Decision Tools for Sustainable Development Ian F. Grant, Chris Sear, 1999 This book brings together up to date techniques for the collection and management of environmental and socioeconomic information It describes practical decisionmaking tools for use at all levels from local to international for rural communities research services the food industry and for institutional decision makers *Multiple Criteria Decision Making for Sustainable Development* Michalis Doumpos, Fernando A. F. Ferreira, Constantin Zopounidis, 2022-01-01 This book presents a rich collection of studies on the analysis of sustainable development from a multiple criteria decision making MCDM perspective written by some of the most prominent authors in the field of MCDM A The book constitutes a unique international reference guide to the analysis measurement and management of sustainability in a multidimensional decision analysis context Chiefly intended for academics and policymakers it reflects some of the latest methodological advances in decision making which are illustrated in real life applications to sustainability related topics in both the private and public sector Architecture & Sustainable Development (vol.1) Magali Bodart, Arnaud Evrard, 2011-07 This book of Proceedings presents the latest thinking and research in the rapidly evolving world of architecture and sustainable development through 255 selected papers by authors coming from over 60 countries *FUZZY DECISION MAKING TOOLS TO SIEVE OUT THE POOR IN NALANDA DISTRICT, BIHAR* Raj Kumar, 2021-03-31 The author is glad to present to the readers the book titled Fuzzy Decision Making Tools to Sieve out the Poor in Nalanda District Bihar The book is all about how to identify and how to aggregate the poor in any given socio economic context or condition using the concept of Fuzzy Logic and Fuzzy Sets This book will serve research students in applied mathematics and it will also be helpful to those who are involved in making socio economic decision to distribute the resources available at their disposal Why and How this book came into Being Decision making over the issue of how to measure poverty has always been the subject of contentious debate for an economist for a government for a statistician for a mathematician or for any socio economic plan Several Decision Methods have been adopted to decide who would be considered poor or who would not For examples i Absolute and Relative Poverty Line Method ii Uni dimension poverty Method iii Income Expenditure Method iv Head Count Ratio HCR v Income Gap Ratio IGR vi Poverty Gap Ratio PGR vii Advance Measure Method Foster Greer Thorbecke Measure Sen Shorrocks Thon measure SST and Sen Index viii Multi dimensional Poverty Approach i Counting Multi dimensional Poverty ii Multi dimensional Poverty Index MPI and iii Capability Approach These above mentioned methods were used at the global level Identification of poor and non poor in India is done based on Uni dimensional model that is to say Income consumption and expenditure model using following experts committee reports i Dandekar and Rath ii Y K Alagh iii Lakdawala iii Suresh Tendulkar Committee iv C Rangarajan Committee Modified Mixed Reference Period MMRP Poverty Line Basket PLB and Socio Economic and Caste Census SECC 2011 BPL Identification in 2015 Nevertheless every state in India is free to set its own standard of method to scale out the

