biology methods for elucidating associations between cancer and microbes Lihong Peng, Taoyang Wu, Fei Ma, Chuan Lu, 2024-02-01 Learning-assisted Diagnosis and Control of Electric Distribution Network Chaolong Zhang, Xiao Wang, Aihong Tang, Weihang Yan, David Gao, 2025-08-08 The digital transformation of modern power systems enables more robust and transparent system planning and operation This process is highly reliant on big data which is widely available through energy generation to utilization The distribution networks are exposed to high challenges due to the massive integration of renewables and electric vehicles at low voltages but opportunities do exist due to the widely available infrastructure for data collection and smart control at the distribution level For example the phase measurement unit PMU for better system observation in the transmission system has been extended to the distribution network where standard

protocols are available for high precision data transmission in a sub second timescale Artificial intelligence AI technologies become the main enabler to utilize these data This provides revolutionary solutions covering fault diagnosis control and almost all aspects of modern electric power systems The values of AI in distribution networks are widely recognized especially for the increased complexity of distribution systems where active management and autonomous operation are urgently needed The typical mechanism based modeling and model based control lack adaptability under an evolving environment e g network topology changes that are more frequent at the distribution level However the existing AI technologies as well as the associated machine learning algorithms cannot be directly transplanted into the area of power systems To fulfill the strict technical requirements in power systems for security generalization capability interpretability out of sample performance robustness and reliability are the main issues to be addressed before their massive deployment Therefore this Research Topic aims to provide a contribution in line with this area of research i e innovative approaches and schemes for learning assisted diagnosis and control for the medium to low voltage distribution networks Original work focusing on the applications of state of art AI technologies in the power and energy related fields are invited Both high quality Original Research and Review Articles are welcome about the latest progress and potential research applications of the relevant areas with interests in modeling control monitoring and diagnosis of the distribution network using AI related techniques

Wolfskin W.R. Gingell, 2015-05-01 If you want adventure you have to march right up to it and kick it in the shins At fourteen barefoot and running wild Rose is delighted to be apprenticed to Akiva the witch of the forest She thinks it will be all enchantment and excitement and not so much fuss about baths The reality is much more sober and practical that is until she meets a mysterious wolf in the forest and is tricked

into stepping off the path In young naive Rose Bastian sees a way of escape Cursed to remain in the shape of a wolf after running afoul of a powerful enchantress he has lived many decades under a spell and now he is both desperate and ruthless But by breaking part of Bastian s curse Rose has caught the attention of Cassandra the enchantress who cursed him and Cassandra is by no means ready to forgive and forget Meanwhile wardens have been disappearing from the forest one by one Rose is certain that Cassandra is behind the disappearances but can she and Bastian get to the bottom of the matter before Akiva disappears as well And are Bastian s motives entirely to be trusted Sometimes the little girl in the red hood doesn t get eaten and sometimes the wolf isn t the most frightening thing in the forest *Wolfskin* is the Prequel Novel to the Two Monarchies Sequence

Laurence Evans,1999-08-10 In the association of the bee and the flower is a very advanced reflection of the process of evolution through natural selection Nature s Holism explores the coevolution of long associated species arriving at a holistic view of nature where the compatibility between species is significant In nature there are two interacting forces There is the numerical increase in numbers of a species termed a force of perpetuity Increasing numbers of a single species have an inevitable impact on the environment However as each species survives within an ecological context there is a feedback from the ecosystem as numbers increase requiring a necessary compatibility with the ecosystem Fitness is therefore defined not only by quantitative representation of genes in the next generation perpetuity but also the qualitative condition of compatibility with the habitat or ecosystem that provided the conditions and resources for this success Federal Energy Regulatory Commission Reports
