book provides helpful information

The Virtual Crack Closure Technique: History, Approach and Applications

Ronald Krueger,2002 An overview of the virtual crack closure technique is presented The approach used is discussed the history summarized and insight into its applications provided Equations for two dimensional quadrilateral elements with linear and quadratic shape functions are given Formula for applying the technique in conjunction with three dimensional solid elements as well as plate shell elements are also provided Necessary modifications for the use of the method with geometrically nonlinear finite element analysis and corrections required for elements at the crack tip with different lengths and widths are discussed The problems associated with cracks or delaminations propagating between different materials are mentioned briefly as well as a strategy to minimize these problems Due to an increased interest in using a fracture mechanics based approach to assess the damage tolerance of composite structures in the design phase and during certification the engineering problems selected as examples and given as references focus on the application of the technique to components made of composite materials
