for Sustainable Development Gregory E. Kersten, Zbigniew Mikolajuk, Anthony Gar-On Yeh, 2006-03-01 In recent years much work has been done in formulating and clarifying the concept of sustainable development and related theoretical and research issues. Now the challenge has shifted to designing and stimulating processes of effective planning and decision making at all levels of human activity in such a way as to achieve local and global sustainable development. Information technology can help a great deal in achieving sustainable development by providing well designed and useful tools for decision makers. One such tool is the decision support system or DSS. This book explores the area of DSS in the context of sustainable development. As DSS is a very new technique especially in the developing world, this book will serve as a reference text primarily for managers, government officials and information professionals in developing countries. It covers the concept of sustainable development, defines DSS and how it can be used in the planning and management of sustainable development, and examines the state of the art in DSS use. Other interested readers will include students, teachers and analysts in information sciences, DSS designers, developers and implementors, and international development agencies.

Decision Support Systems - Collaborative Models and Approaches in Real Environments Hernandez Jorge, Pascale Zarate, Fatima Dargam, Boris Delibašić, Shaofeng Liu, Rita Ribeiro, 2012-07-26 This book contains extended and revised versions of a set of selected papers from two workshops organized by the Euro Working Group on Decision Support Systems (EWG DSS) which were held in London and Paris in June and November 2011 respectively. The workshop themes were Decision Support Systems and Collaborative Decision Making. The 11 papers were selected from 52 submissions and are representative of the current research in these fields. They address challenges such as conceptual models, software specification and simulation, collaborative requirements specification, as well as multi objective and multi criteria decision making.

Decision Support Systems Chiang Jao, 2010-01-01 Decision support systems (DSS) have evolved over the past four decades from theoretical concepts into real world computerized applications. DSS architecture contains three key components: knowledge base, computerized model, and user interface. DSS simulate cognitive decision making functions of humans based on artificial intelligence methodologies including expert systems, data mining, machine learning, connectionism, logistical reasoning, etc. in order to perform decision support functions. The applications of DSS cover many domains ranging from aviation monitoring, transportation safety, clinical diagnosis, weather forecast, business management to internet search strategy. By combining knowledge bases with inference rules, DSS are able to provide suggestions to end users to improve decisions and outcomes. This book is written as a textbook so that it can be used in formal courses examining decision support systems. It may be used by both undergraduate and graduate students from diverse computer related fields. It will also be of value to established professionals as a text for self study or for reference.

Fusing Decision Support Systems Into the Fabric of the Context Ana Respício, Frada Burstein, 2012 The field of Information Systems has been shifting from an immersion view (AE) which relies on the immersion of information technology (IT) as part of the business environment to a

aefusion viewAE in which IT is fused within the business environment forming a unified fabric that integrates work and personal life as well as personal and public information In the context of this fusion view decision support systems should achieve a total alignment with the context and the personal preferences of users The advantage of such a view is an opportunity of seamless integration between enterprise environments and decision support system components Thus researchers and practitioners have to address the challenges of dealing with this shift in viewpoint and its consequences for decision making and decision support systems theories and applications This book presents the latest innovations and advances in decision support systems with a special focus on the fusion view These achievements will be of interest to all those involved and interested in decision making practice and research as well as more generally in the fusion view of modern information systems The book covers a wide range of topical themes including a fusion view of business intelligence and data warehousing applications of multi criteria decision analysis intelligent models and technologies for decision making knowledge management decision support approaches and models for emergency management and medical and other specific domains
