## **Decentralization And Coordination Of Water Resource Management:**

*Decentralization and Coordination of Water Resource Management* Douglas D. Parker, Yacov Tsur, 2011-07-08 Centralized top down management of water resources through regulations has created unnecessary economic burdens upon users. More flexible decentralized controls through the use of economic incentives have gained acceptance over the past decade. The theme of this book is the increasing efforts throughout water scarce regions to rely upon economic incentives and decentralized mechanisms for efficient water management and allocation. The book begins with a section of introductory chapters describing water systems institutions constraints and similarities in the following regions: Israel and the Middle East, Turkey, California, Florida, and Australia. Four of these regions face similar climates with wet winters and dry summers. Florida has a more even seasonal distribution of rainfall yet it uses similar management strategies in controlling groundwater demand and water quality. The book concludes with a section on water management case studies. These case studies examine issues of conflict related to both water quality and water quantity. While the case studies address both international and intranational concerns in specific regions of the world, they portray broad principles that are applicable to many regions.

**Decentralization of River Basin Management**, 2005 Decentralization and increased stakeholder involvement have been major elements of water sector reform as ways to promote sustainable and integrated resource management particularly of river basins. Based on an analytical framework for relating decentralization and stakeholder involvement to improved river basin management, this paper infers several hypotheses about factors associated with greater or lesser likelihood of success of the decentralization process using data from 83 river basins worldwide. The results suggest that physical, political, economic, financial, and institutional characteristics of the basin do affect the process and the level of performance of the decentralization. In particular, the presence of water scarcity may be a stimulus to reform uniting the stakeholders in the basin and leading to better performance. Organized user groups push for the initiation of decentralization reforms but may be associated with costs to the process and difficulty of achieving decentralization. The existence of dispute resolution mechanisms supports stakeholder involvement and improves decentralization performance where stakeholders accepted greater financial responsibility, complying with tariffs and contributing to the budget for basin management. The decentralization process and performance measures increased basins with higher percentages of their budgets from external governmental sources benefited from better stability and support, and it shows in the performance of the decentralization process.

Water Governance Decentralization in Sub-Saharan Africa Joao Mutondo, Stefano Farolfi, Ariel Dinar, 2016-02-12

This book is about the process of water management decentralization in African countries which is seen as a means of advancing river basin management at the lowest appropriate level. There are very different stages of implementing decentralization in practice. This called for research aiming to understand the following questions: i) why do some water agencies succeed more than others? ii) What are the variables involved in such reform process? iii) which variables have a

positive or a negative impact on the implementation of decentralization processes iv Which variables could be affected by policy interventions and how This study aimed to answer these questions through the following objectives i analyze the factors that have potentially affected the results of decentralization process in SSA basins and ii analyze the performance of decentralization process in SSA basins Qualitative and quantitative approaches were used The main findings are that water scarcity is a major stimulus to reform water user associations if not well prepared and trained may deter the decentralization process and being part of an existing treaty over an international basin helps foster the process Conditions improving decentralization performance include scarcity of water resources longer period of implementation bottom up creation and appropriate budgetary support *Frontiers in Water Resource Economics* Renan-Ulrich Goetz,Dolors Berga,2006-03-09 Most of the books published previously in the field of water resource eco nomics focus on particular aspects of water economics such as institutions pricing or water markets but none of them have given particular attention to methodological questions However the applied methodology within economic research has made some remarkable advances over the last 10 20 years Some of these advances are of particular interest to the field of water economics Therefore we think that a book that focusing on methodological advances within the field of water resource economics and showing how these advances can be applied in economic analysis of water issues makes a nice complement to the existing literature in this field We identified five areas where we consider the methodological advances to be of particular importance 1 asymmetric information and game theory 2 un certainty 3 space 4 water quality and 5 production and technology adoption The selected papers for the book fall entirely within these categories The book *Frontiers in Water Resource Economics* draws to a great extent on papers which were presented at the 7 Conference of the International Water and Re source Economics Consortium June 3 5 2001 held in Girona Catalonia Spain This conference was jointly organized with the 4 Conference of Environmen tal and Resource Economics by the Department of Economics University of Girona **The Design of Federalism and Water Resource Management in Canada** Steven Alexander Kennett,1992 *Integrated River Basin Management through Decentralization* Karin Kemper,William Blomquist,Ariel Dinar,2007-02-17 Drawing upon a worldwide survey of river basin organizations and in depth studies of eight river basins in a variety of locations around the globe this book examines how institutional arrangements for managing water resources at the river basin level have been designed and implemented what the impetus for these arrangements has been and what institutional features appear to be associated with greater or lesser success in river basin management *Water Resources Systems Planning and Management* Sharad K. Jain,V.P. Singh,2003-09-12 This book is divided into four parts The first part Preliminaries begins by introducing the basic theme of the book It provides an overview of the current status of water resources utilization the likely scenario of future demands and advantages and disadvantages of systems techniques An understanding of how the hydrological data are measured and processed is important before undertaking any analysis The discussion is extended to emerging techniques such as Remote Sensing GIS

