Defects And Diffusion In Ivi Compounds:

Defects and Diffusion in II-VI Compounds David Fisher, 1999-08-25 A 10 Year Retrospective **Defects and Diffusion in II-VI Compounds**, 1999 This group of materials tends to be relatively neglected with regard to defect and diffusion studies when compared with the other major semiconductor groups such as the elementals Si Ge and the III V compounds especially GaAs This is reflected by the fact that the volume of diffusion data is smaller than that for the other groups see DDF volumes 153 155 on Si and volumes 157 159 on GaAs Nevertheless MCT HgCdTe here classified as part of the Cd Hg Te system continues to be of great interest and this is reflected by the contents of this volume In particular the first of the original works in this book reviews the topic of diffusion in MCT The other papers discuss the topics of dislocations in molecular beam epitaxial ZnSe layers on GaAs 001 the interdiffusion of Mn and Mg in CdTe based quantum wells again reflecting the importance of the Cd Hg Te system and the transmission electron microscopic study of dislocations in ZnTe GaAs epitaxial heterostructures The general subject of grain boundary diffusion is treated in two papers which consider the grain boundary to be a 3 dimensional structure rather than adopting the traditional view of its being a merely 2 dimensional interface Although the specific system analyzed experimentally here is metallic rather than semiconducting this innovative approach is very likely to be relevant to the boundaries between semiconductors with their relatively complex structures

Widgap II-VI Compounds for Opto-electronic Applications H.E. Rúda, 2013-11-27 This book is intended for readers desiring a comprehensive analysis of the latest developments in widgap II VI materials research for opto electronic applications and basic insight into the fundamental underlying principles Therefore it is hoped that this book will serve two purposes Firstly to educate newcomers to this exciting area of physics and technology and secondly to provide specialists with useful references and new insights in related areas of II VI materials research The motivation for preparing this book originated from the need for a current review of this fertile and important field A primary goal of this book is therefore to present an eclectic synthesis of these sometimes diverse fields of investigation This book consists of three main sections namely 1 Growth and Properties 2 Materials Characterization and 3 Devices Part One presents an overall perspective of the state of the art in the preparation of the widgap II VI materials Part Two concentrates on current topics pertinent to the characterization of these materials from the unique perspective of each of the authors Part Three focuses on advances in the opto electronic applications of these materials The material in this section runs the gamut from addressing recent advances in device areas which date back to some of the earliest reported research in these materials to tackling some quite new and exciting future directions *Diffusion and Defect Data*, 1999 *Narrow-gap II-VI Compounds for Optoelectronic and Electromagnetic Applications* Peter Capper, 1997-10-31 The field of narrow gap II VI materials is dominated by the compound mercury cadmium telluride MCT or $\text{Hg}_{1-x}\text{Cd}_x\text{Te}$ By varying the x value material can be made to cover all the important infrared IR ranges of interest It is probably true to say that MCT is the third most studied semiconductor after silicon and

gallium arsenide As current epitaxial layers of MCT are mainly grown on bulk CdTe family substrates these materials are included in this book although strictly of course they are not narrow gap This book is intended for readers who are either new to the field or are experienced workers in the field who need a comprehensive and up to date view of this rapidly expanding area To satisfy the needs of the first group each chapter discusses the principles underlying each topic and some of the historical background before bringing the reader the most recent information available For those currently in the field the book can be used as a collection of useful data as a guide to the literature and as an overview of topics covering the wide range of work areas

Karl,1985-11 *Defect Interaction and Clustering in Semiconductors* Sergio Pizzini,2002 Modern semiconductor devices
rely upon precise defect engineering On the one hand defects are the components needed to generate the electronic
architecture of the device On the other hand they may if not carefully controlled induce failure of that device During the past
fifty years the electrical and optical properties of defects their generation transport clustering and reactions between them
have been investigated intensively Yet the development of semiconductor technology remains closely connected to the
advances made in defect science and engineering Compared to metals defect control in silicon is significantly complicated by
