Astrophysics of Black Holes Cosimo Bambi, 2016-07-28 This book discusses the state of the art of the basic theoretical and observational topics related to black hole astrophysics It covers all the main topics in this wide field from the theory of accretion disks and formation mechanisms of jet and outflows to their observed electromagnetic spectrum and attempts to measure the spin of these objects Black holes are one of the most fascinating predictions of general relativity and are currently a very hot topic in both physics and astrophysics In the last five years there have been significant advances in our understanding of these systems and in the next five years it should become possible to use them to test fundamental physics in particular to predict the general relativity in the strong field regime The book is both a reference work for researchers and a textbook for graduate students

Audience, Agency and Identity in

Black Popular Culture Shawan M. Worsley, 2009-09-10 Audience Agency and Identity in Black Popular Culture analyses black cultural representations that appropriate anti black stereotypes Using examples from literature media and art Worsley examines how these cultural products do not rework anti black stereotypes into seemingly positive images Rather they present anti black stereotypes in their original forms and encourage audiences not to ignore but to explore them Shifting critical commentary from a need to censor these questionable images Worsley offers a complex consideration of the value of and problems with these alternative anti racist strategies in light of stereotypes persistence This book furthers our understanding of the historical circumstances that are influencing contemporary representations of black subjects that are purposefully derogatory and documents the consequences of these images

Synegub, 2017-08-18 This work examines the waters of marine ports as unique integrated aquatic ecosystems It regards marine ports as entities comprising components of natural and anthropogenic origin including pelagic periphytal and benthal subsystems Using selected Black and Azov Sea ports as examples the book discusses the hydrodynamics and water exchange which are weakened in ports

compared with open coastal zones It reflects consequences of the presence of hydrobionts and the accumulation of organic matter which are promoted by the variety of hard substrata and the absence of fishery The book is divided into five main chapters The first chapter describes the general characteristics of the marine ports at the northern coast of the Black and Azov Seas and their shipping channels Chapters 2 to 4 discuss the main abiotic and biotic peculiarities of the pelagial periphytal and benthal subsystems of those marine ports and chapter 5 deals with tropho dynamic processes in their ecosystems A concluding section reflects recommendations how the ecosystems of ports in non tidal seas may be ameliorated