Artificial Neural Networks and Expert Systems The statistical tools for data analysis including commonly used probability distributions parameter estimation regression and correlation frequency analysis and time series analysis are discussed in a separate chapter Part 2 Decision Making is a bouquet of techniques organized in 4 chapters After discussing optimization and simulation the techniques of economic analysis are covered Recently environmental and social aspects and rehabilitation and resettlement of project affected people have come to occupy a central stage in water resources management and any good book is incomplete unless these topics are adequately covered The concept of rational decision making along with risk reliability and uncertainty aspects form subject matter of a chapter With these analytical tools the practitioner is well equipped to take a rational decision for water resources utilization Part 3 deals with Water Resources Planning and Development This part discusses the concepts of planning the planning process integrated planning public involvement and reservoir sizing The last part focuses on Systems Operation and Management After a resource is developed it is essential to manage it in the best possible way Many dams around the world are losing some storage capacity every year due to sedimentation and therefore the assessment and management of reservoir sedimentation is described in details No analysis of water resources systems is complete without consideration of water quality A river basin is the natural unit in which water occurs The final chapter discusses various issues related to holistic management of a river basin **Pricing Irrigation**

**Water** Yacov Tsur, 2010-09-30 As globalization links economies the value of a country's irrigation water becomes increasingly sensitive to competitive forces in world markets Water policy at the national and regional levels will need to accommodate these forces or water is likely to become undervalued The inefficient use of this resource will lessen a country's comparative advantage in world markets and slow its transition to higher incomes particularly in rural households While professionals widely agree on what constitutes sound water resource management they have not yet reached a consensus on the best ways of implementing policies Policymakers have considered pricing water a debated intervention in many variations Setting the price right some say may guide different types of users in efficient water use by sending a signal about the value of this resource Aside from efficiency itself an important policy objective equity accessibility and implementation costs associated with the right pricing must be considered Focusing on the examples of China Mexico Morocco South Africa and Turkey Pricing Irrigation Water provides a clear methodology for studying farm level demand for irrigation water This book is the first to link the macroeconomics of policies affecting trade to the microeconomics of water demand for irrigation and in the case of Morocco to link these forces to the creation of a water user rights market This type of market reform the contributors argue will result in growing economic benefits to both rural and urban households *Integrated Water Resources*

*Management in Latin America* Asit K. Biswas, Benedito P.F. Braga, Cecilia Tortajada, Marco Palermo, 2013-09-13 It is now widely accepted that the world is likely to face a major water crisis unless the present management practices are improved very significantly Promoted extensively by donors and international institutions over the past 15 years integrated water

resources management IWRM has been assumed explicitly to be the solution for managing the limited water resources of the world. Hundreds of millions of dollars have now been spent in promoting IWRM in developing countries. However, no serious and objective analysis has ever been undertaken as to whether IWRM has made water management more efficient and equitable in any region of the world than otherwise may have been the case. This pioneering analysis indicates that IWRM has not only been unsuccessful in Latin America but also is highly unlikely to succeed in the future. The reasons and constraints for this failure are outlined. This book previously appeared as a special issue of the International Journal of Water Resources Development.

**Integrated Water-resources Management in a River-basin Context**, 2002. The main objective of the 5 day workshop was to present and discuss research being conducted by IWMI and IFPRI in selected river basins in the Asian region with financial support from the ADB through its regional technical assistance mechanism RETA. The studies conducted by the two centers share some common goals and encompass work plans and methodologies that are highly complementary and mutually supportive.

