Deceptive Images Charles S. Liebman,2018-02-06 Deceptive Images is a profoundly thoughtful effort by a social scientist who is a participant observer in American Jewish life to come to terms with his concerns about how American Jews and Judaism have been studied and his sensitivity to the policy implications of such studies Liebman writes about what he cares deeply about as a social scientist he is able to use concepts and theories in which he has been trained although not without a sense of their limitations In the passionately argued book that results Liebman contends that those concerned with American Jews both social scientists and communal leaders have placed too much emphasis on what Jews do and too little emphasis on Judaism itself Because they have depended too much on quantitative studies to help them understand contemporary American Jews they have given too little encouragement to efforts to probe the meaning of Judaism in the lives of American Jews This stimulating volume takes exception to the notion that American Jewish life is flourishing It calls for reassessment both of the study of American Judaism and the priorities of American Jewish organizations *The Systemic Image* Inge Hinterwaldner,2023-10-31 A new conceptualization of the relationship between the systemic and the iconic in real time simulations that distinguishes among four levels of forming Computer simulations conceive objects and situations dynamically in their changes and progressions In The Systemic Image Inge Hinterwaldner considers not only the technical components of dynamic computer simulations but also the sensory aspects of the realization Examining the optic the acoustic the tactile and the sensorimotor impressions that interactive real time simulations provide she finds that iconicity plays a dominant yet unexpected role Based on this and close readings of a series of example works Hinterwaldner offers a new conceptualization of the relationship between systemic configuration and the iconic aspects in these calculated complexes Hinterwaldner discusses specifications of sensorialization necessary to make the simulation dynamic perceivable Interweaving iconicity with simulation she explores the expressive possibilities that can be achieved under the condition of continuously calculated explicit changes She distinguishes among four levels of forming the systems perspective as a process and schema that establishes the most general framework of simulations the mathematical model which marks off the boundaries of the simulation s actualization the iconization and its orientation toward the user and interaction design necessary for the full unfolding of the simulation The user makes manifest what is initially latent Viewing the simulation as an interface Hinterwaldner argues that not only does the sensorially designed aspect of the simulation seduce the user but the user also makes an impact on the simulation on the dynamic and perhaps on the iconization although not on the perspectivation The influence is reciprocal **Handbook of Research on Deception, Fake News, and Misinformation Online** Chiluwa, Innocent E.,Samoilenko, Sergei A.,2019-06-28 The growing amount of false and misleading information on the internet has generated new concerns and quests for research regarding the study of deception and deception detection Innovative methods that involve catching these fraudulent scams are constantly being perfected but more material

Gerson,2023-08-24 Plato s moral realism rests on the Idea of the Good the unhypothetical first principle of all It is this as Plato says that makes just things useful and beneficial That Plato makes the first principle of all the Idea of the Good sets his approach apart from that of virtually every other philosopher This fact has been occluded by later Christian Platonists who tried to identify the Good with the God of scripture But for Plato theology though important is subordinate to metaphysics For this reason ethics is independent of theology and attached to metaphysics This book challenges many contemporary accounts of Plato s ethics that start with the so called Socratic paradoxes and attempt to construct a psychology of action or moral psychology that makes these paradoxes defensible Rather Lloyd Gerson argues that Plato at least never thought that moral realism was defensible outside of a metaphysical framework   **The Oxford Handbook of Phenomenological Psychopathology** Giovanni Stanghellini,Matthew Broome,Andrea Raballo,Anthony Vincent Fernandez,Paolo Fusar-Poli,René Rosfort,2019 The field of phenomenological psychopathology PP is concerned with exploring and describing the individual experience of those suffering from mental disorders The Oxford Handbook of Phenomenological Psychopathology is the first ever comprehensive review of the field
