Decades Of Dioxin:

Feasibility of Removal of Dioxin and Dioxin-like PCB's by Intensive Fishery of Herring and Sprat in the Baltic Sea Nordiska Ministerrådet, 2010 In this report it is discussed and assessed whether it is feasible to reduce dioxin content of herring and sprat in the Baltic Sea by a period of intensified fishery in the region and if intensified fishery causes adverse environmental effects or affects the stocks of other species like cod salmon and other pelagic species The background is the present problems complying with the European Commission limit values for dioxins and dioxin like PCBs in Fish from the Baltic Sea Also flame retardants and other hazardous substances present an increasing quality problem for the fisheries sector

Four Decades On Scott Laderman, Edwin A. Martini, 2013-06-06 In Four Decades On historians anthropologists and literary critics examine the legacies of the Second Indochina War or what most Americans call the Vietnam War nearly forty years after the United States finally left Vietnam They address matters such as the daunting tasks facing the Vietnamese at the war's end including rebuilding a nation and consolidating a socialist revolution while fending off China and the Khmer Rouge and the Vietnam syndrome the cynical frustrated and pessimistic sense that colored America's views of the rest of the world after its humiliating defeat in Vietnam The contributors provide unexpected perspectives on Agent Orange the POW MIA controversies the commercial trade relationship between the United States and Vietnam and representations of the war and its aftermath produced by artists particularly writers They show how the war has continued to affect not only international relations but also the everyday lives of millions of people around the world Most of the contributors take up matters in the United States Vietnam or both nations while several utilize transnational analytic frameworks recognizing that the war's legacies shape and are shaped by dynamics that transcend the two countries Contributors Alex Bloom Diane Niblack Fox H Bruce Franklin Walter Hixson Heonik Kwon Scott Laderman Mariam B Lam Ngo Vinh Long Edwin A Martini Viet Thanh Nguyen Christina Schwenkel Charles Waugh H.R. 1961--Vietnam Veterans Agent Orange Relief Act United States. Crummett,2002 By 1971 analytical scientists at Dow had good reason to believe that questions about dioxin 2 3 7 8 dibenzo p dioxin had been appropriately addressed This molecule had been identified as an unwanted trace contaminant in 2 4 5 trichlorophenol and its derivatives synthesized and analytical standards prepared characterized by all the known measurement techniques and controlled in Dow products by newly developed analytical methods of confirmed integrity at levels 10 times lower than deemed necessary by Dow toxicologists Thus we had not only fulfilled all the requirements of government agencies we had gone the extra mile No other product contaminant had been treated so rigorously There was no doubt that Dow products were safe when used as directed Once again we had proven that molecules could be successfully managed Although there was already some noise decrying this conclusion we were totally unprepared to weather the brouhaha which developed Dioxin appeared to be a molecule that created fear and caused people to do strange unscientific things Was it more than just a molecule We now turned our attention to measuring the amount of dioxin in the environment We were well prepared to develop methodology to do this We had state of the art equipment and some of the best chromatographers and mass spectroscopists in the world We were confident we could find and measure dioxin if present in any matrix of interest at appropriate detection levels Then we could determine how the dioxin got there and discover ways to completely control and manage the presence and movement of this molecule in the environment This was our perception This perception was reinforced by the merger of Dow analytical laboratories For the first time powerful measurement tools would be under the same management as the separation systems This created many opportunities for spectroscopists chromatographers and instrument development folks to do extraordinary things together The resulting laboratory consisting of almost 200 technical people was managed by a technical director and a technical manager I was named technical manager a position without a job description We were not however positioned to communicate effectively with the world outside Dow Those of us working in trace analysis had neither published much nor attended many scientific meetings outside the company We had not honed either our writing or speaking skills So our papers were rejected and we were seldom heard speaking This took some years to correct as we didn t immediately recognize that we needed to have credibility with our peers in academia government and other industry In spite of this naivety on my part I soon found myself serving on committees task forces and study groups both within Dow and with government agencies in the United States and Canada Immediately it became

apparent to me that the integrity of analytical data at trace levels was a major problem. Different laboratories used different principles in the interpretation of signals. Consensus on data interpretation needed to be reached. But of even greater importance was the need to communicate with journalists. Each encounter with peers and others interested in dioxin became a great adventure filled with fun. Often these meetings were humorous, always challenging, sometimes testy. Scientists from industry always were portrayed as biased and even incompetent. So dioxin appeared to cause people to do strange things. By means of anecdotal stories and essays, this book attempts to convey the principal scientific and philosophical lessons learned as well as reveal the astonishing behavior of those contributing to the frustration, agony, and elation experienced by this industrial analytical chemist. Among the surprising lessons learned are 1. Fear can create big business. 2. In a crisis situation, even *Making Data Talk*. David E. Nelson, Bradford W. Hesse, Robert T. Croyle, 2009-05-20. The demand for health information continues to increase, but the ability of health professionals to provide it clearly remains variable. The aim of this book is 1. to summarize and synthesize research on the selection and presentation of data pertinent to public health and 2. to provide practical suggestions based on this research summary and synthesis on how scientists and other public health practitioners can better communicate data to the public policy makers and the press in typical real world situations. Because communication is complex and no one approach works for all audiences, the authors emphasize how to communicate data better and in some instances contrast this with how to communicate data worse rather than attempting a cookbook approach. The book contains a wealth of case studies and other examples to illustrate major points and actual situations whenever possible. Key principles and recommendations are summarized at the end of each chapter. This book will stimulate interest among public health practitioners, scholars, and students to more seriously consider ways they can understand and improve communication about data and other types of scientific information with the public policy makers and the press. Improved data communication will increase the chances that evidence-based scientific findings can play a greater role in improving the public's health. *Congressional Record*. United States Congress, 1999. **Grassroots Rising**, 2006. **Communicating Uncertainty**. Sharon M. Friedman, Sharon Dunwoody, Carol L. Rogers, 1999. Exploring the interactions that swirl around scientific uncertainty and its coverage by the mass media, this volume breaks new ground by looking at these issues from three different perspectives: that of communication scholars who have studied uncertainty in a number of ways; that of science journalists who have covered these issues; and that of scientists who have been actively involved in researching uncertain science and talking to reporters about it. In particular, *Communicating Uncertainty* examines how well the mass media convey to the public the complexities, ambiguities, and controversies that are part of scientific uncertainty. In addition to its new approach to scientific uncertainty and mass media interactions, this book distinguishes itself in the quality of work it assembles by some of the best known science communication scholars in the world. This volume continues the exploration of interactions between scientists and journalists that the three coeditors first documented in their highly successful volume
