Michalsen, Nicholas Sadochnikoff, 2020-07-22 This book addresses the ethical problems that physicians have to face every day while caring for critically ill patients Advances in medical technology ageing societies worldwide and their increased demands on health care systems have on the one hand led to better care and remarkable longevity in many parts of the world On the other hand however improved treatments in many medical fields amongst others in emergency and critical care have resulted in more patients surviving with reduced quality of life This entails tradeoffs for many patients their families and the

teams caring for them At the same time health care expenditures have risen dramatically and have to be balanced against costs for other public goods Finally the humane aspects of care have often failed to keep pace with the remarkable technological strides made in recent years In this book experts in their respective fields describe compelling ethical challenges resulting from these discrepancies and discuss potential solutions The book is primarily intended for clinicians who care for two of the most vulnerable patient subpopulations those being treated in ambulances or emergency rooms and those being treated at intensive care units due in part to the fact that they may be temporarily or permanently incapacitated Core medical skills such as diagnosis and predicting outcomes as well as implementing treatment remain challenging However without adequate communication and collaboration both within the inter professional treatment teams and between the teams and the patients their families delivering excellent care is difficult at best Therefore the so called soft skills are given the attention they deserve in order to overcome the gap between technological progress and interpersonal standstill

**Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine, Volume IV** Zhongheng Zhang,Rahul Kashyap,Longxiang Su,Nan Liu,Qinghe Meng,2024-01-23 This Research Topic is the fourth volume of the series Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine Volume I Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine Volume I Volume II Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine Volume II Volume III Clinical Application of Artificial Intelligence in Emergency and Critical Care Medicine Volume III Analytics based on artificial intelligence has greatly advanced scientific research fields like natural language processing and imaging classification Clinical research has also greatly benefited from artificial intelligence Emergency and critical care physicians face patients with rapidly changing conditions which require accurate risk stratification and initiation of rescue therapy Furthermore critically ill patients such as those with sepsis acute respiratory distress syndrome and trauma are comprised of heterogeneous population The one size fit all paradigm may not fit for the management of such heterogeneous patient population Thus artificial intelligence can be employed to identify novel subphenotypes of these patients These sub classifications can provide not only prognostic value for risk stratification but also predictive value for individualized treatment With the development of transcriptome providing a large amount of information for an individual artificial intelligence can greatly help to identify useful information from high dimensional data Altogether it is of great importance to further utilize artificial intelligence in the management of critically ill patients

*structural acoustic simulation abaqus dassault systèmes* - Dec 27 2021

web structural acoustic interaction covers diverse application areas including noise transmission radiation acoustic attenuation or amplification abaqus integrates noise simulation within the finite element solver allowing fully coupled structural acoustic simulations to be performed within familiar abaqus workflows

**free and forced vibration analysis in abaqus based on the hindawi** - Jun 13 2023

web dec 31 2021 we present the main procedures of interacting with abaqus updating amatrix and rhs defining the uel element and solving the stiffness and mass matrices through eigenvalue decomposition several benchmark problems of free and forced vibration are solved to validate the proposed implementation

**vibration analysis of deep groove ball bearing with outer race defect** - Mar 30 2022

web oct 24 2016 three dimensional finite element model of the housing and outer race is simulated using commercial package abaqus cae angular position of the local defect on the outer race which changes from 0 to 315 with angular intervals 45 is investigated through the dynamic finite element model the vibration data are calculated for points
