Debate About The Earth Approach To Geoph:

Geophysical Abstracts Geological Survey (U.S.),1968 **Debate about the Earth** Hitoshi Takeuchi,Seiya Uyeda,Hiroo Kanamori,1967 **Scientific Discovery: Case Studies** Thomas Nickles,2012-12-06 The history of science is articulated by moments of discovery Yet these moments are not simple or isolated events in science Just as a scientific discovery illuminates our understanding of nature or of society and reveals new connections among phenomena so too does the history of scientific activity and the analysis of scientific reasoning illuminate the processes which give rise to moments of discovery and the complex network of consequences which follow upon such moments Understanding discovery has not been until recently a major concern of modern philosophy of science Whether the act of discovery was regarded as mysterious and inexplicable or obvious and in no need of explanation modern philosophy of science in effect bracketed the question It concentrated instead on the logic of scientific explanation or on the issues of validation or justification of scientific theories or laws The recent revival of interest in the context of discovery indeed in the acts of discovery on the part of philosophers and historians of science represents no one particular methodological or philosophical orientation It proceeds as much from an empiricist and analytical approach as from a sociological or historical one from considerations of the logic of science as much as from the logical or extralogical contexts of scientific thought and practice But in general this new interest focuses sharply on the actual historical and contemporary cases of scientific discovery and on an examination of the act or moment of discovery in situ

U.S. Geological Survey Professional Paper ,1975 **Abstracts of North American Geology** Geological Survey (U.S.),1971-07 *Geological Survey Professional Paper* ,1975 **Mind over Magma** Davis A. Young,2018-06-05 Mind over Magma chronicles the scientific effort to unravel the mysteries of rocks that solidified on or beneath Earth's surface from the intensely hot molten material called magma The first ever comprehensive history of the study of such igneous rocks it traces the development of igneous petrology from ancient descriptions of volcanic eruptions to recent work incorporating insights

from physical chemistry isotope studies and fluid dynamics Intellectual developments in the field from the application of scientific methods to the study of rocks to the discovery of critical data and the development of the field's major theories are considered within their broader geographical social and technological contexts *Mind over Magma* examines the spread of igneous petrology from western Europe to North America South Africa Japan Australia and much of the rest of the world It considers the professionalization and Anglicization of the field detailing changes in publication outlets the role of women and the influence of government funding The book also highlights the significant role that technological developments including the polarizing microscope high temperature quenching furnaces and instrumental analysis have played in the discovery of new data and development of revolutionary insights into the nature of igneous rocks Both an engagingly told story and a major reference *Mind over Magma* is the only available history of this important field As such it will be appreciated by petrologists geochemists and other geologists as well as by those interested in the history of science **Precambrian:**

Conterminous U.S. John C. Reed, Jr., Marion E. Bickford, R.S. Houston, Paul Karl Link, D.W. Rankin, Paul K. Sims, W. Randall Van Schmus, 1993 This wide ranging discussion of Precambrian rocks includes contributions from a diverse array of authors actively engaged in investigations of various aspects of U S Precambrian geology Summary discussions by the editors of the five major chapters place these contributions in a logical regional framework *Bibliography of North American Geology*, 1970 1919 28 cumulation includes material previously issued in the 1919 20 1935 36 issues and also material not published separately for 1927 28 1929 39 cumulation includes material previously issued in the 1929 30 1935 36 issues and also material for 1937 39 not published separately *Drawing the Line* Mark S. Monmonier, 1995 Argues that maps can be manipulated to distort the truth and shows how they have been used for propaganda in international affairs political districting and finding toxic dump sites *Qumran: The Site of the Dead Sea Scrolls: Archaeological Interpretations and Debates* Jean-Baptiste Humbert, Jürgen Zangenberg, 2018-11-01 Today archaeology plays an ever growing role in Qumran studies Fifteen papers presented in 2002 at Brown University provide the necessary data to break new ground in the recent debate about the character of Qumran Section I discusses material from old and new excavations that help assess the validity of the traditional Qumran Essene hypothesis Part II discusses various aspects of the main settlement such as division of space the character of period III the date of the cave scroll deposits and the use of food Part III deals with the Qumran cemetery and a similar graveyard at Khirbet Qazone Part IV places Qumran into a wider regional context concentrating on local agriculture and ceramic production The articles strongly call for a new awareness for archaeological detail and in their various ways instigate a renewed debate about how to bring texts and material culture into a meaningful dialogue **The Continental Drift Controversy** Henry R. Frankel, 2012-04-26 Describes the expansion of the land based paleomagnetic case for drifting continents and recounts the golden age of marine geoscience *Rational Changes in Science* Joseph C. Pitt, Marcello Pera, 2012-12-06 THE PROBLEMS OF SCIENTIFIC RATIONALITY Fashion is a fickle mistress Only yesterday

scientific rationality enjoyed considerable attention consideration and even reverence among philosophers but today's fashion leads us to despise it and the matron rejected and abandoned as Hecuba complains *modo maxima rerum tot generis natisque potens nunc trahor exui inops* to cite Kant for our purpose who cited Ovid for his Like every fashion ours also has its paradoxical aspects as John Watkins correctly reminds in an essay in this volume Enthusiasm for science was high among philosophers when significant scientific results were mostly a promise it declined when that promise became an undeniable reality Nevertheless as with the decline of any fashion even the revolt against scientific rationality has some reasonable grounds If the taste of the philosophical community has changed so much it is not due to an incident or a whim This volume is not about the history of and reasons for this change Instead it provides a view of the new emerging image of scientific rationality in both its philosophical and historical aspects In particular the aim of the contributions gathered here is to focus on the concept around which the discussions about rationality have mostly taken place scientific change
