## **Deductive Program Design:**

Deductive Program Design Manfred Broy, 1996-06-18 Advanced research on the description of distributed systems and on design calculi for software and hardware is presented in this volume Distinguished researchers give an overview of the latest state of the art

Logic Programming I. Balbin, K. Lecot, 2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of Symbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography

**The Use of Formal Specification of Software** H.K. Berg, W.K. Giloi, 2012-12-06 The notion that program design is an engineering task alleviating the software crisis has been with us for about a decade With the recognized advantages of obeying to certain software design disciplines we are approaching the era of enforced system development standards which will ensure that end products will meet rigorous design requirements On the one hand advances in system architecture further the application of system development standards to software and firmware design and production On the other hand the growth in complexity of future system architectures in particular distributed systems with their special problems of cooperation and parallelism necessitate the use of rigorous specification and design techniques In addition to hampering the design process the lack of engineering techniques hinders research In many cases trial designs that are presented in abstract and informal terms do not force the designer to face the full problem spectrum and therefore may not sufficiently provide insight into the design process To prepare for the forthcoming discipline and to provide a snapshot view of recent advances in software and firmware engineering we organized in June of 1979 a seminar entitled The Use of Formal Specification of Software and Firmware The seminar took place at the Heinrich Hertz Institute Berlin and attracted over 60 participants most of them from the industry

**Approaches and Applications of Inductive Programming** Ute Schmid, Emanuel Kitzelmann, 2010-03-25

This book constitutes revised papers of the Third International Workshop on Approaches and Applications of Inductive Programming AAIP 2009 held in Edinburgh UK in September 2009 The 7 full papers included in this volume were carefully reviewed and selected The book also contains two invited papers

Foundations of Software Science and Computational

Structures Luca De Alfaro, 2009-03-09 This book constitutes the refereed proceedings of the 12th International Conference on Foundations of Software Science and Computational Structures FOSSACS 2009 held in York UK in March 2009 as part of ETAPS 2009 the European Joint Conferences on Theory and Practice of Software The 30 revised full papers presented together with two invited talks were carefully reviewed and selected from 102 full paper submissions The topics addressed are semantics logics and automata algebras automata theory processes and models security probabilistic and quantitative models synthesis and program analysis and semantics      Modeling Embedded Systems and SoC's Axel Jantsch, 2004 System level design is a critical component for the methods to develop designs more productively But there are a number of challenges in implementing system level modeling This book addresses that need by developing organizing principles for understanding assessing and comparing the different models of computation in system level modeling      Foundations of Software Science and Computation Structures Wolfgang Thomas, 2003-07-31 This book constitutes the refereed proceedings of the Second International Conference on Foundations of Software Science and Computation Structures FOSSACS 99 held in Amsterdam The Netherlands in March 1999 as part of ETAPS 99 The 18 revised full papers presented were carefully selected from a total of 40 submissions Also included are three invited papers The central issues of the papers are theories and methods which support the specification transformation verification and analysis of programs and software systems

Speechreading by Humans and Machines David G. Stork, Marcus E. Hennecke, 2013-11-11 This book is one outcome of the NATO Advanced Studies Institute ASI Workshop Speechreading by Man and Machine held at the Chateau de Bonas Castera Verduzan near Auch France from August 28 to September 8 1995 the first interdisciplinary meeting devoted the subject of speechreading lipreading The forty five attendees from twelve countries covered the gamut of speechreading research from brain scans of humans processing bi modal stimuli to psychophysical experiments and illusions to statistics of comprehension by the normal and deaf communities to models of human perception to computer vision and learning algorithms and hardware for automated speechreading machines The first week focussed on speechreading by humans the second week by machines a general organization that is preserved in this volume After the inevitable difficulties in clarifying language and terminology across disciplines as diverse as human neurophysiology audiology psychology electrical engineering mathematics and computer science the participants engaged in lively discussion and debate We think it is fair to say that there was an atmosphere of excitement and optimism for a field that is both fascinating and potentially lucrative Of the many general results that can be taken from the workshop two of the key ones are these The ways in which humans employ visual image for speech recognition are manifold and complex and depend upon the talker perceiver pair severity and age of onset of any hearing loss whether the topic of conversation is known or unknown the level of noise and so forth

