Deductive Logic An Introduction To Evaluation Technique And Logical Theory:

Deductive Logic David S. Clarke, Richard Behling, 1998 Deductive Logic is designed as an intermediate level text directed at upper division students from philosophy and the humanities Its focus is exclusively on deductive logic avoiding altogether topics such as informal reasoning and scientific method normally included in introductory logic courses Its exposition of logical topics is informal with emphasis on explaining the basic concepts and procedures of modern symbolic logic in the simplest and most intuitive manner possible rather than on developing a rigorous formal system and providing proofs of its properties The fact that the text presupposes a course offered to philosophy students and serves to introduce them to logic as the language of philosophy has strongly influenced the selection of topics The topics here are controversial and the problems not easily resolved but this text strives to relate the formal logical structures introduced to issues of philosophic interest

Instrumental Reasoning and Systems Methodology Richard Mattessich, 2012-12-06 This book has been written primarily for the applied and social scientist and student who longs for an integrated picture of the foundations on which his research must ultimately rest but hopefully the book may also serve philosophers interested in applied disciplines and in systems methodology If integration was the major motto the need for a methodology appropriate to the teleological peculiarities of all applied sciences was the main impetus behind the conception of the present work This need I felt a long time ago in my own area of analytical and empirical research in accounting theory and management science later I had the opportunity to teach for almost a decade graduate seminars in Methodology which offered particular insight into the methodological needs of students of such applied disciplines as business administration education engineering informatics etc Out of this effort grew the present book which among other things tries on one side to illuminate the difference and relationship between methods of cognition and methods of decision and on the other to sketch a framework suitable for depicting means end relationships in a holistic setting I believe that a systems methodology which incorporates recent endeavours of deontic logic decision theory information economics and related areas would be eminently suited to break the ground for such a future framework Yet systems theory has two major shortcomings which might prevent it from evolving into the desired methodology of applied science

Scott, 1975 **Logical Models of Legal Argumentation** H. Prakken, Giovanni Sartor, 2012-12-06 In the study of forms of legal reasoning logic and argumentation theory long followed separate tracks Legal logicians tended to focus on a deductive reconstruction of justifying a decision disregarding the dialectical process leading to the chosen justification Others instead emphasized the adversarial and discretionary nature of legal reasoning involving reasonable evaluation of alternative choices and the use of analogical reasoning Recently however developments in Artificial Intelligence and Law have paved the way for overcoming this separation Logic has widened its scope to defensible argumentation and informal accounts of analogy and dialectics have inspired the construction of computer programs Thus the prospect is emerging of an integrated logical and dialectical account of legal argument adding to the understanding of legal reasoning and providing a formal basis for computer tools that assist and mediate legal debates while leaving room for human initiative This book presents contributions to this development From a logical point of view it covers topics such as evaluating conflicting arguments weighing reasons modelling legal disputes as a dialogue game the role of the burden of proof the relation between principles rules reasons and facts and the relation between deductive and nondeductive arguments Written by leading scholars in the field and building on recent developments in logic and Artificial Intelligence the chapters provide a state of the art account of research on the logical aspects of legal argument **Fuzzy Methods for Assessment and Decision Making** Michael Gr. Voskoglou, 2024-10-08 Fuzzy Methods for Assessment and Decision Making presents the assessment of learning and problem solving skills with qualitative grades These methods are outcomes of the author's research work on the subject for more than 20 years In particular a hybrid assessment model uses the Center of Gravity COG defuzzification technique closed real intervals grey numbers neutrosophic sets and soft sets as tools The book starts with the basic mathematical background that is needed for an understanding of its contents The Rectangular Fuzzy Assessment Model

RFAM of Subbotin and Voskoglou is presented next the outcomes of which are compared to those of the GPA index The book presents innovative fuzzy assessment methods enabling readers to assess the mean and quality performance of learning or problem solving skills of a group of students when qualitative linguistic grades are used for this purpose In the case of using linguistic grades for the assessment of a group s skills the classical method of calculating the mean value of the numerical grades cannot be applied Also no safe conclusions can be obtained on comparing the quality performance of two groups when the values of their GPA index are equal Presents innovative fuzzy assessment methods to enable readers to assess the mean and quality performance of learning Discusses fuzzy logic and techniques for decision making in all domains Includes applications of fuzzy decision making as a hybrid model using soft sets grey numbers and neutrosophic sets

The Handbook of Rationality Markus Knauff, Wolfgang Spohn, 2021-12-14 The first reference on rationality that integrates accounts from psychology and philosophy covering descriptive and normative theories from both disciplines Both analytic philosophy and cognitive psychology have made dramatic advances in understanding rationality but there has been little interaction between the disciplines This volume offers the first integrated overview of the state of the art in the psychology and philosophy of rationality Written by leading experts from both disciplines The Handbook of Rationality covers the main normative and descriptive theories of rationality how people ought to think how they actually think and why we often deviate from what we can call rational It also offers insights from other fields such as artificial intelligence economics the social sciences and cognitive neuroscience The Handbook proposes a novel classification system for researchers in human rationality and it creates new connections between rationality research in philosophy psychology and other disciplines Following the basic distinction between theoretical and practical rationality the book first considers the theoretical side including normative and descriptive theories of logical probabilistic causal and defeasible reasoning It then turns to the practical side discussing topics such as decision making bounded rationality game theory deontic and legal reasoning and the relation between rationality and morality Finally it covers topics that arise in both theoretical and practical rationality including visual and spatial thinking scientific rationality how children learn to reason rationally and the connection between intelligence and rationality

Transformational Change for People and the Planet Juha I. Uitto, Geeta Batra, 2022-01-13 This Open Access book deals with the pressing question of how to achieve transformational change that reconciles development with environmental sustainability It particularly focuses on the role of evaluation in finding sustainable solutions Environment and development are closely interlinked as are human health and ecosystem health The pandemic that began in 2020 demonstrated in no uncertain terms how destruction of habitats has allowed hitherto unknown pathogens spill over to humans wreaking havoc on people's lives and livelihoods We are already seeing the impacts of global climate change in terms of heatwaves forest fires and increased storms The Sustainable Development Goals SDGs explicitly recognize the equal importance of the social economic and environmental dimensions of development In these turbulent times when humankind faces multiple complex challenges it is essential to know that our responses are effective and that they make a positive difference Evaluation can provide invaluable lessons to how we design policies strategies and programs and how we allocate limited resources between competing priorities This book brings together key thinkers and practitioners from the public and private sectors from major multilateral organizations and from bilateral donor agencies to present the latest knowledge and experience on how to evaluate interventions in the nexus of environment and development The book does not promote any particular approach or methodology but rather emphasizes the need for mixed methods to address the question at hand in the best and most suitable manner It covers cases from a variety of fields from climate change mitigation and adaptation energy efficiency and renewable energy natural resources management biodiversity conservation and more This book is not a conference proceedings although it has its roots in the Third International Conference on Evaluating Environment and Development organized by the GEF Independent Evaluation Office in October 2019 The conference brought together a larger number of established and upcoming evaluators researchers and evaluation users from the Global North and South representing a wide variety of organizations to discuss the frontiers of environment and development evaluation Following the conference the editors identified and contacted the participants who made key contributions at the conference and asked them to develop their ideas and papers into book chapters according to a coherent plan
