Breast Cancer Anna M. Maslin, Trevor J. Powles, 1999. Of all cancers, probably breast cancer is one of the most emotive. Increasingly, patients with breast cancer are participating in the surgical and/or medical decision about their treatment. This involvement raises ethical issues about the rights of patients and their ability to give an informed consent. Concerns about the process of communication between the medical staff and the patient and also issues about the psychology of not only the woman with breast cancer but also the doctor. This book addresses these issues relating to shared decision making and in particular those areas where a choice of treatment option involves some degree of risk/benefit analysis. It covers the ethical principles and then looks at the evidence that women who wish to participate and who are fully informed and who have taken part in the decision making process regarding their treatment and who have a positive attitude towards their illness tend to do better in the long run. Appropriate experts have contributed sections on the different treatment options to provide a brief overview of the treatments available and highlight the issues that should be considered by the woman and the doctor in the decision making process. There is also a section on the patient's perspective and vignettes throughout to illustrate dilemmas the patient faces and the importance of communication. Written for the surgical, medical, and clinical oncologists who deal with breast cancer patients and senior nurses in breast cancer units, this book will also be of interest to trainees, practising oncologists, and the women themselves who are interested in the shared decision making process in oncology generally.

[Oxford Textbook of Shared Decision Making in Healthcare](#), 2025-08-21. Healthcare systems around the world are placing increasing importance on the relationship between patient choice and clinical decision making, with many countries having shared decision making as a central theme in their healthcare policy developments. The concept of shared decision making (SDM) in healthcare is simple: clinicians and patients work together when solving problems and making decisions. However, the context and implementation are more challenging. Written by a global team of experts, the Oxford Textbook of Shared Decision Making, fourth edition, examines from both theoretical and practical perspectives what comprises an effective decision making process, looking at the benefits and potential difficulties that arise when patients and clinicians share healthcare decisions. The first sections cover the theory, methods, and implementation of SDM. Later sections examine SDM from the viewpoints of different clinical

and surgical specialties and allied disciplines such as nursing pharmacy and midwifery Each chapter contains reflections from a patient partner with lived experience of SDM giving a truly diverse and collaborative account of how SDM can work between patients families carers and healthcare professionals Authoritative evidence based and grounded in clinical practice the Oxford Textbook of Shared Decision Making explores a very important paradigm shift in the delivery of healthcare providing thoughtful consideration and key strategies for its successful implementation *Oncology* Alfred E.