**Identification, Adaptation, Learning** Sergio Bittanti, Giorgio Picci, 1996-07-01 This book collects the lectures given at the NATO Advanced Study Institute From Identification to Learning held in Villa Olmo Como Italy from August 22 to

September 2 1994 The school was devoted to the themes of Identification Adaptation and Learning as they are currently understood in the Information and Control engineering community their development in the last few decades their interconnections and their applications These titles describe challenging exciting and rapidly growing research areas which are of interest both to control and communication engineers and to statisticians and computer scientists In accordance with the general goals of the Institute and notwithstanding the rather advanced level of the topics discussed the presentations have been generally kept at a fairly tutorial level For this reason this book should be valuable to a variety of researchers and to graduate students interested in the general area of Control Signals and Information Processing As the goal of the school was to explore a common methodological line of reading the issues the flavor is quite interdisciplinary We regard this as an original and valuable feature of this book

**Logic of Computation** Helmut Schwichtenberg, 2012-12-06 The Marktoberdorf Summer School 1995 Logic of Computation was the 16th in a series of Advanced Study Institutes under the sponsorship of the NATO Scientific Affairs Division held in Marktoberdorf Its scientific goal was to survey recent progress on the impact of logical methods in software development The courses dealt with many different aspects of this interplay where major progress has been made Of particular importance were the following The proofs as programs paradigm which makes it possible to extract verified programs directly from proofs Here a higher order logic or type theoretic setup of the underlying language has developed into a standard Extensions of logic programming e.g. by allowing more general formulas and or higher order languages Proof theoretic methods which provide tools to deal with questions of feasibility of computations and also to develop a general mathematical understanding of complexity questions Rewrite systems and unification again in a higher order context Closely related is the now well established Gärdenfors basis theory which recently has found interesting applications Category theoretic and more generally algebraic methods and techniques to analyze the semantics of programming languages All these issues were covered by a team of leading researchers Their courses were grouped under the following headings

Batch Processing Systems Engineering Gintaras V. Reklaitis, Aydın Sunol, David W.T. Rippin, Öner Hortacsu, 1996-12-13 Batch chemical processing has in the past decade enjoyed a return to respectability as a valuable effective and often preferred mode of process operation This book provides the first comprehensive and authoritative coverage that reviews the state of the art development in the field of batch chemical systems engineering applications in various chemical industries current practice in different parts of the world and future technical challenges Developments in enabling computing technologies such as simulation mathematical programming knowledge based systems and prognosis of how these developments would impact future progress in the batch domain are covered Design issues for complex unit processes and batch plants as well as operational issues such as control and scheduling are also addressed

**Graph Transformations** Hartmut Ehrig, 2008-08-28 This book constitutes the refereed proceedings of the 4th International Conference on Graph Transformations ICGT 2008 held in Leicester UK in September 2008 The 27 revised full papers

presented together with 5 tutorial and workshop papers and 3 invited lectures were carefully selected from 57 submissions. All current aspects in graph drawing are addressed including hypergraphs and termgraph rewriting applications of graph transformation execution of graph transformations compositional systems validation and verification graph languages and special transformation concepts as well as patterns and model transformations. In addition the volume contains 17 short papers of the ICGT 2008 Doctoral Symposium.

**FM'99 - Formal Methods** Jeannette M. Wing, Jim Woodcock, Jim Davies, 2003-07-31 Formal methods are coming of age. Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations. A transfer of technology into the mainstream of systems development is slowly but surely taking place. FM 99 the First World Congress on Formal Methods in the Development of Computing Systems is a result and a measure of this new found maturity. It brings an impressive array of industrial and applications oriented papers that show how formal methods have been used to tackle real problems. These proceedings are a record of the technical symposium. FM 99 also includes the papers describing applications of formal methods, you will find technical reports, papers and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools. The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia. This session reflects an increasing openness within the international community of researchers and practitioners. Papers were submitted covering a wide variety of formal methods and application areas. The programme committee reflects the Congress's international nature with a membership of 84 leading researchers from 38 different countries. The committee was divided into 19 tracks each with its own chair to oversee the reviewing process. Our collective task was a difficult one: there were 259 high quality submissions from 35 different countries.

