*Decentralised Energy, Options and Technology* N. K. Bansal, 1993      Decentralised Energy Christoph Burger, Antony Froggatt, Catherine Mitchell, Jens Weinmann, 2020-01-14 The energy system is undergoing a fundamental transformation from fossil to renewable energy from central power plants to distributed decentralised generation facilities such as rooftop solar panels or wind parks from utilities to private residents as producers of energy and from analogue to digital This book looks at the energy transformation from two complementary angles governance and business model innovation On the one side governance is a decisive factor for the success of the transformation because it can act as an accelerator or it can delay the process On the other side entrepreneurs and corporate decision makers provide new business models for a decentralised energy world Based on best practices country studies and interviews with CEOs and founders of startups from all over the world the Global Game Changer suggests eight key principles for political decision makers to successfully implement the transformation and six core competencies for corporate decision makers to thrive in the new marketplace

**Resilien-Tech** Klaus

Thoma, 2014-10-30 The digital networks that characterise today's world together with the demographic change occurring in Germany and the growing frequency of extreme events are resulting in the emergence of the new threats that are increasing the vulnerability of our modern industrialised society. Combined with the continual diversification of safety and security risks this means that disasters are capable of causing ever more serious harm. In order to continue protecting people and infrastructure against future environmental, economic and social damage it will be necessary to firmly embed preventive measures in our society and ensure that the right lessons are learned from the past. The concept of resilience provides a holistic approach to this problem that attaches equal importance to the technological and social dimensions and helps to minimise the threats to our safety and security. Accordingly, the National Academy of Science and Engineering launched the Resilien Tech project with the aim of improving our understanding of this concept and enabling security researchers to put it to practical use. The authors of this STUDY analyse the concept of resilience from a civil security research perspective with particular emphasis on the issue of critical infrastructure protection. They also identify concrete approaches to developing resilient technological and socioeconomic systems.

**Renewables and Energy for Rural**

**Development in Sub-Saharan Africa** Maxwell Mapako, Abel Mbewe, 2013-07-18 Energy supply is a key factor in economic and social development but lack of modern energy in rural areas limits efforts to alleviate poverty and improve living standards. This book identifies the options for providing modern and improved renewables based energy to low income rural areas with special emphasis on the productive uses. In the five countries represented Botswana, Eritrea, Ethiopia, Zambia and Zimbabwe the contributors focus on the advantages of a decentralized approach to energy delivery, the role of income generating activities in attracting modern energy services to rural areas and the barriers as well as opportunities that exist in the promotion of renewable energy technologies. The African Energy Policy Research Network Afrepren has built up an enviable reputation as the Continent's foremost platform for the development of African energy professionals producing policy relevant work. This latest volume in their series of publications is a further contribution to addressing the practical energy needs of Sub-Saharan Africa.
