Geographic Information Systems for Transportation Harvey J. Miller, Shih-Lung Shaw, 2001 GIS data and tools are revolutionizing transportation research and decision making allowing transportation analysts and professionals to understand and solve complex transportation problems that were previously impossible Here Miller and Shaw present a comprehensive discussion of fundamental geographic science and the applications of these principles using GIS and other software tools By providing thorough and accessible discussions of transportation analysis within a GIS environment this volume fills a critical niche in GIS T and GIS literature

Between Probability and Certainty Martin Smith, 2017-11-17 Martin Smith explores a question central to philosophy namely what does it take for a belief to be justified or rational According to a widespread view whether one has justification for believing a proposition is determined by how probable that proposition is given one's evidence In the present book this view is rejected and replaced with another in order for one to have justification for believing a proposition one's evidence must normically support it roughly one's evidence must make the falsity of that proposition abnormal in the sense of calling for special independent explanation This conception of justification bears upon a range of topics in epistemology and beyond including the relation between justification and knowledge the force of statistical evidence the problem of scepticism the lottery and preface paradoxes the viability of multiple premise closure the internalist externalist debate the psychology of human reasoning and the relation between belief and degrees of belief Ultimately this way of looking at justification guides us to a new unfamiliar picture of how we should respond to our evidence and manage our own fallibility This picture is developed here

application is particularly welcome. It is mathematically rigorous but accessible to students at the advanced undergraduate or graduate levels with a rich set of exercises at the end of each chapter. This book is highly recommended for Masters or PhD level courses on the topic and is a necessity for researchers with an interest in the field. Robert L Phillips, Director of Pricing Research at Amazon. At last, a serious and comprehensive treatment of modern revenue management and assortment optimization integrated with choice modeling. In this book, Gallego and Topaloglu provide the underlying model derivations together with a wide range of applications and examples. All of these facets will better equip students for handling real world problems. For mathematically inclined researchers and practitioners, it will doubtless prove to be thought provoking and an invaluable reference. Richard Ratliff, Research Scientist at Sabre. This book, written by two of the leading researchers in the area, brings together in one place most of the recent research on revenue management and pricing analytics. New industries, ride sharing, cloud computing, restaurants, and new developments in the airline and hotel industries make this book very timely and relevant, and will serve as a critical reference for researchers. Professor Kalyan Talluri, the Munjal Chair in Global Business and Operations, Imperial College London, UK.

Logistic Regression Scott Menard, 2009-04-29. In this text, author Scott Menard provides coverage of not only the basic logistic regression model but also advanced topics found in no other logistic regression text. The book keeps mathematical notation to a minimum, making it accessible to those with more limited statistics backgrounds while including advanced topics of interest to more statistically sophisticated readers. Not dependent on any one software package, the book discusses limitations to existing software packages and ways to overcome them.

Key Features: Examines the logistic regression model in detail. Illustrates concepts with applied examples to help readers understand how concepts are translated into the logistic regression model. Helps readers make decisions about the criteria for evaluating logistic regression models through detailed coverage of how to assess overall models and individual predictors for categorical dependent variables. Offers unique coverage of path analysis with logistic regression that shows readers how to examine both direct and indirect effects using logistic regression analysis. Applies logistic regression analysis to longitudinal panel data, helping students understand the issues in measuring change with dichotomous, nominal, and ordinal dependent variables. Shows readers how multilevel change models with logistic regression are different from multilevel growth curve models for continuous interval or ratio scaled dependent variables.

Logistic Regression is intended for courses such as Regression and Correlation, Intermediate Advanced Statistics, and Quantitative Methods taught in departments throughout the behavioral, health, mathematical, and social sciences, including applied mathematics, statistics, biostatistics, criminology, criminal justice, education, political science, public health, epidemiology, psychology, and sociology.

Discrete Choice Theory of Product Differentiation Simon P. Anderson,André De Palma,Jacques-François Thisse,1992 The discrete choice approach provides an ideal framework for describing the demands for differentiated products and can be used for studying most product differentiation models in the literature By introducing extra dimensions of product heterogeneity the framework also provides richer models of firm location and product selection **BOOK JACKET**

Modelling Public Transport Passenger Flows in the Era of Intelligent Transport Systems Guido Gentile,Klaus Nökel,2016-02-03 This book shows how transit assignment models can be used to describe and predict the patterns of network patronage in public transport systems It provides a fundamental technical tool that can be employed in the process of designing implementing and evaluating measures and or policies to improve the current state of transport systems within given financial technical and social constraints The book offers a unique methodological contribution to the field of transit assignment because moving beyond traditional models it describes more evolved variants that can reproduce intermodal networks with high and low frequency services realistic behavioural hypotheses underpinning route choice time dependency in frequency based models and assumptions about the knowledge that users have of network conditionsthat are consistent

with the present and future level of information that intelligent transport systems ITS can provide The book also considers the practical perspective of practitioners and public transport operators who need to model and manage transit systems for example the role of ITS is explained with regard to their potential in data collection for modelling purposes and validation techniques as well as with regard to the additional data on network patronage and passengers preferences that influences the network management and control strategies implemented In addition it explains how the different aspects of network operations can be incorporated in traditional models and identifies the advantages and disadvantages of doing so Lastly the book provides practical information on state of the art implementations of the different models and the commercial packages that are currently available for transit modelling Showcasing original work done under the aegis of the COST Action TU1004 TransITS the book provides a broad readership ranging from Master and PhD students to researchers and from policy makers to practitioners with a comprehensive tool for understanding transit assignment models
