Decision Support Systems for Business Intelligence Vicki L. Sauter,2014-08-21

Praise for the First Edition This is the most usable decision support systems text i t is far better than any other text in the field Computing Reviews Computer based systems known as decision support systems DSS play a vital role in helping professionals across various fields of practice understand what information is needed when it is needed and in what form in order to make smart and valuable business decisions Providing a unique combination of theory applications and technology Decision Support Systems for Business Intelligence Second Edition supplies readers with the hands on approach that is needed to understand the implications of theory to DSS design as well as the skills needed to construct a DSS This new edition reflects numerous advances in the field as well as the latest related technological developments By addressing all topics on three levels general theory implications for DSS design and code development the author presents an integrated analysis of what every DSS designer needs to know This Second Edition features Expanded coverage of data mining with new examples Newly added discussion of business intelligence and transnational corporations Discussion of the increased capabilities of databases and the significant growth of user interfaces and models Emphasis on analytics to encourage DSS builders to utilize sufficient modeling support in their systems A thoroughly updated section on data warehousing including

architecture data adjustment and data scrubbing Explanations and implications of DSS differences across cultures and the challenges associated with transnational systems Each chapter discusses various aspects of DSS that exist in real world applications and one main example of a DSS to facilitate car purchases is used throughout the entire book Screenshots from JavaScript and Adobe ColdFusion are presented to demonstrate the use of popular software packages that carry out the discussed techniques and a related Web site houses all of the book's figures along with demo versions of decision support packages additional examples and links to developments in the field Decision Support Systems for Business Intelligence Second Edition is an excellent book for courses on information systems decision support systems and data mining at the advanced undergraduate and graduate levels It also serves as a practical reference for professionals working in the fields of business statistics engineering and computer technology

Vector Calculus in Regional Development Analysis Kesra Nermend, 2009-04-29 Methods used for regional development analysis are employed mainly to make forecasts and comparisons Forecasting models of various types e.g. econometric models are usually used for forecasting Recently vector autoregressive models VAR have become popular These models were proposed by Sims in 1980 On the contrary taxonomic methods that are in the center of attention as far as the present publication is concerned are most often employed to make comparisons Linear ordering methods including standard methods are the most popular among taxonomic methods They are based on different distance and similarity measures which leads to the fact that they do not always provide reliable information When for example one construes the standard for a base year and then compares it with data for other years it may turn out that the measure determined will have worse values than the standard for a real object region micro region although this object is better from the standard Hence one must look for new methods employed in regional development analysis or improve hitherto existing ones in such a way so that information obtained reflects the reality to a larger extent The main aim of the present publication is to work out methodological basis for regional development analysis based on vector calculus together with assumptions about computer system supporting the implementation of the method suggested

Soft Computing and its Applications in Business and Economics Rafik Aziz Aliev, Bijan Fazlollahi, Rashad Rafik Aliev, 2012-08-10 Soft Computing and its Applications in Business and Economics or SC BE for short is a work whose

importance is hard to exaggerate Authored by leading contributors to soft computing and its applications SC BE is a sequel to an earlier book by Professors R A Aliev and R R Aliev *Soft Computing and Its Applications* World Scientific 2001 SC BE is a self contained exposition of the foundations of soft computing and presents a vast compendium of its applications to business finance decision analysis and economics One cannot but be greatly impressed by the wide variety of applications applications ranging from use of fuzzy logic in transportation and health case systems to use of a neuro fuzzy approach to modeling of credit risk in trading and application of soft computing to e commerce To view the contents of SC BE in a clearer perspective a bit of history is in order In science as in other realms of human activity there is a tendency to be nationalistic to commit oneself to a particular methodology and relegate to a position of inferiority or irrelevance all alternative methodologies As we move further into the age of machine intelligence and automated reasoning we run into more and more problems which do not lend themselves to solution through the use of our favorite methodology

Decision Sciences and Technology for Globalisation (ISDSI_2008) B.S. Sahaye, Jeet N.D. Gupta, Surinder Batra, Sanjay Kumar, Sushil Kumar, 2008-11-05 It is not uncommon to find books and other publications in the literature dealing individually with the subjects of decision sciences technology and globalisation However there are very few instances of books which integrate these three dimensions in an umbrella framework This publication is one such attempt This book comprises of 58 papers contributed by leading academia from universities and management institutes in India and abroad Many of the contributions have come from USA Canada UK Japan Australia New Zealand UAE Bahrain Taiwan Brazil and Mexico adding to the rich diversity of the thought processes explored in the papers Some of these papers are country specific while some others provide a transnational perspective Also while some papers provide enriched conceptual frameworks in specific disciplines building upon existing frameworks several other papers provide application oriented coverage focused at select organizations or industries further adding unique value to this book There are eight sections in the book namely Supply Chain Management Operations Management Information Systems ICT IT E Business Strategies Business Modeling Global Business Issues Challenges Marketing and Globalisation New Paradigms in Education and Globalisation The issues touched upon by various papers within each section are diverse and yet highly relevant and contemporary We believe this book would

be useful not only to academia research scholars and students of various disciplines of management but also to those in the industry in India and abroad who are seeking conceptual inputs and experience sharing in their respective positions