**The Pi-Calculus** Davide Sangiorgi, David Walker, 2003-10-16 Graduate text on the  $\pi$  calculus a mathematical model of mobile computing systems.

The 19 revised full regular papers and 5 revised tool presentation papers presented together with 6 invited papers were carefully reviewed and selected from 62 submissions. All current issues on research and development in the area of Petri nets are addressed in particular concurrent systems design and analysis modular systems development formal specification model validation model checking workflow management flow charts networking formal methods in software engineering etc.

The Logic of Software. A Tasting Menu of Formal Methods Wolfgang Ahrendt, Bernhard Beckert, Richard Bubel, Einar Broch Johnsen, 2022-07-04 This Festschrift dedicated to Reiner Hähnle on the occasion of his 60th birthday contains papers written by many of his closest collaborators. After positions at Karlsruhe Institute of Technology and Chalmers University of Technology since 2011 Reiner has been the chaired professor of Software Engineering at Technische Universität Darmstadt where his team focuses on the formal verification of object oriented

software the formal modeling and specification of highly adaptive software systems and formal modeling and analysis in domains such as biological systems and railroad operations His work is characterized by achievements in theory and in practical implementations significant collaborations include the KeY project and the development of the ABS language He has served as chair and editor of important related academic conferences and coauthored almost 200 academic publications The contributions in this volume reflect Reiner s main research focus formal methods in particular applied to software verification

Semantic Techniques in Quantum Computation Simon Gay,Ian Mackie,2010 The study of computational processes based on the laws of quantum mechanics has led to the discovery of new algorithms cryptographic techniques and communication primitives This book explores quantum computation from the perspective of the branch of theoretical computer science known as semantics as an alternative to the more well known studies of algorithmics complexity theory and information theory It collects chapters from leading researchers in the field discussing the theory of quantum programming languages logics and tools for reasoning about quantum systems and novel approaches to the foundations of quantum mechanics This book is suitable for graduate students and researchers in quantum information and computation as well as those in semantics who want to learn about a new field arising from the application of semantic techniques to quantum information and computation

Object-Oriented Technology. ECOOP '98 Workshop Reader Serge Demeyer,Jan Bosch,2003-07-31 At the time of writing mid October 1998 we can look back at what has been a very successful ECOOP 98 Despite the time of the year in the middle of what is traditionally regarded as a holiday period ECOOP 98 was a record breaker in terms of number of participants Over 700 persons found their way to the campus of the Brussels Free University to participate in a wide range of activities This 3rd ECOOP workshop reader reports on many of these activities It contains a careful selection of the input and a cautious summary of the outcome for the numerous discussions that happened during the workshops demonstrations and posters As such this book serves as an excellent snapshot of the state of the art in the field of object oriented programming About the diversity of the submissions A workshop reader is by its very nature quite diverse in the topics covered as well as in the form of its contributions This reader is not an exception to this rule as editors we have given the respective organizers much freedom in their choice of presentation because we feel form follows content This explains the diversity in the types of reports as well as in their lay out

Formal Approaches to Agent-Based Systems James L. Rash,Christopher A. Rouff,Walter Truskowski,Diana Gordon,Michael G. Hinchey,2001-10-10 This book constitutes the thoroughly refereed post proceedings of the First International Workshop on Formal Approaches to Agent Based Systems FAABS 2000 held in Greenbelt MD USA in April 2000 The 22 revised full papers presented together with 13 posters and two panel discussion reports were carefully reviewed and improved for inclusion in the book The papers are organized in topical sections on verifying agents mental states synthesizing agents initially frameworks and formalizations modeling and execution inter agent communication and