poor The state of Bihar adopted the method of A Score Based Ranking Methodology to identify the poor In Mathematical Modelling context all the above mentioned methods of making decisions fall under Crisp Decision Approach based on Aristotelian logic and Crisp Sets In response to this method of decision making approach fuzzy decision making approach was suggested as a better alternative to the process of poverty measurement method Andrea Cerioli and Sergio Zani were the first one to apply fuzzy logic to poverty assessment in the year 1990 Later Chiappero Martinetti and Qizilbash added the intrinsic vagueness of being poor by using so called membership function for the identification of the poor As the research continued further some more methods were addressed such as Totally Fuzzy TF Totally Fuzzy and Relative TFR Integrated Fuzzy Approach Multidimensional and Longitudinal to apply to identify and aggregate the poor Key Concepts and Techniques This book further develops and introduces a new approach suggesting Multi Criteria Fuzzy Decision making Tools and Fuzzy Set Theory to capture the extent of poverty of households accommodating both the quantitative and qualitative factors such as Roti Food Kapda Clothing Makaan Housing Kaam Job and Samman Social Status and their fourteen respective sub criteria The fuzzification process is carried out by using Pentagonal Fuzzy Numbers PFNs and by introducing Stratified Fuzzy Analytical Hierarchy Process SFAHP Fuzzy poverty categorization is carried out by introducing Fuzzy Sieve Technique FST The judgment and scaling of the criteria and sub criteria are done by adopting participative decision making method interview method based on questionnaires Stratified Fuzzy Analytical Hierarchy Process SFAHP categorizes the group of the poor into five subgroups such as i very poor ii almost very poor iii poor iv rather poor and v non poor Our fuzzy tools and methods are applied to the case study in Nalanda District Bihar India The book also highlights the comparative studies between three models such as Analytical Hierarchy Process AHP Fuzzy Analytical Hierarchy Process FAHP and Stratified Fuzzy Analytical Hierarchy Process SFAHP The final results justify that Stratified Fuzzy Analytical Hierarchy Process SFAHP gives better results in identifying the Poverty Status Special Features Computer Algorithmic approach via MATLAB Programme for 5 X 5 Matrix is given to calculate the fuzzy centre value by using Matlab m file which will minimize the time in carrying out the fuzzification and normalization process to measure poverty status At the end the author shall ever be grateful to the inquisitive researchers and socio economic planners for their valuable suggestions for further improvement of this book DR RAJ KUMAR St Xavier s College of Management and Technology Patna Digha Ashiyan Road 11 Affiliated to AKU Patna Bihar India

Multi-Objective and Multi-Attribute Optimisation for Sustainable Development Decision Aiding Samarjit Kar, Edmundas Kazimieras Zavadskas, Jurgita Antuchevičienė, 2019-09-20 Optimization is considered as a decision making process for getting the most out of available resources for the best attainable results Many real world problems are multi objective or multi attribute problems that naturally involve several competing objectives that need to be optimized simultaneously while respecting some constraints or involving selection among feasible discrete alternatives In this Reprint of the Special Issue 19 research papers co authored by 88 researchers from 14 different countries explore aspects of multi

objective or multi attribute modeling and optimization in crisp or uncertain environments by suggesting multiple attribute decision making MADM and multi objective decision making MODM approaches The papers elaborate upon the approaches of state of the art case studies in selected areas of applications related to sustainable development decision aiding in engineering and management including construction transportation infrastructure development production and organization management

Science and Technology for Sustainable Development Ray, Kuruvilla, George, 2006-05-09 This Book aims at strengthening the scientific basis for sustainable development Scientists are improving their understanding about Nature Technologists are harnessing the potential and resources for economic growth Scientists through increased research can provide efficient techniques for supporting the prudent management of the environment The uses of remote sensing techniques efficient materials application of polymer technology alternative energy forms etc are other topics of discussions included in the book

Sustainable Development Strategies Stephen Bass, Barry Dalal-Clayton, 2012-09-10 This book is a cornerstone resource for a wide range of organizations and individuals concerned with sustainable development at national or local levels as well as for international organizations concerned with supporting such development Whilst the focus is on integrated strategies for sustainable development the approaches and methods covered are equally relevant to poverty reduction environmental and sectoral strategies programme development and review Agenda 21 called for all countries to develop sustainable development strategies For such strategies to be effective there needs to be a real commitment In every country government at all levels the private sector and civil society must work together in a true partnership in transparent ways which enable genuine stakeholder participation The necessary mechanisms and processes need to be coordinated to enable continuous learning and improvement This resource book provides flexible non prescriptive guidance on how to develop assess and implement national sustainable development strategies It sets out principles and ideas on process and methods and suggests how these can be used It is based on an analysis of past and current practice drawing directly from experience in both developed and developing countries Following a discussion of the nature and challenges of sustainable development and the need for strategic responses to them the heart of the book covers the main tasks in strategy processes Individual chapters offer a rich range of guidance ideas and case studies

