Dedekind Sums Hans Rademacher, Emil Grosswald, 1972-12-31 These notes from Hans Rademacher's 1963 Hedrick Lectures have been gently polished and augmented by Emil Grosswald While the topic itself is specialized these sums are linked in diverse ways to many results in number theory elliptical modular functions and topology The first main result is a surprising reciprocity law that is equivalent to the law of quadratic reciprocity **Mathematical Analysis and Analytic**

Number Theory 2019 Rekha Srivastava, 2021-04-06 This volume is a collection of investigations involving the theory and applications of the various tools and techniques of mathematical analysis and analytic number theory which are remarkably widespread in many diverse areas of the mathematical biological physical chemical engineering and statistical sciences It contains invited and welcome original as well as review cum expository research articles dealing with recent and new developments on the topics of mathematical analysis and analytic number theory as well as their multidisciplinary applications **Topics in Finite Fields** Gohar Kyureghyan, Gary L. Noncommutative Geometry and Number Theory Caterina Consani, Matilde Marcolli, 2007-12-18 In recent years number theory and arithmetic geometry have been enriched by new techniques from noncommutative geometry operator

algebras dynamical systems and K Theory This volume collects and presents up to date research topics in arithmetic and noncommutative geometry and ideas from physics that point to possible new connections between the fields of number theory algebraic geometry and noncommutative geometry The articles collected in this volume present new noncommutative geometry perspectives on classical topics of number theory and arithmetic such as modular forms class field theory the theory of reductive p adic groups Shimura varieties the local L factors of arithmetic varieties They also show how arithmetic appears naturally in noncommutative geometry and in physics in the residues of Feynman graphs in the properties of noncommutative tori and in the quantum Hall effect

Using the Mathematics Literature Kristine K. Fowler, 2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathematics

The Rademacher Legacy to Mathematics George E. Andrews, David M. Bressoud, L. Alayne Parson, 1994 This book contains papers presented at the Hans Rademacher Centenary Conference held at Pennsylvania State University in July 1992 The astonishing breadth of Rademacher's mathematical interests is well represented in this volume The papers collected here range over such topics as modular forms partitions and q series Dedekind sums and Ramanujan type identities Rounding out the volume is the opening paper which presents a biography of Rademacher This volume is a fitting tribute to a remarkable mathematician whose work continues to influence mathematics today

A Tribute to Emil Grosswald: Number Theory and Related Analysis Marvin Isadore Knopp, Mark Sheingorn, 1993 Emil Grosswald was a mathematician of great accomplishment and remarkable breadth of vision This volume pays tribute to the span of his mathematical interests which is reflected in the wide range of papers collected here With contributions by leading contemporary researchers in number theory modular functions combinatorics and related analysis this book will interest graduate students and specialists in these fields The high quality of the articles and their close connection to current research trends make this volume a must for any mathematics library

Modular Functions and Dirichlet Series in Number Theory Tom M. Apostol, 2012-12-06 This is the second volume of a 2 volume textbook which evolved from a course Mathematics 160 offered at the California Institute of Technology during the last 25 years The second volume presupposes a background in number theory comparable to that provided in the first volume together with a knowledge of the basic concepts of complex analysis Most of the present volume is devoted to elliptic functions and modular functions with some of their number theoretic applications Among the major topics treated are Rademacher's convergent series for the partition function Lehner's congruences for the Fourier coefficients of the modular function $j(\tau)$ and Hecke's theory of entire forms with multiplicative Fourier coefficients The last chapter gives an account of Bohr's theory of equivalence of general Dirichlet series Both volumes of this work emphasize classical aspects of a subject which in recent years has undergone a great deal of modern development It is hoped that these volumes will help the

nonspecialist become acquainted with an important and fascinating part of mathematics and at the same time will provide some of the background that belongs to the repertory of every specialist in the field This volume like the first is dedicated to the students who have taken this course and have gone on to make notable contributions to number theory and other parts of mathematics T M A January 1976 The first volume is in the Springer Verlag series Undergraduate Texts in Mathematics under the title Introduction to Analytic Number Theory *Proceedings of Symposia in Pure Mathematics*, 1973

