Blindsight And The Nature Of Consciousness:

Blindsight and the Nature of Consciousness Jason Holt, 2003-02-26 Ever since its discovery nearly thirty years ago the phenomenon of blindsight vision without visual consciousness has been the source of great controversy in the philosophy of mind psychology and the neurosciences Despite the fact that blindsight is widely acknowledged to be a critical test case for theories of mind **Blindsight and the Nature of Consciousness** is the first extended treatment of the phenomenon from a philosophical perspective Holt argues against much received wisdom for a thorough going materialism the view not only that mental states are brain states but much more controversially that mental properties are physical as well Designed not only for philosophers and scientists **Blindsight and the Nature of Consciousness** has something to say to anyone interested in the mystery of the human mind and in how philosophers and scientists are working toward solving that mystery **The Nature**

of Consciousness Ned Block, Owen Flanagan, Guven Guzeldere, 1997-09-10 Intended for anyone attempting to find their way through the large and confusingly interwoven philosophical literature on consciousness this reader brings together most of the principal texts in philosophy and a small set of related key works in neuropsychology on consciousness through 1997 and includes some forthcoming articles Its extensive coverage strikes a balance between seminal works of the past few decades and the leading edge of philosophical research on consciousness As no other anthology currently does **The Nature of Consciousness** provides a substantial introduction to the field and imposes structure on a vast and complicated literature with sections covering stream of consciousness theoretical issues consciousness and representation the function of consciousness subjectivity and the explanatory gap the knowledge argument qualia and monitoring conceptions of consciousness Of the 49 contributions 18 are either new or have been adapted from a previous publication *The Bodily*

Nature of Consciousness Kathleen V. Wider, 2018-05-31 In this work Kathleen V Wider discusses Jean Paul Sartre s analysis of consciousness in *Being and Nothingness* in light of recent work by analytic philosophers psychologists and neuroscientists She brings together phenomenological and scientific understandings of the nature of consciousness and argues that the two approaches can strengthen and support each other Work on consciousness from two very different philosophical traditions the continental and analytic contributes to her explanation of the deep seated intuition that all consciousness is self consciousness

The New Cognitive Neurosciences Michael S. Gazzaniga, 2000 This second edition reflects the many advances that have taken place in this field particularly in imaging and recording techniques The majority of the chapters in this edition of **The Cognitive Neurosciences** are new and those from the first edition have been rewritten and updated

The Nature of Consciousness Susan Pockett, 2000-09 Book Description Few books about consciousness get to the nitty gritty as quickly as this one By the end of the preface the essence of the novel hypothesis that is at the heart of the book is clear The reader is then taken on a stimulating intellectual journey that ranges from ancient Hindu religious texts to the most up to the minute papers in the neuroscience literature as the author supports and defends the hypothesis If you have any

interest at all in the academic field of consciousness studies don't miss this book

The Nature of Consciousness: A Simple Guide to Big Ideas Nova Martian, 2025-05-26 In *The Nature of Consciousness: A Simple Guide to Big Ideas* readers are invited on an accessible thorough journey through one of humanity's deepest mysteries. The book opens by grounding the reader in the meaning and importance of consciousness deftly addressing myths, historical perspectives and the elusive puzzle of subjective experience. Through approachable explanations it reveals why consciousness matters on both individual and societal levels demonstrating its central role in shaping how we perceive, act and relate to the world around us. Building on this foundation the guide surveys the scientific and philosophical landscapes with clarity and rigor. From the basic workings of the brain and the neurological roots of awareness to philosophical debates like dualism, the mind-body problem and panpsychism each chapter explores competing theories and ongoing mysteries with an even hand. The book also traces the development and evolution of consciousness comparing its expression across species, life stages and cultures while probing the boundaries of human uniqueness, altered states and disorders of consciousness. Drawing the inquiry into the present and future the book considers cutting edge themes such as the relationship between consciousness and artificial intelligence, the power of introspection and meditation and the emerging tools shaping modern research. Ethical dilemmas, societal impacts and open questions are tackled alongside practical applications inviting readers to reflect not only on what consciousness is but on what it might become. Designed as a comprehensive yet approachable guide this book is ideal for curious minds seeking both a big picture overview and a nuanced understanding of the nature of consciousness.

