Wintrobe's Clinical Hematology John P. Greer, 2009 Now available in a thoroughly revised Twelfth

Edition Wintrobe's Clinical Hematology continues to be an industry leader with its ability to correlate basic science with the clinical practice of hematology. With the first edition of Wintrobe's Clinical Hematology published in 1942, clearly establishing hematology as a distinct subspecialty of Internal Medicine, the latest edition continues the influence of the Wintrobe name and helps to set this book apart from the competition. With its strong focus on the clinical aspects of hematology, the book has generated a strong following among internists and general practitioners who want a single resource to consult for their patients who present any blood-related disorder. The Twelfth Edition is in full color for the first time, boasts a new editorial team, and includes expanded coverage of new medications and four new chapters on Newborn Anemias, Pathology of LHC Spleen Tumors, and Myeloproliferative Disorders and Mast Cell Disease. A companion Website will offer the fully searchable text and an image bank.

Cerebrovascular Bibliography, 1966 *Hemostasis and Thrombosis* Robert W. Colman, 2006 The pre-eminent reference on coagulation disorders is now in its thoroughly updated Fifth Edition. Written by more than 160 of the world's foremost authorities, this encyclopedic volume integrates basic science and clinical practice and details all that is currently known about blood clotting disorders and how to manage patients with these and related problems. This edition has been reorganized into smaller, more tightly focused chapters to help readers find information easily. A new co-editor, Samuel Z. Goldhaber MD, has expanded the cardiology portion of the book. Other new features include a two-color page design and more than 100 full-color illustrations.

Neoplastic Diseases of the Blood Peter H. Wiernik, 2003-06-09 In this fourth edition of the classic work on malignant blood cancers, the team of editors and over 100 international leaders in the field provide a comprehensive text on the diagnosis and treatment of all hematologic malignancies, both common and rare. The sixty-two chapters are divided into sections on Chronic Leukemias and Related Disorders, Acute Leukemias, Myeloma and Related Disorders, Lymphomas, and Supportive Care, with a devoted editor for each section. This extensively revised and updated edition reflects the tremendous progress in the science and treatment of hematologic malignancies during the eight years since the third edition in 1995. Revisions and new chapters include coverage of stem cell transplantation, molecular genetics, monoclonal antibodies, and new treatment modalities. The excellent discussions of current therapies for all hematologic neoplasms are more detailed than those in general oncology or hematology texts, making this an essential reference for all hematologists and oncologists.
