God Meric Srokosz, Rebecca S. Watson, 2017-11-30 The ocean dominates the surface of the earth and is in the pages of the Bible too The Bible offers a view of the sea and the life it supports which affirms its intrinsic value to God as a good and indeed essential part of creation At the same time it also speaks perceptively of the sea s vulnerability to damage and change The Bible s focus on the sea raises questions about economics and the interconnectedness of communities whilst further references to the sea raise questions about our human centredness and spirituality and about our fear of chaos and disaster In a unique collaborative project the oceanographer Meric Srokosz and the biblical scholar Rebecca Watson not only offer environmental insights on the sea but also connect the ocean with other key issues of broader concern spirituality economics chaos and our place in the world Each chapter concludes with ideas for discussion and reflection and for suggested actions in the light of the issues raised The book will present a fresh new lens through which to view the Bible and as such inform biblical scholars students and preachers alike **Our Big Blue Planet** Lynn M. Robinson,2007 Our Blue Planet: An Introduction to Maritime and Underwater

Archaeology Ben Ford, Jessi J. Halligan, Alexis Catsambis, 2020-04-07 Our Blue Planet provides a comprehensive introduction to the field of maritime and underwater archaeology. Situating the field within the broader study of history and archaeology, this book advocates that an understanding of how our ancestors interacted with rivers, lakes, and oceans is integral to comprehending the human past. Our Blue Planet covers the full breadth of maritime and underwater archaeology, including formerly terrestrial sites drowned by rising sea levels, coastal sites, and a wide variety of wreck sites ranging across the globe and spanning from antiquity to World War II. Beginning with a definition of the field and several chapters dedicated to the methods of finding, recording, and interpreting submerged sites, Our Blue Planet provides an entry point for all readers, whether or not they are familiar with maritime and underwater archaeology or archaeology in general. The book then shifts to a thematic approach with chapters exploring human interactions with the watery world both along the coasts and by ship. These chapters discuss the relationships between culture, technology, and environment that allowed humans through time to spread across the globe. Because ships were the primary means for humans to interact with large bodies of water, they are the focus of several chapters on the development of shipbuilding technology, the lives of sailors, and the uses of ships in exploration, expansion, and warfare. The book ends with chapters on how and why the non-renewable submerged archaeological record should be managed so that both current and future generations can learn from the achievements and failures of past societies, as well as on how anyone can become involved in maritime and underwater archaeology. Throughout, the reader benefits from the personal reflections of a number of leading figures in the field. *Blue Planet, Red and Green*

Photosynthesis Stephen Christopher Maberly, Brigitte Gontero, 2022-06-01 This book describes the mechanisms that allow aquatic photosynthetic organisms to contribute about half of the global primary productivity in order to mitigate climate change by sequestering carbon dioxide and producing oxygen. They transform the original anoxic atmosphere of the Earth over geological time. Aquatic photosynthesis is performed by a wide diversity of organisms, predominantly involving cyanobacteria and algae derived from the red lineage, unlike terrestrial primary productivity which is restricted to green lineage plants. *Blue Planet, Red and Green* Photosynthesis describes how, in order to maximize productivity, aquatic primary producers have evolved a series of structures and mechanisms that increase the limiting supply of carbon dioxide to the enzyme Rubisco, which is responsible for carbon dioxide fixation. This book covers the molecular mechanisms involved in aquatic carbon uptake and the global consequences as humankind alters the blue planet. *The Hatchling and The Human*

Nick Oud, 2011-01-27 This is an interesting tale, so keep your mind open to all possibilities. So please enjoy as we find out how the twists and turns in the lives of Evyonne and Addum lead to an unlikely union between two people and the intense and true love that they find in each other. This helped them stay united when they found out that they were linked in the most unbelievable way to space travellers or aliens who were known as the Gret race of beings by all others who roamed the known universe as they did, and how the lovers had to convince the Grets to stop the destruction of the Earth and all life on it.

Their task made even harder as the Grets had contempt for the continuously warring Humans who had only ever managed to rack up eight days of world peace in the whole time that the Grets had been taking more notice of the Blue Planet or the Earth as the Humans called it ever since the Blue Planet had cooled enough to start to support life That eventually included the Humans So the questions for Evyonne and Addum were as follows Was their love for all life and each other enough Could they really convince Joewell the elder of the Grets that the Earth and all life should not be destroyed So read on to see how the amazing symbiotic love affair between two such seemingly different people whose love breached all the boundaries was able to change the way the Grets viewed the Humans But could the Humans change their warring ways and realise the truth that peace is cool