The Reflexive Nature of Consciousness Greg Janzen, 2008 Combining phenomenological insights from Brentano and Sartre but also drawing on recent work on consciousness by analytic philosophers this book defends the view that conscious states are reflexive and necessarily so, i.e. that they have a built-in implicit awareness of their own occurrence such that the subject of a conscious state has an immediate non-objectual acquaintance with it. As part of this investigation the book also explores the relationship between reflexivity and the phenomenal or what-it-is-like dimension of conscious experience defending the innovative thesis that phenomenal character is constituted by the implicit self-awareness built into every conscious state. This account stands in marked contrast to most influential extant theories of phenomenal character including qualia theories according to which phenomenal character is a matter of having phenomenal sensations and representationalism according to which phenomenal character is constituted by representational content.

Series A Conscious and Unconscious Mentality Juraj Hvorecký, Tomáš Marvan, Michal Polák, 2023-11-23 In this collection of essays experts in the field of consciousness research shed light on the intricate relationship between conscious and unconscious states of mind. Advancing the debate on consciousness research this book puts centre stage the topic of commonalities and differences between conscious and unconscious contents of the mind. The collection of cutting edge chapters offers a breadth of research perspectives with some arguing that unconscious states have been unjustly overlooked and deserve recognition for their richness and wide scope.

Others contend that significant differences between conscious and unconscious states persist highlighting the importance of their distinct characteristics Explorations into the nature of the transition from unconscious to conscious mind further complicate the picture with some authors questioning whether a sharp divide between unconscious and conscious states truly exists Delving into ontological epistemological and methodological issues this thought provoking text challenges established paradigms and paves the way for a reimagining of consciousness research It does so in an understandable and accessible way making this a perfect companion for both experts and students of philosophy psychology and related fields Chapters 2 4 9 10 14 and 16 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

The Nature of Consciousness Mark Rowlands, 2001-10-11 In *The Nature of Consciousness* Mark Rowlands develops an innovative account of the nature of phenomenal consciousness one that has significant consequences for attempts to find a place for it in the natural order The most significant feature of consciousness is its dual nature consciousness can be both the directing of awareness and that upon which awareness is directed Rowlands offers a clear and philosophically insightful discussion of the main positions in this fast moving debate and argues that the phenomenal aspects of conscious experience are aspects that exist only in the directing of experience towards non phenomenal objects a theory that undermines reductive attempts to explain consciousness in terms of what is not conscious His book will be of interest to a wide range of readers in the philosophy of mind and language psychology and cognitive science

The Physical Nature of Consciousness Philip Van Looke, 2001-04-12 *The Physical Nature of Consciousness* contains twelve chapters that discuss recent and new perspectives on the relation between modern physics and consciousness Stuart Hameroff opens with an extended and updated exposition of the Penrose Hameroff Orch OR model and subsequently addresses recent criticisms of quantum approaches to the brain Evan Walker presents his view on consciousness from the perspective of a new approach to the integration of quantum theory and relativity Friedrich Beck elaborates on the Beck Eccles quantum approach to consciousness Karl Pribram puts the holographic view on consciousness in perspective of his life long work Peter Marcer and Edgar Mitchell explain the relevance of quantum holography for consciousness Gordon Globus discusses the relation between postmodern philosophical theories and quantum consciousness Chris Clarke develops a theory in terms of a specific type of formal logic to reconcile the phenomenology of consciousness with the physical world Ilya Prigogine summarizes his view on complexity and on the future of quantum theory which goes beyond the present formalism and goes on to comment on the problem of consciousness Matti Pitkanen identifies the place for consciousness in a unifying topological geometro dynamics theory Colin McGinn argues against classical materialism Dick Bierman gives an overview of anomalous phenomena He identifies a decline effect and discusses different possible interpretations Philip Van Looke closes the volume with a discussion on how deep teleology in cellular systems may relate to consciousness Series A

Consciousness Inside and Out: Phenomenology,

Neuroscience, and the Nature of Experience Richard Brown, 2013-08-23 This volume is product of the third online consciousness conference held at <http://consciousnessonline.com> in February and March 2011 Chapters range over epistemological issues in the science and philosophy of perception what neuroscience can do to help us solve philosophical issues in the philosophy of mind what the true nature of black and white vision pain auditory olfactory or multi modal experiences are to higher order theories of consciousness synesthesia among others Each chapter includes a target article commentaries and in most cases a final response from the author Though wide ranging all of the papers aim to understand consciousness both from the inside as we experience it and from the outside as we encounter it in our science The Online Consciousness Conference founded and organized by Richard Brown is dedicated to the rigorous study of consciousness and mind The goal is to bring philosophers scientists and interested lay persons together in an online venue to promote high level discussion and exchanging of views ideas and data related to the scientific and philosophical study of consciousness

