The world's bestselling master of the medical thriller, Robin Cook skillfully combines human drama and high tech thrills with the latest breakthroughs and controversies of modern medicine. In *Abduction*, a mysterious transmission from the bottom of the Atlantic Ocean leads a crew of oceanographers and divers to a phenomenon beyond scientific understanding, a discovery that will change everything we know about life on Earth. **Singing Whales and Flying Squid**, Richard Ellis, 2006-01-01. Two thirds of this planet is covered by water inhabited by an incredible variety of living organisms ranging in size from microbe to whale and in abundance from scarce to uncountable. Whales and dolphins must surface to breathe and some fishes occupy surface waters and can easily be seen from boats or shore, but most of the marine bio profusion is hidden from human eyes, often under thousands of feet and millions of tons of water which is usually cold, dark, and utterly inhospitable to humans. By definition, the study of marine life has been quantitatively and qualitatively different from the study of terrestrial life; it is, if you will, a different kettle of fish. What do we know today, how have we learned it, and what remains unknown and unknowable about inner space? Because there have been so few human visitors to the uninviting world of the deep sea, scientists have had to rely on trawled specimens, photographs taken by robotic cameras, or occasionally observations from deep diving submersibles to get even the vaguest idea of the nature of life in the abyss. So far, even our most elaborate efforts to penetrate the blackness have produced only minimal results. It is as if someone lowered a collecting basket from a balloon high above the tropical rain forest floor and tried to analyze the nature of life in the jungle from a couple of random hauls. The inner space of the deep offers the last frontier on the planet. Even now we know more about the back side of the moon than we do about the bottom of the ocean, but then the surface of the moon is not hidden under miles of impenetrable water. But we do know that living in this inaccessible medium are some of the most fascinating creatures on Earth. An understanding of the interrelationships between various creatures, including the one predator that has the power to distort, damage, or even eliminate populations of marine animals, is necessary if we are to survive in harmony.

with these populations Although new technologies have given us tools to better census the whales dolphins and fishes and to see heretofore unexpected life and geological forms deep under the sea we are a long way from comprehending the nature and importance of marine biodiversity Singing Whales Flying Squid and Swimming Cucumbers is an attempt to put the search for knowledge into perspective to try to find out how we got here and where with the help of curiosity science and technology we might be headed With this as our Baedeker we will voyage through time and space tracing the history of the discovery of marine biology from the moment that the first scientists although for the most part science had barely been invented tried to figure out what sorts of creatures lived in the Mediterranean the sea right off their shores So join Richard Ellis on an underwater adventure like no other you ve ever taken or heard of a voyage to discover the mysteries and reveal the wonders of marine life more unusual and more astonishing than you or anyone else ever imagined *Literature of Travel and Exploration* Jennifer Speake,2014-05-12 Containing more than 600 entries this valuable resource presents all aspects of travel writing There are entries on places and routes Afghanistan Black Sea Egypt Gobi Desert Hawaii Himalayas Italy Northwest Passage Samarkand Silk Route Timbuktu writers Isabella Bird Ibn Battuta Bruce Chatwin Gustave Flaubert Mary Kingsley Walter Raleigh Wilfrid Thesiger methods of transport and types of journey balloon camel grand tour hunting and big game expeditions pilgrimage space travel and exploration genres buccaneer narratives guidebooks New World chronicles postcards companies and societies East India Company Royal Geographical Society Society of Dilettanti and issues and themes censorship exile orientalism and tourism For a full list of entries and contributors a generous selection of sample entries and more visit the Literature of Travel and Exploration An Encyclopedia website **The Facts on File Marine Science Handbook** Scott McCutcheon,Bobbi McCutcheon,2003 Contains a history of the subject of marine science over 1 500 entries providing definitions and explanations of related topics plus brief biographies of up to 250 scientists

*Swordfish* Richard Ellis,2013-04-15 A perfect fish in the evolutionary sense the broadbill swordfish derives its name from its distinctive bill much longer and wider than the bill of any other billfish which is flattened into the sword we all recognize And though the majesty and allure of this warrior fish has commanded much attention from adventurous sportfishers eager to land one to ravenous diners eager to taste one no one has yet been bold enough to truly take on the swordfish as a biographer Who better to do so than Richard Ellis a master of marine natural history *Swordfish A Biography of the Ocean Gladiator* is his masterly ode to this mighty fighter The swordfish whose scientific name means gladiator can take on anyone and anything including ships boats sharks submarines divers and whales and in this book Ellis regales us with tales of its vitality and strength Ellis makes it easy to understand why it has inspired so many to take up the challenge of epic sportfishing battles as well as the longline fishing expeditions recounted by writers such as Linda Greenlaw and Sebastian Junger Ellis shows us how the bill is used for defense contrary to popular opinion it is not used to spear prey but to slash and debilitate like a skillful saber fencer *Swordfish* he explains hunt at the surface as well as thousands of feet down in the
