Debris Flows/avalanches John E. Costa, Gerald F. Wieczorek, 1987 Debris flows and debris avalanches are among the most dangerous and destructive natural hazards that affect humans They claim hundreds of lives and millions of dollars in property loss every year These 17 papers pull together recent research into new methods for mitigating the loss of life and property

Debris-flow Hazards and Related Phenomena Matthias Jakob, Oldrich Hungr, 2007-12-26 With climate change and deforestation debris flows and debris avalanches have become the most significant landslide hazards in many countries In recent years there have been numerous debris flow avalanches in Southern Europe South America and the Indian Subcontinent resulting in major catastrophes and large loss of life This is therefore a major high profile problem for the world s governments and for the engineers and scientists concerned Matthias Jakob and Oldrich Hungr are ideally suited to edit this book Matthias Jakob has worked on debris flow for over a decade and has had numerous papers published on the topic as well as working as a consultant on debris flow for municipal and provincial governments Oldrich Hungr has worked on site investigations on debris flow avalanches and rockfall with emphasis on slope stability analysis and evaluation of risks to roads in built up areas He has also developed mathematical models for landslide dynamic analysis They have invited world renowned experts to joint them in this book

Debris Flow and Debris Avalanche Hazard Analysis Arthur I. Mears, P.E., Inc, 1984 A study commissioned by the Town of Vail following the debris flows of May 1984 documenting locations in Vail most likely to experience debris flows and debris avalanches

Volcanic Debris Avalanches Matteo Roverato, Anja Dufresne, Jonathan Procter, 2020-11-16 This book presents an overview of volcanic debris avalanche deposits which are produced by partial volcanic edifice collapse a catastrophic natural phenomenon It has been 40 years since the volcanic debris avalanche associated with the 1980 eruption of Mount St Helens and our understanding of these events has grown considerably in the interim Drawing on these advances the book addresses all aspects of volcanic debris avalanches Though previously overlooked in field based geological and volcanological studies these deposits are now known to be associated with most volcanoes and volcanic areas around the world The book presents state of the art ideas on the triggering and emplacement mechanisms of these events supported by field and analogue studies as well as new simulations tools and models used to determine their physical characteristic and hazards

Avalanche Dynamics S.P. Pudasaini, Kolumban Hutter, 2007-06-30

Avalanches debris mudflows and landslides are common and natural phenomena that occur worldwide predominantly in

mountainous regions With an emphasis on snow avalanches this book sets out to provide a survey and discussion about the motion of avalanche like flows from initiation to run out An important aspect of this book is the formulation and investigation of a simple but appropriate continuum mechanical model for the realistic prediction of geophysical flows of granular material This will help the practitioners in the field to better understand the physical input and provide them with a tool for their work Originating from many lectures the authors have given over the years this instructive volume brings the reader to the forefront of research an aim also supported by an extensive bibliography of almost 500 entries Avalanche Dynamics should be accessible to and is intended for a broad readership of researchers graduate students and practitioners with backgrounds in geophysics geology civil and mechanical engineering applied mathematics and continuum physics

Deposits of Volcanic Wet Flows Thomas C. Pierson, Lee Siebert, Kevin M. Scott, 2025-03-10 This book strives to fill in the following gaps First there is no comprehensive descriptive treatment of deposits emplaced by lahars debris avalanches and muddy floods at volcanoes Second until now there has not been a comprehensive effort to describe and differentiate the full range of fragmental deposits on volcanoes the initially wet volcaniclastic mass flow and fluid flow deposits usually studied by geomorphologists and sedimentologists the initially dry pyroclastic mass flow fluid flow and tephra fall deposits studied by volcanologists and the deposits transported and deformed by flowing glacier ice that are studied by glacial geologists All these deposits are mainly composed of volcaniclastic particles are deposited on the flanks of volcanoes all these deposits are mainly composed of volcanic particles and can closely resemble one another Third all these processes have vastly different hazard implications so a means for reliable identification of past processes from deposits is critical for hazard assessment

Hydrology of Disasters V.P. Singh, 2012-12-06 The General Assembly of the United Nations passed a resolution on December 11 1987 designating the 1990s as the International Decade for Natural Disaster Reduction This resolution has served as a catalyst in promotion of international cooperation in the field of natural disaster reduction in initiation of wide ranging research activities on natural and man made disasters in development of technologies for assessment prediction prevention and mitigation through technical assistance technology transfer demonstration projects and education and training and in dissemination of information related to measures for assessment prediction prevention and mitigation of natural disasters Disasters are manifestations of environmental extremes Depending upon the type of disasters their occurrence may have short term and/or long term detrimental environmental consequences Disasters cannot be prevented altogether but their impact can be mitigated This book is an attempt to provide a discussion of hydrological aspects of the various types of natural disasters It is hoped that others will be stimulated to write more comprehensive texts on this subject of enormous importance
