Decomposition Spectrale Et Series Deisenestein Une Paraphase De Lecriture Progress In Mathematics Series Vol 113:

Arithmetic Geometry Clay Mathematics Institute. Summer School,2009 This book is based on survey lectures given at the 2006 Clay Summer School on Arithmetic Geometry at the Mathematics Institute of the University of Gottingen Intended for graduate students and recent Ph D s this volume will introduce readers to modern techniques and outstanding conjectures at the interface of number theory and algebraic geometry The main focus is rational points on algebraic varieties over non algebraically closed fields Do they exist If not can this be proven efficiently and algorithmically When rational points do exist are they finite in number and can they be found effectively When there are infinitely many rational points how are they distributed For curves a cohesive theory addressing these questions has emerged in the last few decades Highlights include Faltings finiteness theorem and Wiles proof of Fermat s Last Theorem Key techniques are drawn from the theory of elliptic curves including modular curves and parametrizations Heegner points and heights The arithmetic of higher dimensional varieties is equally rich offering a complex interplay of techniques including Shimura varieties the minimal model program moduli spaces of curves and maps deformation theory Galois cohomology harmonic analysis and automorphic functions However many foundational questions about the structure of rational points remain open and research tends to focus on properties of specific classes of varieties **An Introduction to Automorphic Representations** Jayce R. Getz,Heekyoung Hahn,2024-03-01 The goal of this textbook is to introduce and study automorphic representations objects at the very core of the Langlands Program It is designed for use as a primary text for either a semester or a year long course for the independent study of advanced topics or as a reference for researchers The reader is taken from the beginnings of the subject to the forefront of contemporary research The journey provides an accessible gateway to one of the most fundamental areas of modern mathematics with deep connections to arithmetic geometry representation theory harmonic analysis and mathematical physics The first part of the text is dedicated to developing the notion of automorphic representations Next it states a rough version of the Langlands functoriality conjecture motivated by the description of unramified admissible representations of reductive groups over nonarchimedean local fields The next chapters develop the theory necessary to make the Langlands functoriality conjecture precise Thus supercuspidal representations are defined locally cuspidal representations and Eisenstein series are defined globally and Rankin Selberg L functions are defined to give a link between the global and local settings This preparation complete the global Langlands functoriality conjectures are stated and known cases are discussed This is followed by a treatment of distinguished representations in global and local settings The link between distinguished representations and geometry is explained in a chapter on the cohomology of locally symmetric spaces in particular Shimura varieties The trace formula an immensely powerful tool in the Langlands Program is discussed in the final chapters of the book Simple versions of the general relative trace formulae are treated for the first time

in a textbook and a wealth of related material on algebraic group actions is included Outlines for several possible courses are provided in the Preface *Reviews in Number Theory, 1984-96* ,1997 These six volumes include approximately 20 000 reviews of items in number theory that appeared in Mathematical Reviews between 1984 and 1996 This is the third such set of volumes in number theory The first was edited by W J LeVeque and included reviews from 1940 1972 the second was edited by R K Guy and appeared in 1984 *Lie Groups* Daniel Bump,2013-10-01 This book is intended for a one year graduate course on Lie groups and Lie algebras The book goes beyond the representation theory of compact Lie groups which is the basis of many texts and provides a carefully chosen range of material to give the student the bigger picture The book is organized to allow different paths through the material depending on one s interests This second edition has substantial new material including improved discussions of underlying principles streamlining of some proofs and many results and topics that were not in the first edition For compact Lie groups the book covers the Peter Weyl theorem Lie algebra conjugacy of maximal tori the Weyl group roots and weights Weyl character formula the fundamental group and more The book continues with the study of complex analytic groups and general noncompact Lie groups covering the Bruhat decomposition Coxeter groups flag varieties symmetric spaces Satake diagrams embeddings of Lie groups and spin Other topics that are treated are symmetric function theory the representation theory of the symmetric group Frobenius Schur duality and GL n GL m duality with many applications including some in random matrix theory branching rules Toeplitz determinants combinatorics of tableaux Gelfand pairs Hecke algebras the philosophy of cusp forms and the cohomology of Grassmannians An appendix introduces the reader to the use of Sage mathematical software for Lie group computations Subject Guide to Books in Print ,1991 Mathematical Reviews ,1995 The Abel Prize 2018-2022 Helge Holden,Ragni Piene,2024-04-25 The book presents the winners of the Abel Prize in mathematics for the period 2018 2022 Robert P Langlands 2018 Karen K Uhlenbeck 2019 Hillel Furstenberg and Gregory Margulis 2020 L szlo L v sz and Avi Wigderson 2021 Dennis P Sullivan 2022 The profiles feature autobiographical information as well as a scholarly description of each mathematician s work In addition each profile contains a Curriculum Vitae a complete bibliography and the full citation from the prize committee The book also includes photos from the period 2018 2022 showing many of the additional activities connected with the Abel Prize This book follows on The Abel Prize 2003 2007 The First Five Years Springer 2010 and The Abel Prize 2008 2012 Springer 2014 as well as on The Abel Prize 2013 2017 Springer 2019 which profile the previous Abel Prize laureates Bulletin (new Series) of the American Mathematical Society ,2004 Forthcoming Books Rose Arny,1994-04 Books in Print Supplement ,1994 The Theory of Eisenstein Series and Spectral Theory for Kleinian Groups Nikolaos Harilaou Mandouvalos,University of Cambridge,University of Cambridge.
