## **Cracking The Gender Code Who Rules The Wired World:**

**Cracking the Gender Code** Melanie Stewart Millar,1998 The digital world its advertising machinery and the popular media are pushing women back into traditional roles and once again creating a superior hypermacho expert male Women must look critically at who is in charge of the new technology and challenge the gender codes that can work against them In this path breaking book Melanie Stewart Millar explores power relations in the digital world and asks us to question what is really going on How is technology shaping our future What is the role of women within digital culture What is the corporate agenda How is it influencing women s work Provocative and incisive Cracking the Gender Code questions how the gains women have made through feminism over the last decades are being eroded It looks specifically at how the articles and images of Wired the magazine of the digital generation are detrimental to women a discourse that may be establishing the underlying ideology of a far reaching communications industry Stewart Millar argues that simply being computer literate or knowing how to use the Net is not good enough Women need to demystify the technology and crack the gender code to participate equally in the cyber world of the future Feminism in Play Kishonna L. Gray,Gerald Voorhees,Emma

Vossen,2018-10-04 Feminism in Play focuses on women as they are depicted in video games as participants in games culture and as contributors to the games industry This volume showcases women s resistance to the norms of games culture as well as women s play and creative practices both in and around the games industry Contributors analyze the interconnections between games and the broader societal and structural issues impeding the successful inclusion of women in games and games culture In offering this framework this volume provides a platform to the silenced and marginalized offering counter narratives to the post racial and post gendered fantasies that so often obscure the violent context of production and consumption of games culture **Global Issues and Ethical Considerations in Human Enhancement Technologies**

Thompson, Steven John,2014-04-30 With rapid advancements in human enhancement technologies society struggles with many issues such as definition effects participation regulation and control Current and future initiatives in these technologies may not be in the participants best interests therefore it is imperative for research on humanitarian considerations to be available to those affiliated with this field Global Issues and Ethical Considerations in Human Enhancement Technologies compiles prestigious research and provides a well rounded composite of the field s role in emerging technologies Addressing both present and future concerns this publication serves as a valuable reference work for researchers students professionals and practitioners involved in computer science and the humanities as well as many engaged in a humanities approach to metasystems new artificial life and robotics Soaring Beyond Boundaries ,2007-01-01 Higher education systems in many countries are undergoing significant changes in response to variety of local national and international pressures Among these the shift from elitism to the provision of mass higher education increased impact of internationalization and globalization which are increasingly blurring national boundaries increased competition among universities for limited resources to

support higher education sector the impact of technology and the knowledge economy and the continuing quest educational for equity Given what we already know about the position of women in the academy what is so significant about the account of women represented in this book Lessons from colleagues in Western universities provide important models for understanding some aspects of gendered identity of women scholars however a deeper understanding of educational experiences for women in countries such as China Turkey Iran Pakistan may potentially offer innovative insights to our current understanding of gender within education In this age of globalization there are common themes that transcend the experiences of women across very different social cultural economic and political contexts Therefore accounts of women scholars represented in this volume demonstrate that the experiences women scholars are not isolated incidents but global phenomena and may offer alternative approaches to problems that seem insurmountable to women at the bottom of the professional ladder Further the experiences of non Western women scholars are important because it is only through an understanding of their educational conditions that institutions can implement policies and practices to respond effectively and to create work environments that are supportive to professional aspirations of these scholars Effective policies can only be attained when there is a clear understanding of the barriers and challenges female scholars Given that gender concerns especially in non Western countries have historically occupied and to some extent continue to occupy a marginal position in the daily operations of institutions of higher education it is critical to highlight their potentially harmful effects not only on women scholars but on institutions as well

**Breaking Into the Lab** Sue V. Rosser, 2014-10-22 Why are there so few women in science In *Breaking into the Lab* Sue Rosser uses the experiences of successful women scientists and engineers to answer the question of why elite institutions have so few women scientists and engineers tenured on their faculties Women are highly qualified motivated students and yet they have drastically higher rates of attrition and they are shying away from the fields with the greatest demand for workers and the biggest economic payoffs such as engineering computer sciences and the physical sciences Rosser shows that these continuing trends are not only disappointing they are urgent the U S can no longer afford to lose the talents of the women scientists and engineers because it is quickly losing its lead in science and technology Ultimately these biases and barriers may lock women out of the new scientific frontiers of innovation and technology transfer resulting in loss of useful inventions and products to society
