[Towards a Global Music Theory](#) Mark Hijleh, 2016-02-24 Since the beginning of the twentieth century the cross pollenization of world musical materials and practices has accelerated precipitously due in large part to advances in higher speed communications and travel We live now in a world of global musical practice that will only continue to blossom and develop through the twenty first century and beyond Yet music theory as an academic discipline is only just beginning to respond to such a milieu Conferences workshops and curricula are for the first time beginning to develop around the theme of world music theory as students teachers and researchers recognize the need for analytical concepts and methods applicable to a wider range of human musics not least the hybrid musics that influence and increasingly define more and more of the world s musical practices Towards a Global Music Theory proposes a number of such concepts and methods stemming from durational and acoustic relationships between twos and threes as manifested in various interrelated aspects of music including rhythm melody harmony process texture timbre and tuning and offers suggestions for how such concepts and methods might be

applied effectively to the understanding of music in a variety of contexts While some of the bases for this foray into possible methods for a twenty first century music theory lie along well established acoustical and psycho acoustical lines Dr Mark Hijleh presents a broad attempt to apply them conceptually and comprehensively to a variety of musics in a relevant way that can be readily apprehended and applied by students scholars and teachers

Music Theory and Natural Order from the Renaissance to the Early Twentieth Century Suzannah Clark, Alexander Rehding, 2001 Music theory of almost all ages has relied on nature in its attempts to explain music The understanding of what nature is however is subject to cultural and historical differences In exploring ways in which music theory has represented and employed natural order since the scientific revolution this volume asks some fundamental questions not only about nature in music theory but also the nature of music theory In an array of different approaches ranging from physical acoustics to theology and Lacanian psychoanalysis these essays examine how the multifarious conceptions of nature located variously between scientific reason and divine power are brought to bear on music theory They probe the changing representations and functions of nature in the service of music theory and highlight the ever changing configurations of nature and music as mediated by the music theoretical discourse

training that examines the study of traditional theory through the art of improvisation The book follows the same general progression of diatonic to non diatonic harmony in conventional approaches but integrates improvisation composition keyboard harmony analysis and rhythm Conventional approaches to basic musicianship have largely been oriented toward study of common practice harmony from the Euroclassical tradition with a heavy emphasis in four part chorale writing The author's entirely new pathway places the study of harmony within improvisation and composition in stylistically diverse format with jazz and popular music serving as important stylistic sources Supplemental materials include a play along audio in the downloadable resources for improvisation and a companion website with resources for students and instructors

Schenker's Argument and the Claims of Music Theory Leslie David Blasius, 1996-10-03 Heinrich Schenker's theoretical and analytical works claim to resubstantiate the unique artistic presence of the canonic work and thus reject those musical disciplines such as psychoacoustics and systematic musicology which derive from the natural sciences In this respect his writing reflects the counter positivism endemic to the German academic discourse of the first decades of the twentieth century The rhetoric of this stance however conceals a sophisticated programme wherein Schenker situates his project in relation to these sciences arguing his reading of the musical text as a synthesis of a descriptive psychology and an explanatory historiography which itself embeds both paleographic and philological assumptions This book rereads Schenker's project as an attempt to reconstruct music theory as a discipline against the background of the empirical musical sciences of the later nineteenth century