Sustainability and the U.S. EPA National Research Council, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Incorporating Sustainability in the U.S. Environmental Protection Agency, 2011-09-08 Sustainability is based on a simple and long recognized factual premise Everything that humans require for their survival and well being depends directly or indirectly on the natural environment The environment provides the air we breathe the water we drink and the food we eat Recognizing the importance of sustainability to its work the U S Environmental Protection Agency EPA has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision making at the agency To further strengthen the scientific basis for sustainability as it applies to human health and environmental protection the EPA

asked the National Research Council NRC to provide a framework for incorporating sustainability into the EPA's principles and decision making. This framework, Sustainability and the U.S. EPA, provides recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s. Although risk-based methods have led to many successes and remain important tools, the report concludes that they are not adequate to address many of the complex problems that put current and future generations at risk, such as depletion of natural resources, climate change, and loss of biodiversity. Moreover, sophisticated tools are increasingly available to address cross-cutting complex and challenging issues that go beyond risk management. The report recommends that EPA formally adopt as its sustainability paradigm the widely used three pillars approach, which means considering the environmental, social, and economic impacts of an action or decision. Health should be expressly included in the social pillar. EPA should also articulate its vision for sustainability and develop a set of sustainability principles that would underlie all agency policies and programs.

AI and Data Analytics in Precision Agriculture for Sustainable Development Sita Rani, Soumi Dutta, Álvaro Rocha, Korhan Cengiz, 2025-07-02. This book offers a comprehensive analysis of artificial intelligence (AI) and data analytics in precision agriculture. The integration of technology in agriculture is revolutionizing traditional farming practices, paving the way for sustainability. Precision farming, powered by AI, IoT, and big data, optimizes resource use by enabling real-time monitoring of soil health, weather conditions, and crop growth. Automated irrigation systems and drones reduce water wastage and enhance productivity. Biotechnology advances, such as genetically modified crops and CRISPR gene editing, improve yield, pest resistance, and climate adaptability. Vertical farming and hydroponics offer space-efficient solutions, minimizing land degradation and water consumption. Robotics and autonomous machinery streamline labor-intensive tasks, reducing reliance on chemical inputs. Blockchain ensures transparency in the food supply chain, promoting fair trade and reducing food fraud. Renewable energy sources, like solar-powered farms, further lower agriculture's carbon footprint. By adopting these innovations, farmers can produce more with fewer resources, ensuring food security while preserving the environment. Embracing technology-driven agriculture is crucial for meeting global food demands sustainably, combating climate change, and fostering economic resilience in farming communities. The future of agriculture lies in intelligent, data-driven, and eco-friendly solutions that balance productivity with environmental stewardship.

Decision Support Systems for Sustainable Development Gregory E. Kersten, Zbigniew Mikolajuk, Anthony Gar-On Yeh, 2006-03-01. In recent years, much work has been done in formulating and clarifying the concept of sustainable development and related theoretical and research issues. Now the challenge has shifted to designing and stimulating processes of effective planning and decision making at all levels of human activity in such a way as to achieve local and global sustainable development. Information technology can help a great deal in achieving sustainable development by providing well-designed and useful tools for decision makers. One such tool is the decision support system or DSS. This

book explores the area of DSS in the context of sustainable development As DSS is a very new technique especially in the developing world this book will serve as a reference text primarily for managers government officials and information professionals in developing countries It covers the concept of sustainable development defines DSS and how it can be used in the planning and management of sustainable development and examines the state of the art in DSS use Other interested readers will include students teachers and analysts in information sciences DSS designers developers and implementors and international development agencies

Making Transparent Environmental Management Decisions Keith M. Reynolds,Paul F. Hessburg,Patrick S. Bourgeron,2014-03-10 Since 1997 the Ecosystem Management Decision Support EMDS system has been used around the world to support environmental analysis and planning in many different application areas and it has been applied over a wide range of geographic scales from forest stands to entire countries An extensive sampling of this diversity of applications is presented in section 2 in which EMDS application developers describe the varied uses of the system These accounts together with the requisite background in section 1 provide valuable practical insights into how the system can be applied in the general domain of environmental management

