Diffusion in Solids Helmut Mehrer, 2007-07-24 Diffusion is a vital topic in solid state physics and chemistry physical metallurgy and materials science Diffusion processes are ubiquitous in solids at elevated temperatures A thorough understanding of diffusion in materials is crucial for materials development and engineering This book first gives an account of the central aspects of diffusion in solids for which the necessary background is a course in solid state physics It then provides easy access to important information about diffusion in metals alloys semiconductors ion conducting materials glasses and nanomaterials Several diffusion controlled phenomena including ionic conduction grain boundary and dislocation pipe diffusion are considered as well Graduate students in solid state physics physical metallurgy materials science physical and inorganic chemistry or geophysics will benefit from this book as will physicists chemists metallurgists materials engineers in academic and industrial research laboratories

Defects and doping in Cu₂O Francesco Biccari, 2012-02-14 This book is the Francesco Biccari's PhD thesis in physics defended at the Sapienza University of Rome in February 2010 The thesis deals with the study of the defects and doping of cuprous oxide Cu₂O a very long studied semiconductor The interest in Cu₂O is due to its optical properties its low cost and low toxicity which make it a perfect candidate for low cost photovoltaic cells

Materials Data for Cyclic Loading Chr. Boller, T. Seeger, 2013-10-22 Materials Data for Cyclic Loading Part C High Alloy Steels provides the necessary data for a proper material assessment The book presents the data of high alloy steels that help estimate the crack initiation lives of structural parts The data sheets included in the text provide the description of the material and testing procedures along with diagrams for stress strain curves for monotonic and cyclic loading strain life curve The book also provides the results of stress and strain controlled constant amplitude tests The text will be useful to researchers and practitioners of engineering metallurgy and physics

Cyclic Deformation and Fatigue of Metals M. Bílý, 2013-10-22 An integral review is given in this book on the fatigue phenomenon covering the fundamentals of fatigue damage initiation relevant factors influencing fatigue crack propagation and fatigue life random load analysis and simulation for theoretical and experimental fatigue life assessment The entire chain of problems related to fatigue of metals and structural components is covered Specifically it describes the low cycle plastic properties and statistically interprets the material stress reaction examining original results of investigations on inelastic deformations under high cycle cyclic loading and correlating them

with a number of use parameters The limit states of bodies with primary defects and their resistance to fatigue crack propagation are discussed Measurements analysis and real time modelling of operating loads for experimental fatigue life verification are reviewed as well as introducing some new fatigue damage accumulation hypotheses based on dissipated energy Various operating and environmental factors of the fatigue life are analyzed including temperature metal structures corrosive environment stress strain amplitudes and their changes random load strain properties stress gradient frequency mean level etc The work is intended for all those involved in research and development in the metal machine and structure fields

Scientific and

Technical Books and Serials in Print, 1989 Structure and Properties of Ceramics A. Koller, 1994-06-03 Modern ceramic materials differ from the traditional materials which were only based on natural substances It is now possible to prepare ceramics using a wide range of properties and as an area this field has evolved as a very broad scientific and technical field in its own right In practice one encounters ceramics in practically all branches of materials science and the characteristics are so wide ranging that the common basis of these substances is not always immediately apparent All ceramic materials are prepared by ceramic technology and powder substances are used as the initial raw materials Their physical properties are an expression not only of their composition but primarily of their structure Thus in order to fully understand the properties of ceramics a knowledge of their structure is essential This book is intended as a source of such knowledge All the chapters are written by authors with vast experience in the various fields of ceramics who provide a detailed description of the interrelationships between the structure and behaviour of ceramic materials **Atmospheric Deterioration of Technological Materials, a Technoclimatic Atlas** Miroslav Rychtera, 1990 This is the second of a number of volumes presenting a new synthetic approach to the problems of material degradation in different parts of the world The method of deriving atmospheric stress on materials described in Part A is further worked out in Part B to include the details of the calculation procedures involved It is shown that the method originally intended for technological materials only can be used for predicting deterioration of simple constructional parts The degradation processes typical of extreme climates in various parts of the world are compared to those encountered in the temperate climatic zone The author shows how to predict the deterioration of a range of materials used in technology and how to apply the results obtained in order to extend their lifetime and increase their reliability This volume concentrates on the particular environmental conditions prevailing in the Asia Australia and Oceania continent The information is presented in the form of maps each accompanied by a wealth of detailed data giving calculated predictions of the sorption desorption temperature corrosion and microbiological stresses acting upon materials **Theory of Weldability of Metals and Alloys** Ivan Hrivňák, 1992 This book reviews the behaviour of metals and alloys during welding In the first part the heat flow in arc welding processes is discussed The weld thermal cycle is explained in terms of heat input and the geometry of weld and thicknesses to be welded The real welding cycle is described in terms of thermal and strain cycles The weld metal is characterized in terms of fusion stage absorption of gases and stage of metal crystallization and structural transformation The metallurgical background of cracking is described by a full set of crackability tests along with the evaluation of metals from the point of view of crackability Post welding heat treatment is reviewed and includes the relaxation of stresses induced by welding Guidelines are given for the selection of steels for welded structures Several chapters examine the weldability of particular steels including high strength steels stainless steels high alloyed steels cryogenic steels and other metals and alloys The theories are quantified in the form of calculations or computing programmes Readers will find sufficient data for software processing *Composite Systems from*

Resists in Microlithography and Printing B. Bednář, Jaroslav Králíček, Jaromír Zachoval, 1993 Photoresists electron and X ray resists are generally mixtures based on organic polymers and radiation sensitive materials Research and development of these mixtures is complicated and may be solved only in mutual collaboration between organic and physical chemistry polymer chemistry high energy and semiconductor chemistry and physics as well as other branches of science Research projects concerning the development fabrication and application of resists necessitate systematic basic and applied research increased effort on the part of research workers and especially critical evaluation of the facts known to date and experimental results All this has been borne in mind in the writing of this volume the aim of which is to summarize and evaluate recent results of resist investigation and applications Special attention is given to processes influencing the properties and quality of off set plates such as types of substrates and their coating exposure development adhesion to substrate hydrophobicity etc
