Angiogenesis Assays Carolyn A. Staton, Claire Lewis, Roy Bicknell, 2007-01-11

Angiogenesis the development of new blood vessels from the existing vasculature is essential for physiological growth and over 18 000 research articles have been published describing the role of angiogenesis in over 70 different diseases including cancer diabetic retinopathy rheumatoid arthritis and psoriasis One of the most important technical challenges in such studies has been finding suitable methods for assessing the effects of regulators of the angiogenic response While increasing numbers of angiogenesis assays are being described both in vitro and in vivo it is often still necessary to use a combination of assays to identify the cellular and molecular events in angiogenesis and the full range of effects of a given test protein Although the endothelial cell its migration proliferation differentiation and structural rearrangement is central to the angiogenic process it is not the only cell type involved the supporting cells the extracellular matrix and the circulating blood with its cellular and humoral components also contribute In this book experts in the use of a diverse range of assays outline key components of these and give a critical appraisal of their strengths and weaknesses Examples include assays for the proliferation migration and differentiation of endothelial cells in vitro vessel outgrowth from organ cultures assessment of endothelial and mural cell interactions and such in vivo assays as the chick chorioallantoic membrane zebrafish corneal chamber and tumour angiogenesis models These are followed by a critical analysis of the biological end points currently being used in clinical trials to assess the clinical efficacy of anti angiogenic drugs which leads into a discussion of the direction future studies should take This valuable book is of interest to research scientists currently working on angiogenesis in both the academic community and in the biotechnology and pharmaceutical industries Relevant

disciplines include cell and molecular biology oncology cardiovascular research biotechnology pharmacology pathology and physiology

Multimodal Teaching and Learning Gunther Kress,Carey Jewitt,Jon Ogborn,Tsatsarelis Charalampos,2001-10-04 Multimodal Teaching and Learning The Rhetorics of the Science Classroom achieves the rare goal of explicating multimodality as both theory and practice This is an importantly concrete analysis derived from extended careful and interdisciplinary observation which challenges our thinking about how meaning and knowledge are shaped by our modes of communication The book appeals to a wide range of scholars and practitioners far beyond the science classroom Professor Ron Scollon Department of Linguistics Georgetown University This book takes a radically different look at communication and in doing so presents a series of challenges to accepted views on language on communication on teaching and above all on learning Drawing on extensive research in science classrooms it presents a view of communication in which language is not necessarily communication image gesture speech writing models spatial and bodily codes The action of students in learning is radically rethought all participants in communication are seen as active transformers of the meaning resources around them and this approach opens a new window on the processes of learning