Sustainable Development and Geospatial Technology Chetan Sharma,Anoop Kumar Shukla,Shray Pathak,Vijay P. Singh,2024-09-20 This two volume set showcases the various ways in which geospatial technology can be used to achieve sustainable development goals across different sectors such as urban planning natural resource management

agriculture disaster management and energy management The books provide insights into the potential of geospatial technology in promoting sustainable development practices and addressing challenges related to climate change environmental degradation and socio economic development Both volumes together are a comprehensive guide that showcases the potential of geospatial technology in promoting sustainable development practices across different sectors and will serve as an essential resource for professionals policymakers researchers and students interested in sustainable development and geospatial technology Volume 1 introduces the intertwined realms of sustainable development and geospatial technology It navigates readers through the fundamental principles of sustainable development exploring its goals and the pivotal role geospatial technology plays in its realization Beginning with an overview of these critical concepts it subsequently dives into the core foundations of geospatial technology covering Geographic Information Systems GIS remote sensing spatial data analysis and data visualization The volume also encompasses the practical aspects of sustainable urban planning natural resource management and transportation planning using GIS underpinning the relevance of geospatial technology in addressing contemporary global challenges

Sustainable Cities and Military Installations Igor Linkov, 2013-11-12 Access to reliable and affordable energy water and services is an important determinant of the prosperity

of cities along with effective mission sustainment at military installations The idea for this book was conceived at the NATO Advanced Research Workshop ARW in June 2012 in Hella Iceland The workshop was attended by 50 scientists engineers and policymakers representing 15 different nations and multiple fields of expertise reflecting the global and interdisciplinary nature of climate change and sustainability research The focus of the workshop was on ways in which military installations and small cities can integrate energy water and infrastructure sustainability strategies into city and installation management plans that account for climate change uncertainties The organization of the book reflects major topic sessions and discussions during the workshop Sustainability Concept In Developing Countries Surendra N. Kulshreshtha,2020-05-27

Sustainability Concept in Developing Countries is a collection of seven studies addressing the issue of sustainability from the perspective of developing countries Although it is not a comprehensive review of all developing countries these contributions do portray some of the major issues in achieving sustainability in many developing countries The book is divided into two parts Part 1 includes chapters related to concepts and methodology relevant to sustainability in the context of developing countries Part 2 presents some actual case studies including descriptions of the situations and advice on how to address sustainability in such economies This book is a useful reference for professionals in developing countries as well as other jurisdictions Transdisciplinary Solutions for Sustainable Development Mark Charlesworth,2015-05-15

Global environmental issues such as climate change and species loss are intensifying despite our best efforts to combat them The key reason for this is that the drivers of these problems are closely linked to the industrialism and consumerism that are promoted by governments and other organizations the world over This innovative book identifies the key issues that block progress in sustainable development and proposes transdisciplinary solutions Presenting a review of the epistemology and ethics of this policy field including current policy responses it examines the ethical and policy implications from a multidisciplinary perspective The book explains the current limitations of scientific prediction for global environmental issues and develops innovative approaches to respond to these difficulties drawing out lessons that will make sustainable development policy more democratic plural and open This book will be of great interest to students and researchers in environmental policy development studies politics economics and sustainable development **A Review of Multicriteria**

Assessment Techniques Applied to Sustainable Infrastructure Design Ignacio J. Navarro, Victor Yepes,Jose V. Mart, Given the great impacts associated with the construction and maintenance of infrastructures in both the environmental the economic and the social dimensions a sustainable approach to their design appears essential to ease the fulfilment of the Sustainable Development Goals set by the United Nations Multicriteria decision making methods are usually applied to address the complex and often conflicting criteria that characterise sustainability e present study aims to review the current state of the art regarding the application of such techniques in the sustainability assessment of infrastructures analysing as well the sustainability impacts and criteria included in the assessments Analytic Hierarchy Process is the most frequently

used weighting technique Simple Additive Weighting has turned out to be the most applied decision making method to assess the weighted criteria Although a life cycle assessment approach is recurrently used to evaluate sustainability standardised concepts such as cost discounting or presentation of the assumed functional unit or system boundaries as required by ISO 14040 are still only marginally used Additionally a need for further research in the inclusion of fuzziness in the handling of linguistic variables is identified