Combinatorial Mathematics Herbert John Ryser, 1963-12-31 Herbert J Ryser is widely regarded as one of the major figures in combinatorics in the 20th century His Combinatorial Mathematics is a classic which has enticed many young mathematics students into this area **JMSJ** Nihon Sūgakkai, 1991 *The Schwarz Function and Its Applications* Philip J. Davis, 1974-12-31 H A Schwarz showed us how to extend the notion of reflection in straight lines and circles to reflection in an arbitrary analytic arc Notable applications were made to the symmetry principle and to problems of analytic continuation Reflection in the hands of Schwarz is an antianalytic mapping By taking its complex conjugate we arrive at an analytic function that we have called here the Schwarz Function of the analytic arc This function is worthy of study in its own right and this essay presents such a study In dealing with certain familiar topics the use of the Schwarz Function lends a point of view a clarity and elegance and a degree of generality which might otherwise be missing It opens up a line of inquiry which has yielded numerous interesting things in complex variables it illuminates some functional equations and a variety of iterations which interest the numerical analyst The perceptive reader will certainly find here some old wine in relabelled bottles But one of the principles of mathematical growth is that the relabelling process often suggests a new generation of problems Means become ends the medium rapidly becomes the message This book is not wholly self contained Readers will find that they should be familiar with the elementary portions of linear algebra and of the theory of functions of a complex variable *Probabilistic Diophantine Approximation* József Beck, 2014-10-06 This book gives a comprehensive treatment of random phenomena and distribution results in diophantine approximation with a particular emphasis on quadratic irrationals It covers classical material on the subject as well as many new results developed by the author over the past decade A range of ideas from other areas of mathematics are brought to bear with surprising connections to topics such as formulae for class numbers special values of L functions and Dedekind sums Care is taken to elaborate difficult proofs by motivating major steps and accompanying them with background explanations enabling the reader to learn the theory and relevant techniques Written by one of the acknowledged experts in the field Probabilistic Diophantine Approximation is presented in a clear and informal style with sufficient detail to appeal to both advanced students and researchers in number theory [Invariants of Homology 3-Spheres](#) Nikolai Saveliev, 2013-04-17 Homology 3 sphere is a closed 3 dimensional manifold whose homology equals that of the 3 sphere These objects may look rather special but they have played an outstanding role in geometric topology for the past fifty years The book gives a systematic exposition of diverse ideas and methods in the area from

algebraic topology of manifolds to invariants arising from quantum field theories The main topics covered are constructions and classification of homology 3 spheres Rokhlin invariant Casson invariant and its extensions including invariants of Walker and Lescop Herald and Lin invariants of knots and equivariant Casson invariants Floer homology and gauge theoretical invariants of homology cobordism Many of the topics covered in the book appear in monograph form for the first time The book gives a rather broad overview of ideas and methods and provides a comprehensive bibliography It will be appealing to both graduate students and researchers in mathematics and theoretical physics *Reciprocity Laws* Franz

Lemmermeyer,2000-05-06 This book covers the development of reciprocity laws starting from conjectures of Euler and discussing the contributions of Legendre Gauss Dirichlet Jacobi and Eisenstein Readers knowledgeable in basic algebraic number theory and Galois theory will find detailed discussions of the reciprocity laws for quadratic cubic quartic sextic and octic residues rational reciprocity laws and Eisensteins reciprocity law An extensive bibliography will be of interest to readers interested in the history of reciprocity laws or in the current research in this area **A Panorama of Hungarian**

Mathematics in the Twentieth Century, I Janos Horvath,2010-06-28 A glorious period of Hungarian mathematics started in 1900 when Lip t Fej r discovered the summability of Fourier series This was followed by the discoveries of his disciples in Fourier analysis and in the theory of analytic functions At the same time Frederic Frigyes Riesz created functional analysis and Alfred Haar gave the first example of wavelets Later the topics investigated by Hungarian mathematicians broadened considerably and included topology operator theory differential equations probability etc The present volume the first of two presents some of the most remarkable results achieved in the twentieth century by Hungarians in analysis geometry and stochastics The book is accessible to anyone with a minimum knowledge of mathematics It is supplemented with an essay on the history of Hungary in the twentieth century and biographies of those mathematicians who are no longer active A list of all persons referred to in the chapters concludes the volume **Collected Papers of Hans Rademacher** Hans

Rademacher,1974 Hans Adolph Rademacher was a German born American mathematician known for work in mathematical analysis and number theory
