Cradle Of Mankind:

The Official Field Guide to the Cradle of Humankind Brett Hilton-Barber, Lee R. Berger, 2002 Who were the original people that occupied South Africa and how far back do we go to find out Beneath the dolomitic outcrops and the grasslands of an area in the north east of South Africa known as the cradle of humankind lies an extensive series of underground caverns that have preserved clues of our most ancient past Declared a World Heritage Site in 1999 by UNESCO the area embraces Sterkfontein Swartkrans Kromdraai and environs Research in the area has shaped much of our thinking about the development of Homo sapiens and fossil finds have proved beyond doubt that humanity originated in Africa and even suggest that the emergence of our own species may well have happened in South Africa , **Cradle of Mankind** Mohamed Amin, 1981 *Rainbow Reading Level 4 - Archaeology: Cradle of Humankind* Nirosh Moodley, 2009-03-13 The book explains why a Gauteng valley is called the Cradle of Humankind It presents information about the famous finds that archaeologists have discovered there A sequence diagram with text shows how fossils are formed A full page map indicates where different artefacts were found *Envisioning the Past* Sam Smiles, Stephanie Moser, 2008-04-15 *Envisioning the Past* Archaeology and the Image is a groundbreaking collection of original essays that brings together archaeologists art historians and anthropologists to provide new perspectives on the construction of knowledge concerning the antiquity of man Covers a wide variety of time periods and topics from the Renaissance and the 18th century to the engravings photography and virtual realities of today Questions what we can learn from considering the use of images in the past and present that might guide our responsible use of them in the future Available within the prestigious New Interventions in Art History series published in connection with the Association of Art Historians *Rethinking Evolution in the Museum* Monique Scott, 2007-11-19 *Rethinking Evolution in the Museum* explores the ways diverse natural history museum audiences imagine their evolutionary heritage In particular the book considers how the meanings constructed by audiences of museum exhibitions are a product of dynamic interplay between museum iconography and powerful images museum visitors bring with them to the museum In doing so the book illustrates how the preconceived images held by museum audiences about anthropology Africa and the museum itself strongly impact the human origins exhibition experience Although museological theory has come increasingly to recognize that museum audiences make meaning in exhibitions or make their own complex interpretations of museum exhibitions few scholars have explicitly asked how *Rethinking Evolution in the Museum* however provides a rare window into visitor perceptions at four world class museums the Natural History Museum and Horniman Museum in London the National Museums of Kenya in Nairobi and the American Museum of Natural History in New York Through rigorous and novel mixed methods quantitative and qualitative covering nearly 500 museum visitors this innovative study shows that audiences of human origins exhibitions interpret evolution exhibitions through a profoundly complex convergence of personal political intellectual emotional and cultural interpretive strategies This book also reveals that natural history museum visitors often

respond to museum exhibitions similarly because they use common cultural tools picked up from globalized popular media circulating outside of the museum One tool of particular interest is the notion that human evolution has proceeded linearly from a bestial African prehistory to a civilized European present Despite critical growths in anthropological science and museum displays the outdated Victorian progress motif lingers persistently in popular media and the popular imagination Rethinking Evolution in the Museum sheds light on our relationship with natural history museums and will be crucial to those people interested in understanding the connection between the visitor the museum and media culture outside of the museum context **Human origin sites and the World Heritage Convention in Asia** Sanz, Nuria, 2014-10-27 *Sterkfontein*

Amanda Esterhuysen, 2007 Sterkfontein provides an easy to read overview of the geological and fossil history of the Sterkfontein Valley in the Cradle of Humankind World Heritage Site Most famous for Mrs Ples and Little Foot the Sterkfontein Caves have produced more australopithecines than any other site in the world since excavations began in the 1930s The fossil record comprising thousands of animals plants and hominids is simply presented and current debates are explained An overview of the pioneers in the field and of the role played by the discovery of gold provides an informative historical context to the early discoveries while the use of visual markers from Sterkfontein Caves enables visitors to identify essential features and formations Amanda Esterhuysen is a lecturer in archaeology at the University of the Witwatersrand South Africa
