Delivering Therapeutics to the Inner Ear Peter S. Steyger, Larry Hoffman, Benjamin Shapiro, Sylvain Celanire, Stefan K. Plontke, 2021-08-17 Topic Editor Benjamin Shapiro is President and co founder of Otomagnetics Topic Editor Sylvain Celanire is a co Founder and Chief Executive Officer of PRAGMA Therapeutics All other Topic Editors declare no competing commercial interests with regards to the Research Topic subject *Inflammatory Mechanisms in Mediating Hearing Loss* Vickram Ramkumar, Leonard P. Rybak, 2018-07-18 Common forms of preventable hearing loss are drug and noise induced hearing loss which are believed to be produced by a similar mechanism The generation of reactive oxygen species appears to be a common mechanism mediating hearing loss produced by these different sources As such a number of laboratories have focused their research towards identifying the sources of ROS production in the cochlea following administration of chemotherapeutic agents or noise exposure This led to the identification of ROS generating enzymes such as xanthine oxidases nitric oxide synthase and NADPH oxidases which are activated and or induced during the development of hearing loss A consequence of these findings was the implementation of antioxidants in preclinical studies for the treatment of hearing loss These antioxidants have provided different levels of protection in animal and human studies but none of these have been approved by the US Food and Drug Administration for the treatment of hearing loss More recently it was shown that noise induced hearing loss was associated with recruitment of inflammatory cells and mediators in the cochlea This finding would suggest that noise could produce injury to the cochlea which stimulates local and or circulating inflammatory cells A similar finding was observed in the cochlea following administration of the anticancer drug cisplatin In addition our laboratory and others have provided a plausible mechanism by which noise or chemotherapeutic agents could stimulate the inflammatory response Surprisingly this mechanism involves ROS activation of transcription factors linked to inflammatory processes in the cochlea These studies have led to the use of anti inflammatory agents for the treatment of hearing loss

Preliminary studies targeting inflammatory cytokines appear especially promising in preclinical studies A primary goal of this project is to describe our current understanding of the oxidant hypothesis of noise and drug induced hearing loss and show how this relates to cochlear inflammation Several different aspects of the cochlear inflammatory process will be discussed in detail ranging from the sources of inflammatory cells chemokines inflammatory cytokines and cochlea resident immune cells Molecular pathways leading to activation of the local inflammatory process will be highlighted and treatment options will be discussed The relevance of certain clinically used anti inflammatory interventions such as trans tympanic steroids will also be discussed Furthermore we will examine recent patents focusing on the use of anti inflammatory agents for the treatment of drug and noise induced hearing loss

Neuroglia: Function and Pathology Alexei Verkhratsky, Arthur Butt, 2023-05-12

Diverse specialised neuroglial cells guarantee the development preservation and health of the central nervous system the peripheral nervous system the enteric nervous system and the special senses In the central nervous system it is the astrocytes oligodendrocytes and microglia that safeguard nerve cell function and integrity that controls all behaviours and encompasses the cerebral cortex of the brain which is the root of humanity In the peripheral nervous system Schwann cells play the leading role together with satellite glial cells of the sensory and autonomic ganglia ensuring correct communication between the organs and tissues with the brain and the spinal cord In the enteric nervous system specialised enteric glial cells maintain all aspects of gastrointestinal function Then there are distinctive glial cells of the special senses that ensure how the body perceives and reacts to its environment In pathology neuroglia strive to protect the diverse cellular components of the nervous system and are responsible for a proactive programme of posttraumatic restructuring that is aimed at recovery of life sustaining function Neuroglia Function and Pathology provides a highly original and comprehensive account of the physiology and pathophysiology of glial cells in the central and peripheral nervous systems The first part of the book provides a far reaching description of glial cell form and function from their evolution in invertebrates to their complexity in humans encompassing the developmental origin of the varied glial cell types and their diversity of morphology molecular biology and cellular physiology The second part of the book is devoted to an all embracing evaluation of glial cell pathophysiology commencing with definitive explanations of the fundamental pathologies of the main glial cell types and ending in a systematic examination of glial contributions to specific neurological diseases This book emphasises the central roles played by the different classes of neuroglial cells in the progression and outcome of neurological disorders of the central and peripheral nervous systems and highlights potential of glial cells as therapeutic targets The book contains more than 2500 key references from over 150 years of glial research and is superbly illustrated with over 350 original and explanatory full colour figures that describe the diverse characteristics and properties of glial cells in health and disease Under the same cover this book combines an authoritative reference book for research and clinical neuroscientists and at the same time serves as an instructive textbook for students of neuroscience from undergraduates to postgraduates Single volume covering

Steyger,Lisa Cunningham,Carlos Esquivel,Kelly Watts,Jian Zuo,2018-06-12 The auditory perception of sounds environmental vocal or music is one of the 5 principal senses consciously monitored by our brains and is crucial for many human endeavors as well as quality of life Loss of optimal performance in this principal sensory system leads to loss of effective communication and intimacy as well as increased risk of isolation depression cognitive decline and greater vulnerability to predators The vestibular system ensures that individuals remain upright and effectively monitor their posture within their spatial surroundings move effectively and remain focused on visual targets during motion The loss of vestibular sensitivity results in postural instability falls inability to observe the environment during motion and a debilitating incapacity to function effectively The sensory cells for both auditory and vestibular systems are located within the inner ear of the temporal bulla There are many causes of auditory and vestibular deficits including congenital or genetic events trauma aging and loud sound exposures Ototoxicity refers to damage of the auditory or vestibular structures or functions as the result of exposure to certain pharmaceuticals chemicals and or ionizing radiation exposure that damage the inner ear Ototoxicity is a major contributor to acquired hearing loss and vestibular deficits and is entirely preventable In 2009 the United States Department of Defense initiated the Hearing Center of Excellence HCE headquartered in San Antonio Texas in response to the prevalence of acquired auditory and vestibular deficits in military and veteran populations The knowledge shared in this eBook supports the HCE s mandate to improve aural protection of military and civilian populations worldwide The last few years have seen significant advances in

understanding the cellular mechanisms underlying ototoxic drug induced hearing loss and vestibular deficits In this eBook we present some of these advances and highlight gaps where further research is needed Selected articles discuss candidate otoprotective agents that can ameliorate the effects of ototoxicity in the context of how they illustrate cellular mechanisms of ototoxicity Our goal in illustrating these advances in mechanisms of ototoxicity is to accelerate the development of clinical therapies that prevent or reverse this debilitating disorder **Cumulated Index Medicus** ,1970 **Archives of Otology**
