## **Cranes Their Biology Husbandry And Conservation:**

**Cranes** ,1996      **Cranes, Their Biology, Husbandry, and Conservation** George F. Gee,Claire M. Mirande,1996-01-01      **The Cranes** Curt Meine,George Archibald,1996 The Cranes are among the most ancient and distinctive families of birds on Earth yet they are among the world s most threatened groups of birds This Action Plan describes the many different sorts of threats facing cranes especially as they migrate through different countries and the many solutions that have been attempted to overcome them It is intended for all those involved in crane conservation including conservation biologists conservation organizations other non governmental organizations inter national development agencies political civic and business leaders funding agencies and foundations educators and members of the general public      Cranes: Their Biology, Husbandry, and Conservation, 1996 ,      **Reproductive Science and Integrated Conservation** W. V. Holt,2003 Reproduction is essential to the continuation and evolution of life on this planet and is therefore a centrally important process in the conservation of wildlife However reproductive mechanisms are well understood in only a handful of vertebrate species mostly domestic livestock and laboratory animals This means that attempts to develop and implement management policies for wildlife conservation and especially for endangered species that by definition are difficult to study are often based on poor data or no data at all In Reproductive Science and Integrated Conservation leading authorities provide glimpses of reproductive diversity in fishes amphibia reptiles birds and mammals Conservation plans are founded on the assumption that reproduction will be successful but what if it fails This book reviews the many factors that influence reproduction including genetics behaviour and nutrition and experts assess the potential conservation relevance of the recent rapid advances in reproductive technology and medicine      **Whooping Cranes: Biology and Conservation** ,2018-09-04 Whooping Cranes Biology and Conservation covers one of the most endangered birds in North America and the subject of intense research and highly visible conservation activity The volume summarizes current biological information on Whooping Cranes and provides the basis for future research necessary for conservation of this species This edited volume concentrates on work completed in the past 20 years in the areas of population biology behavior and social structure habitat use disease and health captive breeding and Whooping Crane conservation Much of the information presented comes from the study and management of remnant and reintroduced populations of Whooping Cranes in the field some information is from experimentation and breeding of captive Whooping Cranes Whooping Cranes Biology and Conservation seeks to inform and galvanize action dedicated to meeting the challenges faced by Whooping Crane managers and conservationists Thus it describes one model of endangered species conservation and restoration that will interest a wide audience professionals that work on cranes researchers in the fields of small population biology endangered species and avian ecology wildlife veterinarians and those involved in avian husbandry administrators of management agencies or conservation organizations conservationists in other fields teachers of conservation biology or ornithology and

their students and the educated general public Presents a comprehensive treatment of the biology and ecology of Whooping Cranes including biology of both remnant and reintroduced populations of Whooping Cranes Describes efforts over the past 45 years on conservation and the challenges of reintroducing an endangered species Includes chapters from a variety of disciplinary and scale perspectives ranging from evolution to population ecology behavior habitat use large landscape conservation conflict and conservation efforts Features contributions that are readable yet technically complete and fully referenced Provides an example of partnership and collegial action that integrates information produced by scientific research and operational wildlife management Edited and written by the leading Whooping Crane scholars and practitioners focused on this high profile species of conservation concern      **Handbook of Avian Medicine E-Book** Thomas N.

who are engaged in the study of animal behavior by presenting their theoretical ideas and research to their colleagues and to those in neighboring fields We hope that the series will continue its contribution to the development of the field as its intended role was phrased in the Preface to the first volume in 1965 Since that time traditional areas of animal behavior have achieved new vigor by the links they have formed with related fields and by the closer relationship that now exists between those studying animal and human subjects

Conservation Biology of Hawaiian Forest Birds Thane K. Pratt, Carter T. Atkinson, Paul C. Banko, Bethany L. Woodworth, James D. Jacobi, 2009-01-01 Hawaii's forest bird community is the most insular and most endangered in the world and serves as a case study for threatened species globally Ten have disappeared in the past thirty years nine are critically endangered and even common species are currently in decline Thane K Pratt his coeditors and collaborators all leaders in their field describe the research and conservation efforts over the past thirty years to save Hawaii's forest birds They also offer the most comprehensive look at the reasons for these extinctions and attempts to overcome them in the future Among the topics covered in this book are trends in bird populations environmental and genetic factors limiting population size avian diseases predators and competing alien bird species Color plates by award winning local photographer Jack Jeffrey illustrate all living species discussed or described

**Bird Ecology and Conservation** William J. Sutherland, Ian Newton, Rhys Green, 2004-06-17 Outlining the main methods and techniques available to ornithologists this book brings together in one authoritative source contributions containing information on avian ecology and conservation

**Reproductive Sciences in Animal Conservation** William V. Holt, Janine L. Brown, Pierre Comizzoli, 2014-08-04 Reproductive biology is more than the development of techniques for helping with too little or too much breeding While some of the relevant techniques are useful for individual species technical developments have to be backed up by thorough biological understanding of the background behind the problems This book is therefore threefold 1 it provides a snapshot of the state of the art in terms of species specific reproductive technologies whether for individual animals or whole taxonomic groups 2 it sets the reproductive problems in context and emphasizes the links between animal based problems and the wider world e.g. reproductive fitness and 3 it looks forward and presents realistic assessments of how effective some of the more recently developed techniques in reproductive technology might be at combating extinctions This is a wide ranging book that will be relevant to anyone involved in reproductive biology or in species conservation and provides provide them some useful perspectives about the real utility of current and emerging technologies It has contributions from experts in reproduction and related fields

Exploring Studbooks for Wildlife Management and Conservation F.P.G. Princée, 2016-12-20 Many endangered species of wild animals are managed in captivity through studbooks In this book these data rich resources are mined in innovative integrated and statistically tested ways to maximise information gain for conservation practice whether for captive or released reintroduced or managed wild populations This book is thus an important tool for all species managers and for students and researchers in small population biology and

wildlife conservation The book's studbook analyses are grouped in three interrelated sections natural history demography and genetics Statistical tests to determine the significance of results or to compare results between subgroups are undertaken throughout Real studbooks of a variety of species e.g. cranes wolverines blesbok illustrate the practical applications and interpretations of the analyses and statistics The natural history section presents analyses to determine baseline species information such as litter size inter birth interval longevity and seasonality Demography covers census style analyses age class based life tables comparative survival analyses and population projections Solutions for dealing with small sample sizes are included Inbreeding depression and unconscious selection form the main focus of the genetics section Survival and life table analyses are used to assess inbreeding effects Quantitative genetics methods are applied to natural history traits as a tool to monitor genetic variation A fourth section on conservation shows how data from captive populations can be used where natural history data from wild populations are missing A real example uses studbook data to inform Population Viability Analysis The final section deals with issues related to incomplete and missing data and statistical topics The purpose written open source software programs Population Management Library PML and studbookR used for analyses in the book are available at [www.princee.com](http://www.princee.com)