The Institutional Economics of Water R. Maria Saleth, Ariel Dinar, 2004-01-01. This publication examines issues of water sector reform and performance from the perspectives of institutional economics and political economic studies. The authors develop an alternative quantitative assessment methodology based on the principle of institutional ecology as well as data collected from 127 water experts from 43 countries and regions around the world using a cross country review of recent water sector reforms within an institutional transaction cost framework.

Decentralized Governance of Adaptation to Climate Change in Africa Esbern Friis-Hansen, 2017-07-12. Two perspectives have dominated the social science discourse on climate change adaptation. Firstly, an international narrative among UN and donor agencies of technical and financial support for planned climate change adaptation. Secondly, a significant volume of studies discuss how local communities can undertake their own autonomous adaptation. Effective and sustainable climate adaptation requires a third focus: understanding of the political processes within sub-national institutions that mediate between national and local practices. This book addresses the knowledge gap that currently exists about the role of district level institutions in Sub-Saharan Africa in providing an enabling institutional environment for rural climate change adaptation.

**Water flows up: excerpts from the proceedings of a Ministerial Roundtable Dialogue on Water-Sector Challenges, Policies and Institutional Development in Asia, Bangkok, Thailand, 22-23 May 2002.** D. J. B. N. D. Ragoda, editor, **Integrated Water Resources Management as a Governance Challenge for Countries of the Middle East with Special Focus on Yemen, Jordan and Syria** Katja Hübschen, 2011. The need for an integrated management of water resources has derived from the emerging understanding that the water crisis cannot solely be regarded as a hydrological crisis. Instead, it is frequently defined as a crisis of governance as institutional and management scarcity are hindering a sustainable, equitable and efficient use of water resources.

Integrated Water Resources Management (IWRM) is internationally accepted as a toolbox to achieve these objectives. However, implementation of the IWRM approach is still lacking, especially in developing countries.

and transitional economies This study poses the central question of what kind of governance is necessary to achieve an integrated management of water resources Evaluating the concept from a regional perspective three case studies have been conducted in Yemen Jordan and Syria to identify the main governance challenges during the IWRM process and develop strategies on how to meet them aiming to improve the practical applicability of the theoretical framework of IWRM in the Middle East

**Sustainability of Integrated Water Resources Management** Shimelis Gebriye Setegn, Maria Concepcion Donoso, 2015-09-04 The main focus of this book is sustainable management of water resources in a changing climate The book also addresses the question of how to define and measure the sustainability of Integrated Water Resources Management IWRM The sustainability of IWRM is an important issue when planning and or developing policies that consider the impact of climate change water governance and ecohydrology in the context of a more holistic approach to ensure sustainable management of water resources Sustainable IWRM is more about processes and relatively little systematic or rigorous work has been done to articulate what components are the most essential to ensure the ongoing sustainability of IWRM efforts The chapters cover topics including global prospective of IWRM allocation of environmental flows in IWRM ecohydrology water resources and environmental sustainability climate change and IWRM IWRM and water governance including social economic public health and cultural aspects climate change resiliency actions related to water resources management sustainability and tools in support of sustainability for IWRM This book will be of interest to researchers practitioners water resources managers policy and decision makers donors international institutions governmental and non governmental organizations educators as well as graduate and undergraduate students It is a useful reference for Integrated Water Resources Management IWRM ecohydrology climate change impact and adaptations water governance environmental flows geographic information system and modeling tools water and energy nexus and related topics

**Integrated development and management of water resources for productive and equitable use in the Indrawati River Basin, Nepal** Madhusudan Bhattarai, Dhruba Pant, V. S. Mishra, Hari Devkota, Shuku Pun, R. N. Kayastha, David Molden, 2002 This paper has benefited by four detailed case studies<sup>2</sup> conducted in the Indrawati river basin by IWMI Nepal and Water and Energy Commission Secretariat Nepal WECS Nepal It documents the major concerns in relation to Melamchi project on the Indrawati basin community and illustrates the preliminary assessment of major project impacts in the basin This paper particularly concentrates on the likely impacts of the water diversion project on the economic and social fronts and local water use decisions and also on the local environment The major findings of the study in the Indrawati basin are summarized below