Idea of Consciousness Max R. Bennett, 2020-07-26 The Idea of Consciousness examines the problem of how the working of synaptic connections might give rise to consciousness and describes the current neuroscientific concepts and techniques used to identify and explore those parts of the brain that may be involved This book will serve as an invaluable and stimulating introduction to the subject Beautifully illustrated it is a must for anyone who is curious about consciousness

Neural Substrates of Memory, Affective Functions, and Conscious Experience C. Loeb, G. F. Poggio, 2012-12-06 It is important indeed necessary we believe that the study of the higher brain functions be introduced by a brief account of the evolution of the philosophical thinking and scientific researches on cognition The intuition that sensations and intelligence reside in the brain goes back to the Egyptians in particular the Edwin Smith papyrus probably dated between 2500 and 3000 b c where the term brain appears for the first time and where there is a description of its coverings meninges and circumvolutions Walsh 1994 The philosophical debate on brain and mind made its appearance in ancient Greece and in subsequent centuries developed among the philosophers The flow of sensations the process of thinking and the site of reason were localized in the brain

according to Alcmaeon of Croton sixth to fifth centuries b c and subsequently Lattanzio Alexander of Tralles Democritus Anaxagoras and particularly Hippocrates 460 377 b c who placed the soul envisaged as a mental function in the brain Plato 427 347 b c believed that the brain provided the sensory experiences hearing sight smell and that from these were generated thinking and memory and the act of thinking produced the truth or episteme The formulation of the problem changes radically with Aristotle 384 322 b c who believed that the heart and not the brain was the site of passions feelings intelligence and thought Gross 1995 On the Nature of Consciousness Harry T. Hunt, 1995-01-01 Harry Hunt begins by reviewing the renewed interest in ordinary consciousness and in altered and transpersonal states of consciousness He then presents competing views of consciousness in cognition neurophysiology and animal psychology developing a view of perceptual awareness as the core of consciousness potentially shared across species *Conscious Experience* Thomas Metzinger, 1995 The contributions to this book are original articles representing a cross section of current philosophical work on consciousness and thereby allowing students and readers from other disciplines to acquaint themselves with the very latest debate so that they can then pursue their own research interests more effectively The volume includes a bibliography on consciousness in philosophy cognitive science and brain research covering the last 25 years and consisting of over 1000 entries in 18 thematic sections compiled by David Chalmers and Thomas Metzinger *Enchanted Looms* Rodney Cotterill, 1998 This beautifully written 1998 book examining consciousness and which received high praise in the reviews is now available in paperback *The Cognitive Neuroscience of Consciousness* Stanislas Dehaene, 2001 Empirical and theoretical foundations of a cognitive neuroscience of consciousness Neuronal Bases And Psychological Aspects Of Consciousness - Proceedings Of The International School Of Biocybernetics Cloe Taddei-ferretti, C Musio, 1999-05-14 For a few decades the puzzle of consciousness which for centuries was analysed by philosophers has been finding a wide interest in the scientific field where previously it was not entitled to be a member It has become one of the most debated problems in the cognitive sciences The anatomical bases neurophysiological correlates and elementary mechanisms underlying complex processes arising with consciousness have been compared with the psychological perceptive cognitive volitive emotional aspects of conscious expressions in normal and pathological conditions Various theories which attempt to fit systematically and coherently neural and psychological data have been debated proving the emergence of the phenomenon of consciousness

Philosophers of Our Times Ted Honderich, 2015 Eighteen of the world's most eminent philosophers of recent years tackle central questions of philosophy in this collection of the prestigious annual lectures given at the Royal Institute of Philosophy in London The line up of authors is stellar Simon Blackburn Ned Block Tyler Burge David Chalmers Noam Chomsky Jerry Fodor Jurgen Habermas Anthony Kenny Christine Korsgaard John McDowell Alasdair MacIntyre Thomas Nagel Derek Parfit T M Scanlon John Searle Sir Peter Strawson Bernard Williams and Mary Warnock There are six pieces on questions to do with mind perception and action four on reason and morality six range over freedom identity religion and
